10897 **Curium excretion studies in man and baboon: a predictive animal model.** Cohen, N. (Inst. of Environmental Medicine, New York, NY); Burkart, W.; Lo Sasso, T.; Parkinson, W.W. Jr.; Henley, L.C. *Health Physics;* **44**: No. Sup. 1, 403-409(1983). Contract AC02-76EV03382.

A major rationale for performing metabolic research in laboratory animals is to obtain useful information which is applicable to man. Since it is usually impossible to determine many of the kinetic parameters which are responsible for the fate of a contaminant in inadvertently-exposed individuals, it is essential that well-controlled laboratory experimentation in animals be performed. In the present case, we will demonstrate how our experimental protocol, i.e. curium in the adult baboon, can provide a model from which to derive important characteristics of curium in man. To accomplish this goal, we have compared the retention and excretion patterns of curium in several men accidentally exposed via inhalation, burns, or puncture wounds with that of ^{243,244}Cm citrate injected i.v. in nine adult baboons. Although many of the exposure conditions are different in considering the two primate species (human and nonhuman), biokinetic research in the baboon may serve to estimate tissue burdens and dose commitments in man. Comparison of the excretion rates of the nuclide in the urine of man and the baboon gives similar half times between days 10 and 50 post exposure.

10898 **Measured ^{234,238}U and fallout ^{239,240}Pu in human bone ash from Nepal and Australia: skeletal alpha dose.** Fisenne, I.M. (Environmental Measurements Lab., New York); Perry, P.M.; Chu, N.Y.; Harley, N.A. *Health Physics;* **44**: No. Sup. 1, 457-467(1983). Contract AC02-76ER03077;AC02-80EV10374.

Human bone samples from Nepal and Australia were analyzed for isotopic uranium and fallout plutonium. The Nepalese samples were obtained for a 3-yr period (1976-78) while the Australian samples are representative of a single year (1977). The surface air plutonium concentrations for the latitude bands of these countries were either measured and/or estimated from 1954 through 1978. With the plutonium air concentrations and age-dependent breathing rates as input data, the measured human bone results were compared with skeletal estimates derived from the ICRP Task Group Inhalation Model, and the agreement was found to be reasonably good. The measured isotopic uranium concentrations in these samples provide a benchmark against which to assess fallout plutonium based upon a comparison of the skeletal α radiation dose from a natural actinide to these populations.

10899 **An update of epidemiologic studies of plutonium workers.** Voelz, G.L.; Wilkinson, G.S.; Acquavella, J.F.; Tietjen, G.L.; Brackbill, R.N.; Reyes, M.; Wiggs, L.D. (Los Alamos National Lab., NM). *Health Physics;* **44**: No. Sup. 1, 493-503(1983).

Retrospective and prospective epidemiologic studies are being conducted as part of a national survey of plutonium workers at four Department of Energy facilities (Los Alamos, NM; Rocky Flats, CO; Mound Laboratory, OH; and Savannah River, SC). A preliminary analysis of mortality was done for all white males who have worked at the Rocky Flats Plant during the period 1952-79. The 452 observed deaths were significantly fewer than the 831 expected for all causes. The 107 deaths due to all malignant neoplasms were also derived from age and calender-specific death rates for U.S. white males. Deaths reported for benign and unspecified neoplasms numbered eight versus an expected two, a significant elevation. These tumors, all intracranial, are the subject of a case-control study to be reported later. Subdividing the cohort on the basis of plutonium exposures and external radiation exposures results in similar overall findings. The benign and unspecified neoplasms, however, were not significantly high in the plutonium-exposed group.

10900 **Dose-response relationships for bone cancers from plutonium in dogs and people.** Muggenburg, B.A.; Mewhinney, J.A.; Griffith, W.C.; Hahn, F.F.; McClellan, R.O.; Boecker, B.B.; Scott, B.R. (Lovelace Biomedical and Environmental Research Inst., Albuquerque, NM). *Health Physics;* **44**: No. Sup. 1, 529-535(1983). Contract AC04-76EV01013.

The risk of bone cancers developing from internally deposited plutonium must be estimated from studies in laboratory animals because no plutonium-induced cancers have been observed in people. Studies of the effects of ^{226}Ra and ^{239}Pu injected into beagle dogs at the University of Utah and $^{238}PuO_2$ inhaled by beagle dogs at the Inhalation Toxicology Research Institute provide a key link to understanding the long-term effects of inhaled α-emitting radionuclides in people. Injected radium and plutonium are rapidly deposited in bone whereas plutonium deposited in lung by inhalation is translocated to bone more slowly, depending on its chemical form. The development of bone cancers is a late occurring effect seen after either injection of plutonium or radium or inhalation of plutonium. The incidence of bone cancers from α radiation to the skeletons of dogs was compared to bone cancer incidences in radium dial painters to estimate bone cancer risk from inhaled plutonium in people. A risk factor of 1200 bone cancers/10^6 rad to skeleton (average dose) was estimated.

10901 **Measurement techniques for radium and the actinides in man at the Center for Human Radiobiology.** Toohey, R.E.; Keane, A.T.; Rundo, J. (Argonne National Lab., IL). *Health Physics;* **44**: No. Sup. 1, 323-341(1983). Contract W-31-109-ENG-38.

Various techniques are employed to determine the amounts, retention, and distribution of radioactivity in human subjects in vivo. The principle methods is γ-ray spectrometry with large NaI(Tl) scintillation crystals ("whole-body counting"). There are three primary methods of calibrating the detectors. The first is analytical, in which a rigorous mathematical treatment is employed; the second involves the administration of tracer amounts of radioactivity to human volunteers; the third consists of determining detector response to known amounts of radioactivity in a phantom. For both radium and thorium cases measured in vivo, the interpretation of the results is complicated by the fact that neither radium nor thorium emit γ rays of any consequence. Instead, the observed γ rays result from the decay of ^{214}Bi (RaC) and ^{208}Tl (ThC"), respectively. Since each of these nuclides is preceded in the decay chain by an isotope of the noble gas radon, some of which is exhaled, its activity is not equal to that of the parent radium or thorium. Therefore, breath samples are collected to determine the exhalation rate of the precursor isotope, ^{222}Rn (radon) or ^{220}Rn (thoron). The total body content is then the sum of the γ activity and the exhaled radioactivity, referred to as the retained and emanating fractions, respectively.

10902 **Can information on the gastrointestinal absorption of actinide elements by neonatal rats, guinea pigs, dogs and swine be extrapolated to man?.** Sullivan, M.F.; Gorham, L.S. (Pacific Northwest Lab., Richland, WA). *Health Physics;* **44**: No. Sup. 1, 411-417(1983). Contract AC06-76RL01830.

Administration of ^{238}Pu nitrate to piglets results in absorption that is 1000 times the adult value but neonatal dogs, guinea pigs and rats absorb only 100 times more ^{238}Pu than adults. Neonatal pigs and rats retain as much as 60% of the dose in the gut mucosa for several days but dogs and guinea pigs retain much less. We have also found this difference in GI tract ^{238}Pu retention to occur after inhalation, indicating that the gut is an important route of entry for actinides that are inhaled by neonates. Although retention of different gavaged actinides by suckling rats is within the same range (1-3%) we found retention by piglets to range between 35% for ^{233}U and about 2% for ^{237}Np, ^{244}Cm and ^{241}Am nitrate. While the GI tract of the human infant is probably not nearly as permeable to macromolecules as that of the swine, it is known to be more permeable to macromolecules than that of the adult human. If actinide absorption is also increased in the child, the retention of these elements would probably be more like that in swine than in rats, because of the greater similarity between man and swine in skeletal maturation, in retention of actinides in liver and their longer life span. These studies suggest a need for further information on neonatal absorption of actinides in a large animal species that has a developing GI function more similar to that of humans.

10903 **Plutonium--its behavior in natural water systems and assimilation by man.** Larsen, R.P.; Nelson, D.M.; Bhattacharyya, M.H.; Oldham, R.D. (Argonne National Lab., IL). *Health Physics;* **44**: No. Sup. 1, 485-492(1983).

There are a number of factors which must be considered in establishing whether or not the inadvertent intrusion of a sizable amount of plutonium-bearing material into a natural water system may have a significant impact on the health of those individuals who use that system as a drinking water resource. These factors include the chemical forms(s) and solubility of plutonium in natural waters, its behavior in relation to natural processes (geochemical and biological), its fate in water treatment systems, and its uptake by man from drinking water. From the results obtained in our investigations of the behavior in natural water systems, it appears that (1) the chemical forms of plutonium dissolved in natural waters are Pu(IV) and Pu(V), (2) the soluble plutonium in many waters is bound to the organic constituents which probably enhances plutonium solubility, (3) the natural process responsible for the removal of plutonium from water is adsorption onto sediments, and (4) in water treatment systems, soluble plutonium is oxidized to the VI state and this form is not removed. From our investigations of gastrointestinal absorption, it appears that the value for f_1, the fraction transferred from the gut to blood, is surely greater than 1×10^{-3} and may be as high as 2×10^{-1}. Consideration of these and other factors indicates that, in the event of an accident, the concentration of plutonium could, in certain small natural water systems, approach and perhaps even exceed, the MPC for plutonium. However, the impact on the health of the affected population would not be inordinately high.

10904 **A tissue distribution model for assessment of human inhalation exposures to $^{241}AmO_2$.** Mewhinney, J.A.; Griffith, W.C. (Lovelace Biomedical and Environmental Research Inst., Albuquerque, NM). *Health Physics;* **44**: No. Sup. 1, 537-544(1983). Contract AC04-76EV01013.

A model useful for predicting lung retention and tissue distribution following human inhalation exposure to $^{241}AmO_2$ has been formulated. The model is based on inhalation studies in beagles exposed to either monodisperse or polydisperse aerosols of $^{241}AmO_2$. It also describes lung retention for several cases of accidental human inhalation exposure to ^{241}Am adequately. The model incorporates an expression for solubilization of $^{241}AmO_2$ deposited in lung which is based on physiochemical characteristics of the inhaled particles. Comparison of predictions from this model and those of the International Commission of Radiological Protection in ICRP Publication 30 shows some important differences. Lung retention patterns of inhaled ^{241}Am in dogs and humans after inhalation of $^{241}AmO_2$ are very similar and do not conform with predictions of the ICRP 30 model. Although use of the ICRP 30 model for calculation of annual limits of intake produces similar values to predictions made from our model, a more complete assessment of accidental human exposures to $^{241}AmO_2$ and the risk to individual organs can be made using the retention and dosimetry model formulated from these studies in dogs.

10905 **Bioassay model for estimating body burdens of ^{241}Am from excretion analyses.** Griffith, W.C.; Mewhinney, J.A.; Muggenburg, B.A.; Boecker, B.B.; Cuddihy, B.G. (Lovelace Biomedical and Environmental Research Inst., Albuquerque, NM). *Health Physics;* **44**: No. Sup. 1, 545-554(1983). Contract AC04-76EV01013.

A simple bioassay model for predicting the organ burdens of ^{241}Am from excretion rates is presented for inhalation exposures. The model uses three compartments representing lung, liver and skeleton. The model was developed using data from studies in laboratory animals of inhaled or injected ^{241}Am and was validated for people by comparison to cases of accidental inhalation exposures to ^{241}Am. The data for people have a large amount of variability but indicate that the retention half-time of ^{241}Am in liver is $\sim$ 2 yr and in skeleton is $\sim$ 30 yr. These parameters can be used in the model to estimate body and organ burdens from excretion rates after inhalation of ^{241}Am or the model can be fitted to an individual's measured excretion rates.

10906 **Skeletal retention and distribution of ^{226}Ra and ^{239}Pu in beagles injected at ages ranging from 2 days to 5 years.** Bruenger, F.W.; Smith, J.M.; Atherton, D.R.; Jee, W.S.; Lloyd, R.D.; Stevens, W. (Univ. of Utah, Salt Lake City). *Health Physics;* **44**: No. Sup. 1, 513-527(1983). Contract AC02-76EV00119.

The age at exposure significantly affects the retention and distribution of ^{226}Ra and ^{239}Pu, both of which deposit in the skeleton although in somewhat different patterns. Beagles aged 2 days (neonates), 90 days (juveniles), 18 months (young adults), or 5 yrs (mature) received a single subacute injection of one of these nuclides and were sacrificed serially during a 2-yr interval. Nuclide concentrations in plasma, the skeleton, individual bones and bone sections were determined and retention equations were calculated. The microanatomical skeletal nuclide distribution was studied after fission track or conventional autoradiography. Elimination of ^{239}Pu and its translocation from bone surfaces to the bone volume caused by bone growth and turnover processes were measured. Average radiation doses and dose rates as a function of age at exposure were determined. Initial uptake and retention, skeletal nuclide concentration, proliferative activity of local cell populations and residence time of the nuclide on skeletal surfaces were affected significantly by age at exposure. The effect of these parameters on tumor induction is discussed. This study has provided early retention and distribution data which together with data from a chronic toxicity study will be used to estimate the risk of Pu exposure relative to that of Ra to humans of all ages.

10907 **Radiobiology of pions at LAMPF.** Raju, M.R.; Tokita, N. (Los Alamos National Lab., NM). *International Journal of Radiation Oncology, Biology and Physics;* **8**: No. 12, 2133-2136(Dec 1982).

Recent radiobiology data for pion beams used in therapy are presented. The biological systems used were cultured cells suspended in gelatin and intestinal crypt assays. The importance of fast neutrons from pion stars in large treatment volumes is discussed. The data for compensating the depth dose distribution to produce uniform cell killing across the peak region are presented. The changes in biological effectiveness with peak width for pion beams (unlike heavy ions) are small because of fast neutron contribution from pion stars. The need for innovative radiobiology programs to guide high-LET radiotherapy is discussed.

10908 **Molecular and cellular radiobiology of heavy ions.** Tobias, C.A.; Blakely, E.A.; Alpen, E.L.; Castro, J.R.; Ainsworth, E.J.; Curtis, S.B.; Ngo, F.Q.H.; Rodriquez, A.; Roots, R.J.; Tenforde, J. (Lawrence Berkeley Lab., CA). *International Journal of Radiation Oncology, Biology and Physics;* **8**: No. 12, 2109-2120(Dec 1982). Contract AC03-76SF00098.

Quantitative studies at the BEVALAC have demonstrated some of the physical and radiobiological factors that promise to make accelerated heavy ions important for the therapy of cancer. The measured physical dose-biological effect relationships allow the safe and effective delivery of therapeutic schedules of heavy ions. Among the charged particle beams available, carbon, neon and helium ions in the "extended Bragg peak mode" have optimal physical and biological effectiveness for delivery of therapy to deep seated tumors. The depth-dose profiles of these beams protect intervening and adjacent tissues as well as tissues beyond the range of the particles. For the treatment of hypoxic tumors, silicon and argon beams are being considered because they significantly depress the radiobiological oxygen effect in the region of the extended Bragg ionization peak. The depth-effectiveness of the argon beam is somewhat limited, however, because of primary particle fragmentation. Silicon beams have a depth-dose profile which is intermediate between that of neon and argon, and are candidates to become the particle of choice for maximizing high LET particle effects. Heavy accelerated ions depress enzymatic repair mechanisms, decrease variations of radiosensitivity during the cell division cycle, cause greater than expected delays in cell division, and decrease the protective effects of neighboring cells in organized systems. Near the Bragg peak, enhancement of heavy particle effects are observed in split dose schedules. Late and carcinogenic effects are being studied. With the newly developed Repair-Misrepair theory we can quantitatively model most observations.

10909 **Pion radiotherapy at LAMPF.** Bush, S.E.; Smith, A.R.; Zink, S. (Univ. of New Mexico, Albuquerque). *International Journal of Radiation Oncology, Biology and Physics;* **8**: No. 12, 2181-2186(Dec 1982).

Clinical investigations of pi meson radiotherapy were conducted by the Cancer Research and Treatment Center of the University of New Mexico and the Los Alamos National Laboratory from 1974 until 1982. Two hundred and thirty patients have been treated for a variety of locally advanced primary and metastatic neoplasms. One hundred and ninety-six patients have been followed for a minimum of 18 months. Crude survival data range from 11% for unresectable pancreatic carcinoma to 82% for Stages C and D1 adenocarcinoma of the prostate. Acute tolerance of normal tissues is approximately 4500 pion rad in 36 fractions over 7 weeks. Severe chronic reactions have appeared with increasing frequency after doses in excess of 4000 pion rad.

10910 **In vivo radiobiology of heavy ions.** Phillips, T.L. (Univ. of California, San Francisco); Ross, G.Y.; Goldstein, L.S.; Ainsworth, J.; Alpen, E. *International Journal of Radiation Oncology, Biology and Physics;* **8**: No. 12, 2121-2125(Dec 1982). Contract AC03-76SF01012.

The radiobiology of heavy charged particles has been investigated with various animal systems in vivo at the Lawrence Berkeley Laboratory using the helium beam from the 184″ synchrocyclotron and the carbon, neon, and argon beams from the BEVALAC. Tumor experiments were carried out using the R_1 sarcoma in rats and the EMT6 mouse mammary carcinoma, comparing X rays, carbon ions, neon ions, and argon ions. In vivo normal tissue experiments have been carried out with a wide range of tissues including testis, bone marrow, intestinal crypt cells, lens of the eye, esophagus, lung, and the spinal cord. The induction of dominant lethal mutations after irradiation of the testis was assayed by in vivo embryo culture after in vivo irradiation. Experiments were also done with the Harderian gland tumor induction system.

10911 **Dosimetrie bij totale lichaams bestraling. (Dosimetry with total body irradiation).** Meijer, H. Amsterdam, Netherlands; Amsterdam University (1982). 60p. (In Dutch). Available from Library, KNAW, Kloveniersburgwal 29, 1011 JV Amsterdam (NL).

This report describes an investigation into dosimetry with total body irradiation as used in the treatment of leukemia. A number of aspects of this irradiation technique complicate dosimetry. For instance, the large radiation field required demands a particular geometry for setting up the equipment which is described. In the experiment, in-vivo dosimetry was simulated using an antropomorphic phantom and both LiF thermo-luminescent and Si semiconductor dosimeters. The characteristics of these dosimeters are described, including a study of the theoretical and experimental energy dependence. The measured radiation doses in the pelvis, head and lungs are presented and a protocol is given for radiation doses in the clinical situation. The report is concluded with an appendix of definitions of the principal physical quantities found in the report. (C.F.).

10912 **Simultaneous detection of changes in chromosome number, gene conversion and intergenic recombination during mitosis of Saccharomyces cerevisiae: spontaneous and ultraviolet light induced events.** Esposito, M.S.; Maleas, D.T.; Bjornstad, K.A; Bruschi, C.V. (Lawrence Berkeley Lab., Berkeley, CA). *Current Genetics;* **6**: 5-11(1982). Contract AC03-76SF00098.

A hyperhaploid strain of Saccharomyces cerevisiae disomic for chromosome VII was used to monitor spontaneous and ultraviolet light induced restitution of haploidy (chromosomal loss and/or nondisjunction), mitotic gene conversion and mitotic intergenic recombination. The disomic chromosomal pair incorporates six heterozygous markers, including cyh2/sup r/, distributed on both sides of the centromere. Cycloheximide resistant segregants of spontaneous origin were analyzed to calculate the spontaneous mitotic rates of restitution of haploidy, intergenic recombination and gene conversion that result in expression of the cyh2/sup r/ mutation. Restitution of haploidy was found to be the most common source of spontaneously arising cycloheximide resistant segregants. In constrast, those induced by ultraviolet light resulted most frequently from gene conversion of CYH2/sup s/ to cyh2/sup r/. The chromosome VII hyperhaploid system provides a sensitive method to detect the aneugenic and recombinagenic effects of suspect chemical and physical agents.

10913 **Advies inzake categorieen voedselbestraling. (Advice concerning categories of food irradiation).** Leidschendam, Netherland; Ministerie van Volkagezondheld en Milieuhygiene (1981). 53p. (In Dutch). Available from Library, KNAW, Kloveniersburgwal 29, 1011 JV Amsterdam.

This report is the result of an investigation into the acceptability of using 3 kGy radiation doses for food irradiation without having to test every product for wholesomeness. Criteria for the acceptability can be developed, thus avoiding costly and time consuming investigations by the combination of radiochemical calculations and morphological analogy. If sufficient data are available on the chemical composition of food items cleared by "classical" wholesomeness testing, the radiochemical approach may contribute considerably to assess the acceptability of analogous food products or of the same food products under different radiation conditions. However, the chemical and morphological compositions of the food first have to be determined accurately, and a number of recommendations are presented for the properties to be included in the description of foodstuffs.

5602 Thermal Effects

REFER ALSO TO CITATION(S) 10754, 10848

10914 **(PB—83-264523) Thermal effects on bluegill hematology. Final report.** Murray, S.A. (Tennessee Valley Authority, Muscle Shoals, AL (USA). Office of Natural Resources). Mar 1983. 54p. NTIS, PC A04/MF A01.

Temperature effects on hematological responses of adult bluegill were examined for constant vs fluctuating temperature regimes, for ambient vs high temperature, and for intake vs discharge at an operating power plant. Multivariate statistical methods were used to determine temperature effects. An increased erythrocyte fragility was associated with fluctuating temperature regimes as well as with the suboptimal temperature regime. Thrombocytosis with a concomitant leukopenia was observed for the higher fluctuating and higher acclimating temperatures. Reduced erythrocytic sedimentation rates were observed for the higher temperatures. Although hematology may vary depending on fish size, good hematological indicators of potential thermal stress were associated with red blood cell morphology, particularly cell size and/or shape. However, in situ hematological responses of bluegill at an operating

power plant were apparently not affected by the associated thermal gradients.

10915 **Picosecond fluorescence kinetics in spinach chloroplasts at low temperature.** Reisberg, P.; Nairn, J.A.; Sauer, K. (Lawrence Berkeley Lab., Univ. of California, Berkeley). *Photochemistry and Photobiology;* **36**: 657-661(1982). Contract AC03-76SF00098.

At 77K the fluorescence from spinach chloroplasts excited using picosecond mode-locked laser pulses at 620 nm is made up of 5 separate kinetic components. Three of these are predominant at short wavelengths, between 650 and 690 nm, and they appear to correspond to the 3 decay phases seen at room temperature. The 2 new components, a 100 ps rise and a 3000 ps decay, characterize the longer (730-770 nm) wavelength fluorescence. The temperature dependence of the kinetic components of the long wavelength fluorescence shows that the 3000 ps decay accounts for essentially all of the large increase in fluorescence yield observed at low temperature. Furthermore, it appears that this increase does not result entirely from an increase in the fluorescence lifetime, as has been proposed. The dependences of these 2 new components (the 100 ps rise and 3000 ps decay) on emission wavelength and temperature are similar enough to suggest they have a common origin, presumably the chlorophyll pigment component C705. The amplitudes (yield/lifetime) of these 2 phases are approximately equal, and they are opposite in sign. Thus, we see evidence of time-resolved excitation transfer from those pigment molecules that absorb the 620 nm radiation to those that give rise to the long wavelength fluorescence at low temperature.

5603 Chemicals Metabolism And Toxicity

REFER ALSO TO CITATION(S) 9287, 9316, 9317, 9318, 9319, 9347, 10649, 10653, 10657, 10742, 10742, 10762, 10768, 10843, 10844, 10848

10916 **(BNL—51729) Biological effects summary report di(2-ethylhexyl) sebacate.** Silverstein, B.D.; White, O. Jr.; Brower, J.E.; Bernholc, N.M. (Brookhaven National Lab., Upton, NY (USA)). Oct 1983. Contract AC02-76CH00016. 13p. NTIS, PC A02/MF A01. Order Number DE84005624.

An evaluation of the health effects of di(2-ethylhexyl) sebacate (DEHS) was made to assess its potential use as substitute for di(2-ethylhexyl) phthalate (DEHP), which is used as a test aerosol in quantitative fit testing of respirators. A review of published and unpublished information on toxicity of DEHS was made. The limited amount of data on DEHS indicated that it has a low level of toxicity to laboratory animals. No oral or inhalation toxicity studies on humans were found, but skin sensitization and irritation studies were negative. Insufficeint data exists at present to permit determination of DEHS carcinogenicity. Because of structural similarities of DEHS to DEHP and di(ethylhexyl) adipate, and because these latter two materials have been shown to be carcinogenic in rats and mice, DEHS is not recommended at this time as a DEHP substitute until lack of its carcinogenic potential is confirmed.

10917 **(CONF-831258—3) DNA target sites associated with chemical induction of dominant-lethal mutations and heritable translocations in mice.** Generoso, W.M.; Cain, K.T.; Cornett, C.C.; Cacheiro, N.L.A. (Oak Ridge National Lab., TN (USA)). 1983. Contract W-7405-ENG-26. 19p. NTIS, PC A02/MF A01. Order Number DE84004544.

From 15. international congress of genetics, satellite symposium on mutagenesis: basic and applied; Darbhanga, India (22 Dec 1983).

In male meiotic and postmeiotic germ cells certain alkylating chemicals induce both dominant lethals and heritable translocations effectively while others induce primarily dominant lethals. Production of these two endpoints appears to be determined by the stability of alkylation products in chromosomes. If reaction products are intact in male chromosomes at the time of sperm entry, they maybe repaired in fertilized eggs, or else, they persist to the time of pronuclear chromosome replication and lead to chromatid-type aberrations and lethality. Production of heritable translocations, on the other hand, requires a transformation of unstable alkylation products into suitable intermediate lesions. These are then converted into chromosome exchanges (both symmetrical and asymmetrical) after sperm enters the egg but prior to the time of pronuclear chromosome replication (i.e., chromosome-type aberration). Thus, dominant lethals result from both chromatid- and chromosome-type aberrations while heritable translocations result primarily from the latter type. Heritable translocations appear to be associated with alkylation at the nitrogen positions and dominant lethals with alkylation at various sites, including nitrogen and oxygen of bases and of the phosphate backbone.

10918 **(CONF-8310240—1) Acid rain and tree physiology: an overview of some possible mechanisms of response.** McLaughlin, S.B. (Oak Ridge National Lab., TN (USA)). 1983. Contract W-7405-ENG-26. 10p. NTIS, PC A02/MF A01. Order Number DE84003323.

From Symposium on air pollution and the productivity of the forest; Washington, DC, USA (4 Oct 1983).

Portions are illegible in microfiche products.

Several concepts which should be considered in addressing likely mechanisms by which acid deposition and air pollution in general can affect plant productivity are briefly discussed. These include: (1) multiple components of natural terrestrial systems may be affected; (2) plant response must be examined from a whole-plant perspective; (3) sensitivities of shoots and roots may differ markedly; (4) changing environmental availability and potential phytotoxicity of several trace elements should be examined; and (5) air pollution constitutes only one of many stresses which may contribute to forest declines. 6 references, 3 figures, 2 tables. (ACR)

10919 **(CONF-8310242—1) Role of toxicological interactions in chemical carcinogenesis.** Witschi, H. (Oak Ridge National Lab., TN (USA)). 1983. Contract W-7405-ENG-26. 17p. NTIS, PC A02/MF A01. Order Number DE84003322.

From 2. international meeting of chemical carcinogenesis: xenobiotics and biotransformation; Alghero, Italy (11 Oct 1983).

Toxicological interactions may occur not only when exposure to two or more chemicals is simultaneous, but also when exposures are separated in time. Often the sequence of exposure determines the nature of the toxicological response. This is illustrated with the two hindered phenolic antioxidants, butylated hydroxytoluene (BHT) and butylated hydroxyanisole (BHA). Evidence available suggests that in certain tissues exposure to BHT first and then to a carcinogen is without significant consequences, whereas exposure to BHT after a carcinogen may enhance tumor formation. On the other hand, exposure to BHA before carcinogen administration often has a protective effect, whereas exposure to BHA after a carcinogen sometimes protects and sometimes is without any influence. Mechanisms underlying these interactions may be induction of mixed function oxidases, production of cell hyperplasia or other, as yet ill-defined, events such as modification of biological reactivity.

10920 **(DOE/ER—0185) Research in progress: FY 1984. Summaries of projects sponsored by the Office of Health and Environmental Research.** (USDOE Office of Energy Research, Washington, DC. Office of Health and Environmental Research). Dec 1983. 428p. NTIS, PC A19/MF A01. Order Number DE84004219.

This report provides a compilation of summaries of the research projects supported by the Office of Health and Environmental Research (OHER) during Fiscal Year 1984. OHER is a component of the Office of Energy Research within the US Department of Energy, responsible for developing a comprehensive understanding of the health and environmental effects of energy technology development and use as well as other Departmental operations. The OHER program is broad in scope and diverse in character with substantial commitments to both applied and basic research. The research projects have been organized to reflect the major themes and focus of the OHER program. Each research category is preceeded by a short narrative to provide some perspective of the scope of activities which follow. Within each research category, the summaries are organized by efforts performed in DOE laboratories (onsite laboratories) and those performed elsewhere (offsite contractors) to help characterize their respective role in the program. The compilation of project titles and summaries, despite its volume, is still a relatively superficial source of information. It does not provide a sound basis for considering program quality or even relevance.

10923 **(KHM-TR—62) Effects of coal and oil fly ash on sister chromatid exchange (SCE) in a macrophage like cell line.** Andersen, O. (Statens Vattenfallsverk, Vaellingby (Sweden). Projekt KOL-HAELSA-MILJOE). Feb 1983. 33p. NTIS (US Sales Only), PC A03/MF A01. Order Number DE83751382.

The present study attempted direct measurements of genotoxic effects of particulate coal and oil combustion products using the $P388D_1$ macrophage cell line. The capability of these cells for phagocytosis was demonstrated using insoluble particles. The SCE (sister chromatid exchange) test was used for measuring genotoxic effects. The $P388D_1$ cell line does not metabolize latent organic carcinogens. A sample of precipitated coal fly ash (from an electrostatic precipitator downstream of a cyclone at an electricity generating plant burning pulverized coal) had a clear increasing effect on SCE in $P388D_1$. Emission samples taken with impactor sampler after a dilution probe using controlled cooling of the flue gas were obtained from 2 oil fired and 2 coal fired plants. At one of the coal fired plants the particle emission was size fractionated (< 3 um and > 3 um). The only sample increasing SCE significantly was the sample < 3 um from a coal fired plant. The two other coal fired samples had a weak (not statistically significant) effect on SCE. The two samples from oil fired plants did not increase SCE. The results obtained with the size fractionated emission from a coal fired plant indicate that the fraction with particle size < 3 um may contain potentially carcinogenic compounds, and that the smaller particles are most genotoxic, in agreement with other studies. This emphasizes the importance of size fractionation during sampling of particulate air pollution, since biologically important genotoxic effect of the respirable part of emissions may be diluted and thus underestimated or even remain undiscovered when total samples are assayed.

10924 **(KHM-TR—64) Effects of metal compounds on chromosome length.** Andersen, O. (Statens Vattenfallsverk, Vaellingby (Sweden). Projekt KOL-HAELSA-MILJOE). Mar 1983. 42p. NTIS (US Sales Only), PC A03/MF A01. Order Number DE83751389.

Summary in Danish.

In the present report spindle-inhibiting effects in human perihereal lymphocytes after in vitro exposure to coal fly ash and to compounds of heavy metals often present in coal fly ash has been sought evaluated indirectly by chromosome length measurements. The results demonstrated that the reduction in average chromosome length induced by invitro exposure to Cdsup ++ and Hgsup ++ are transient, and during long-time exposures prevented, most likely by induction of metallothionein and intracellular complex formation. The effects of CH_3Hgssub + on chromosome length is stable for a considerable period of time, suggesting that intracellular CH_3Hgsup + is not detoxified by metallothionein complex formation. These compounds, as well as organic and inorganic lead compounds, Nisup ++, Cosup ++, Mnsup ++, As_{O_3}- and Se_{O_3}-- significantly - changed chromosome length distributions toward smaller average chromosome length, indicating spindle-inhibiting effects. In vitro exposure to coal fly ash from an electrostatic precipitator induced a dose-dependent reduction in average chromosome length, and a large number of C-mitoses were observed on slides from fly ash treated cultures, not exposed to colchicin, indicating spindle-inhibiting effects. Both the metal content of single coal fly ash particles and the dose retained in different cells after in vitro exposure to fly ash have been demonstrated to vary considerably. Thus, it is possible that coal fly ash deposited in the lungs may be able to affect the spindle function in target cells. A systemic effect seems unlikely although additive or synergistic effects due to complex exposures or simultaneous exposures through different routes cannot be excluded.

10925 **(KHM-TR—81) Kidney injuries and cadmium. Riskestimation concerning kidney injuries due to cadmium exposure.** Holmberg, I. (Statens Vattenfallsverk, Vaellingby (Sweden). Projekt KOL-HAELSA-MILJOE). Mar 1983. 60p. (In Swedish). Statens Vattenfallsverk, Vaellingby, Sweden, Projekt KOL-HAELSA-MILJOE.

A model system has been employed to study cadmium generated minor tubular kidney injuries. The system consists of three sub-models: A metabolic model that describes the accumulation of cadmium, primarily in the kidney cortex, a distribution model that describes how the cadmium concentration varies among individuals, and, finally, a risk-model that relates critical concentrations of cadmium to the risk of an injury to the kidney. At this stage of the investigation it has not been possible to acquire any quantitative information concerning the relation between use of coal and its direct and indirect effect on the presence of cadmium in the environment. The different levels of daily cadmium intake have been chosen so as to represent, in the model calculations, a possible range of variation. The number of injuries at different levels of the daily intake of cadmium and for certain specified risk-groups has been calculated. The increase in the absorption of cadmium in the G.I. tract, caaused by anemia, appears to be of great importance for the frequency of injuries. Smokers have a 10 to 30 per cent higher frequency of injuries than non-smokers. A yearly increase in the cadmium intake of 1 per cent will, in the long term, lead to a two to three times as large increase in the average frequency of injuries. Both direct and indirect effects of an increased use of coal as an energy source will have only a minor impact on the environment according to the studies. To this contributes not only the use of relatively pure coal, but also the very strong demands on the purification of the smoke outlets.

10926 **(LA-UR—83-3583) Particulate oil shale inhalation and pulmonary inflammatory response in rats.** Wilson, J.S.; Holland, L.M.; Halleck, M.S.; Martinez, E.; Saunders, G. (Los Alamos National Lab., NM (USA)). 1983. Contract W-7405-ENG-36. 23p. (CONF-8309189—1). NTIS, PC A02/MF A01. Order Number DE84004319.

From 11. international congress on occupational health in the chemical industry; Galgary, Canada (26 Sep 1983).

This experiment detrimetal that long-term inhalation of shale dusts by rats elicits a limited inflammatory response in the lung less profound than that observed in animals exposed to equivalent levels of quartz alone. This observation suggests that organic and inorganic constituents of shale may provide a protective effect. The implications for fibrogenic disease are two-fold: (1) inhalation of oil shale dusts appeared to be less detriemtal than the inhalation of quartz along, and (2) there was no apparent synergistic action of quartz and the complex of organic materials present in shale. Animals exposed to shale dusts failed to develop any significant lung lesions, while all of the animals exposed to quartz developed granulomas and some frank fibrosis.

10927 **(NP—4770114) Liver alterations in halogenated hydrocarbons intoxication during hyperventilation therapy.** Gellert, J. (Duesseldorf Univ. (Germany, F.R.). Medizinische Fakultaet). 1980. 106p. (In German). NTIS (US Sales Only), PC A06/MF A01. Order Number DE84770114.

Portions are illegible in microfiche products.

Within the scope of the present study 22 patients were investigated, who came to stationary treatment after oral uptake or inhalation of different halogenated alipathic hydrocarbons. In all patients a CO_2-induced hyperventilation treatment was performed in order to increase pulmonary elimination of the toxic substances. The lethality rate of little below 7% clearly ranges below the rate of 50% observed under conventional treatment. Over the whole

period of treatment the enzyme activities of GOT, GPT, G1DH, AP, LAP and GGT were determined in serum samples. During the first 14 d characteristic activity curves resulted for the individual intoxications; transaminases and glutamate dehydrogenases resulted to be markers applicable for evaluating the course of the treatment. In 18 patients the liver could be examined histologically after the hyperventilation therapy had been finished. In 4 patients the liver was examined with an electron microscope. The results of the biochemical, histologic and electrone-microscopic examinations show that serious liver damages due to intoxication with halogenated hydrocarbons may be prevented by performing a CO_2-induced hyperventilation therapy, if the therapy can be carried out over a sufficient period and the liver has not been damaged in advance.

10928 **(NP—4770116) Acid rain and damage in forestry.** (Gesamtverband des Deutschen Steinkohlenbergbaus, Essen (Germany, F.R.)). Apr 1983. 152p. (In German). NTIS (US Sales Only), PC A08/MF A01. Order Number DE84770116.

Portions are illegible in microfiche products.

In general, the co-action of various air contaminations (synergism) is mentioned as the cause of damage in forests. The joint occurrence of air pollutants (e.g. SO_2, ozone, acid rain) leads to damaged leaf surfaces in conifers and deciduous trees resulting in an eluviation of the trace elements Mg or K. According to the view held by the Gesamtverband, the participation of individual or of the total of airborne pollutants cannot be regarded as the only cause of forest mortality. They think that other components like e.g. diseases, soil conditions, fungus infestations, drought years and mono-cultures, are just as responsible.

10929 **(NP—4770117) Studies of mercury content of indoor air, blood and urine in clinical and medical dental practice.** Hamm, M. (Muenchen Univ. (Germany, F.R.). Fachbereich Medizin). 7 Oct 1982. 115p. (In German). NTIS (US Sales Only), PC A06/MF A01. Order Number DE84770117.

Portions are illegible in microfiche products.

In 4 patient groups comprising in total 96 persons (37 assistants, 29 dentists in private practice, 10 assistant dentists and students from the Ambulant Clinic for Dental Maintenance and Paradontology and 20 control persons) whole blood samples and spontaneous urine samples were investigated for Hg contamination. In addition, the Hg concentrations in the dentists' surgeries were measured. It has to be noted that the indoor concentration measurements were performed under normal treatment conditions at the breathing level of dentist and assistants. These concentrations mostly ranged between 3 and 12 $\mu g\ Hg/m^3$ air and were present at this level only for a short time during the administration of fillings. The Hg mean values of the urine referred to creatinine found in the assistants, were 3.5+-1.7 μg Hg/g creatinine and thus ranged slightly above the control group which provided 2.8+-1.5 μg Hg/g creatinine; for the dentists a mean value of 2.3+-0.7 μg Hg/g creatinine and for the students 2.1+-2.0 μg Hg/g creatinine was measured. The Hg values in the spontaneous urine samples of assistants and dentists were approximately 4.4 μg Hg/l urine (average) and thus were slightly increased compared to those found in the control persons whose mean value was 4.1+-1.1 μg Hg/l urine.

10930 **(NP—4770118) Systematic studies of the effect of aggressive gases on sprucewood.** Besold, G. (Muenchen Univ. (Germany, F.R.)). 19 Jul 1982. 146p. (In German). NTIS (US Sales Only), PC A07/MF A01. Order Number DE84770118.

Portions are illegible in microfiche products.

Sprucewood bars were treated over a period of 336 days with formaldehyde, ammonia, sulfur dioxide, and chlorine with due consideration of practical parameters. By three extraction stages (water, ethanol-benzol, alkali), decomposition products of the wood components were extracted and, finally, the wood residues and extracts analysed. Besides the long-time experiments sorption tests were carried out giving information on the course of sorption in relation to time and the humidity of the wood and yielding defined samples for physico-mechanical investigations. Summing up the results obtained, the treatment with formaldehyde, ammonia, sulfur dioxide and chlorine provokes the following modifications in the cell wall components: - CH_2O: slight decomposition of polyoses; cross-linking reactions in the polysaccharide sector, thereby increase in the degree of polymerization and tensile strength, - NH_3: decomposition of lignin; stabilization of polyoses and alterations in the crystalline cellulose sector account for an increase in the elasticity modul and tensile strength, - SO_2: marked decomposition of polyoses and, to a small extent, of cellulose; decomposition of lignin; the tensile strength is considerably reduced by the long-term action, - Cl_2: very marked decomposition of polyoses and lignin and strong decomposition of cellulose accounting for a substantial decrease in the degree of polymerization and tensile strength. With the aid of the investigation results it was possible to set up an investigation and evaluation diagram.

10931 **(NUREG/CR—3477) Concentrations of copper-binding proteins in livers of bluegills exposed to increased concentrations of soluble copper.** Harrison, F.L.; Lam, J.R. (Lawrence Livermore National Lab., CA (USA)). Sep 1983. Contract W-7405-ENG-48. 27p. (UCRL—53487). NTIS, PC A02/MF A01. Order Number DE84005146.

We conducted experiments to determine the concentrations of copper in effluents and the durations of chronic exposure to sublethal levels of copper that bluegills can tolerate without adverse effects. Groups of young bluegills (6 to 8 cm) were exposed in 760-L tanks to water regulated to pH 5.5 that contained either no additional copper or 20, 40, 80, or 160 μg/L additional copper. In one tank, water was regulated to pH 7 and the copper to 80 μg/L. Liver metalloproteins from the bluegills were separated into a low molecular-weight (LMW) protein fraction, which contains metallothioneins (MTs), and into intermediate molecular-weight (IMW) and high molecular-weight (HMW) fractions, which contain metalloenzymes (MEs), using high performance liquid chromatography. Large differences in quantities of copper associated with metalloproteins were found. Copper concentrations in the LMW, IMW, and HMW protein fractions and in the pellet (insoluble fraction) increased with increased exposure concentration and time. Concentrations of copper in the LMW protein fraction and pellet of bluegills exposed to 160 μg Cu/L appeared to plateau with long exposure times whereas those in the HMW protein fraction appeared to increase exponentially. Mortality was dependent on exposure concentration and duration and appeared to be correlated with the saturation of the MT-detoxication capability.

10932 **(OEFZS-LA—109/82) Concentration of heavy metals in water plants of some Austrian running waters.** Ledl, G.; Horak, O.; Janauer, G.A. (Oesterreichisches Forschungszentrum Seibersdorf G.m.b.H.). Feb 1982. 13p. (In German.). Oesterreichisches Forschungszentrum Seibersdorf G.m.b.h., Vienna (Austria).

Also published in Acta Hydrochim. Hydrobiol. (1981) v. 9(6) p. 651-663.

Austrian waters plants were sampled and analyzed by means of atomic absorption spectrometry to their contents of Fe, Mn, Zn, Cu, Ni and Cd. The highest values were found for Fe and Mn. High variations occurred which are explained by geochemically different conditions in sediments. The contents of Zn ranged between 40 and 200 μg/g TS but sporadicly exceeded those of Fe and Mn. The values for Cu were between 5 and 20 μg/g TS, those for Ni mostly between 1 and 8 μg/g TS. For Cd the lowest contents (less than 1 μg/g TS) were found. With some rivers a clear sequence of elements is noticed: Fe > Mn > Zn Cu > Ni > Cd. In plants of polluted waters, sporadiealy strongly increased values of all elements were found. The different heavy metal concentrations in plants don't depend on the environmental conditions but are species-specific. A clearly recognizable element and species specificity was shown at the calculation of enrichment factors. These range between 10^3 and 10^5 thus elements have varying concentrations. Beside the water moss fontinalis antipyretica elodea canadensis, ranunculus aquatilis agg., ranunculus fluitans and myriophyllum verticillatum concentrate most heavy metals strongest.

10933 **(ORNL/TM—8881) Acute, chronic and reproductive effects of petroleum and two petroleum substitutes on the large milkweed bug, Oncopeltus fasciatus.** Merchant, E.R.; Walton, B.T. (Oak Ridge National Lab., TN (USA)). Dec 1983. Contract W-7405-ENG-26. 69p. NTIS, PC A04/MF A01. Order Number DE84005078.

Thesis. Submitted by E.R. Merchant to Univ. of Tennessee, Knoxville.

Effects of petroleum and two synthetic oils on mortality and reproduction of the large milkweed bug, Oncopeltus fasciatus (Dallas), were compared. Reproduction was investigated because of its importance in the maintenance of population levels and the sensitivity of the reproductive system to toxicants. Adult milkweed bugs were dosed topically with the test oils to measure acute toxicity. Chronic toxicity was determined by mean survival after chronic exposure, starting with the fifth instar. The ability of sublethal levels of the test oils to affect reproduction was measured by the number of eggs laid and their percent hatch. The two synthetic oils were found to be more acutely and chronically toxic than petroleum. Egg production was not affected by petroleum but was reduced approximately 20% by sublethal levels of both synthetic oils. Egg viability was not affected.

10934 **(PNL-SA—11763) Estimated health effects from a regionwide weatherization program.** Sandusky, W.F.; Craig, R.A.; Cross, F.T.; Sever, L.E.; Parker, G.B. (Pacific Northwest Lab., Richland, WA (USA)). Oct 1983. Contract AC06-76RL01830. 11p. (CONF-8311122—1). NTIS, PC A02/MF A01. Order Number DE84003959.

From 20. annual meeting of PNWIS-APCA; Seattle, WA, USA (16 Nov 1983).

The Pacific Northwest Laboratory (PNL) has prepared a Draft Environmental Impact Statement (DEIS) for the Bonneville Power Administration (BPA) proposed expanded regionwide residential weatherization program. One aspect of the DEIS was to estimate regionwide health effects resulting from increased levels of radon, formaldehyde, and Benzo-a-pyrene (BaP) that may occur in various residence types. To do this, a simple modeling technique was used in conjunction with data from a survey of regional housing stock. Our results indicated that for the BPA residential service region (Oregon, Washington, Idaho, and western Montana) between 8 and 9 additional lung cancers per year above the current level (113 to 114 lung cancers per year) are estimated to occur. The above value is based on assumption that 85% of those homeowners not currently eligible to receive tightening measures would actually participate in the program. If the participation rate is 50 to 55%, then between 4 and 5 additional lung cancers per year are estimated to occur. Described in this paper are the modeling techniques, assumptions, and data used to obtain the above noted values. Also provided is information for the present weatherization program being implemented by BPA and relative uncertainty associated with each estimated health effect value.

10935 **(UCRL—88687) Partitioning of copper among copper-binding proteins in the mussel Mytilus edulis exposed to soluble copper.** Harrison, F.L.; Lam, J.R. (Lawrence Livermore National Lab., CA (USA)). Dec 1983. Contract W-7405-ENG-48. 28p. (CONF-8310230—1). NTIS, PC A03/MF A01. Order Number DE84004361.

From Environmental health aspects of estuarine research symposium; Virginia Beach, VA, USA (22 Oct 1983).

Partitioning of copper among copper-binding proteins was evaluated in digestive glands of Mytilus edulis exposed to soluble copper. Groups of mussels were held in flow-through bioassay systems and exposed to either ~ 1 (control) or 25 μg Cu/L for as long as 21 weeks. At 3-week intervals, groups of 25 mussels were removed and the digestive glands were analyzed for copper-binding proteins by gel-permeation chromatography and atomic absorption spectrometry. Chronic exposure to copper resulted in increased amounts of copper in the low molecular-weight (LMW) protein fraction, which contains metallothionein-like proteins, and in the high molecular-weight (HMW) protein fraction, which contains metalloenzymes. Concentrations of copper in the LMW protein fraction increased and then appeared to plateau with long exposure times, whereas those in the HMW protein fraction continued to increase with exposure time.

10936 **An algal assay method for determination of copper complexation capacities of natural waters.** Allen, H.E.; Blatchley, C.; Brisbin, T.D. (Illinois Inst. of Technology, Chicago). *Bulletin of Environmental Contamination and Toxicology;* **30**: No. 4, 448-455(Apr 1983). Contract W-31-109-ENG-38.

The complexation capacity of natural waters was determined by the Davey method using a green alga and compared to that determined by plotting the free copper ion concentration versus the growth rate. Results show that the complexation capacities determined by each method were statistically the same. However, these two methods differ in an important way. For Davey's method only those data in the vicinity of the equivalence point are used. For the biological titration all data can be used if the complex is strong. For weaker complexes, the data for total metal concentrations similar to that of the complexation capacity will deviate from linear behavior. In these cases the data which deviate can be disregarded. The biological titration method is easier to use because it does not require that a significant number of samples have metal concentrations similar to the value of the complexation capacity. (JMT)

10937 **Sensitivity of Drosophila melanogaster to low concentrations of gaseous mutagens. IV. Mutations in embryonic spermatogonia.** Kale, P.G.; Baum, J.W. (Brookhaven National Lab., Upton, NY). *Mutation Research;* **113**: 135-143(1983). Contract AC02-76CH00016.

Drosophila embryos were treated with gaseous ethylene dibromide at concentrations ranging from 0.26 to 200 ppm, thereby exposing a homogeneous and non-dividing population of primordial spermatogonia. Mutations were induced at exposures as low as 1 ppm for 3 h indicating the sensitivity of spermatogonia and the usefulness of this life-cycle stage for detection of mutagens. Other advantages of using embryos are also discussed. The relations between exposure vs. percentage of mutations per chromosome tested and vs. percentage of positive males were linear at low exposures indicating the possibility of extrapolation of the data to very low doses and lack of a threshold. For some males 50% of the progeny carried a mutation, and mutations continued to appear in all tested broods providing evidence of damage to stem cells undergoing quasidichotomous divisions. Damage to the stem cells is important in terms of total effects on the gene pool and may contribute more mutations than that due to damage in the more sensitive spermatocytes and spermatids. Spermatogonial stages, therefore, should also be considered in mutagen screening and risk-benefit analyses.

10938 **Localization of specific lesions in dimethylbenz(a)anthracene-preexposed tracheal explants.** Marchok, A.C. (Oak Ridge National Lab., TN); Nettesheim, P.; Johnston, W.W. *American Journal of Pathology;* **109**: No. 3, 321-329(Dec 1982). Contract W-7405-ENG-26.

An experimental model is described for separating out and identifying, by a nondestructive method, lesions induced in rat tracheal implants exposed to 200 μg dimethylbenz(a)anthracene (DMBA)-beeswax pellets. The approach was to cut exposed and nonexposed tracheas into 2 x 3-mm explants and place them in organ culture for 24 hours. The medium was collected, and the exfoliated cells in the medium were stained by the Papanicolaou method for cytologic diagnosis. The exfoliated cells were graded according to the degree of atypia by conventional cytologic criteria. To validate the cytologic diagnoses, 60 organ cultures were fixed, sectioned, and stained; and the histopathologic diagnoses were compared. In most cases, the cytologic findings were predictive of the histopathologic results. To test for alterations in growth characteristics of cell populations derived from specific lesions, epithelial cell cultures were established from 35 organ cultures. All primary cultures from explants showing moderate or more severe atypia, and 40% from those showing regular metaplasia or mildly atypical lesions, survived and grew in culture. Cultures from unexposed tracheas did not survive.

10939 **Effect of carcinogen release rate on the incidence of preneoplastic and neoplastic lesions of the respiratory tract epithelium in rats.** Shiba, M. (Univ. of Tennessee, Oak Ridge); Klein-Szanto, A.J.P.; Marchok, A.C.; Pal, B.C.; Nettesheim, P. *JNCI, Journal of the National Cancer Institute;* **69**: No. 5, 1155-1161(Nov 1982). Contract W-7405-ENG-26.

Inbred F344 rat tracheal transplants were exposed to 7,12-dimethylbenz[a]anthracene (DMBA) delivered at different release rates from intraluminal pellets made of various matrices to study the effect of carcinogen dose rate on the induction of lesions in the

epithelium. These matrices were beeswax, beeswax-stearyl alcohol, and beeswax-cholesterol. In addition, DMBA adsorbed onto carbon particles was dispersed in beeswax-stearyl alcohol. The fastest release was obtained from beeswax pellets from which 99% of the carcinogen (198 μg) was released in 4 weeks, and the slowest release was from DMBA adsorbed on carbon at a ratio of 1:9 from which only 56% (113 μg) was released in 16 weeks. Morphometry of histologic sections showed marked differences in the percentage of luminal surface covered by dysplastic-neoplastic epithelium (i.e., 7.5% in the tracheas exposed to the fastest releasing pellets and 46.3% in the tracheas exposed to the slowest releasing pellets). An inverse linear correlation was found between the cumulative amount of DMBA release from the different pellet matrices at 2 weeks and the incidence of dysplastic plus neoplastic lesions of tracheal epithelium at 16 weeks. The results indicated that lower doses of carcinogen delivered slowly are more effective in producing dysplastic plus neoplastic lesions than higher doses delivered rapidly.

10940 **Dose-dependent disposition of ethylene glycol in the rat after intravenous administration.** Marshall, T.C. (Lovelace Biomedical and Environmental Research Inst., Albuquerque, NM). *Journal of Toxicology and Environmental Health;* **10**: No. 3, 397-409(Sep 1982). Contract AC04-76EV01013.

A dose-dependent change was observed in the disposition of ^{14}C-labeled ethylene glycol (EG) after iv administration of 20, 200, 1000, and 2000 mg/kg to Fischer 344 rats. The part of the dose expired as CO_2 decreased from 39% at 20 and 200 mg/kg to 26% at 1000 and 2000 mg/kg, while urinary excretion of radiocarbon increased from 25 to 56%. The increase in urinary ^{14}C was almost entirely attributable to [^{14}C]glycolate, which comprised 20% of the dose in 24 h at the two higher dose levels and only 2% at the lower doses. High doses of EG limited the processes responsible for glycolate metabolism, supporting the idea that this acid is a major contributing factor to the acute toxicity of EG. Compensatory urinary excretion of glycolate resulted in minimal dose-dependent effects on ^{14}C blood clearance. Blood clearance of ^{14}C occurred in an initial rapid phase (half-life, 3-5 h), when plasma was comprised predominantly of ethylene glycol, that persisted for 12 h at 20 mg/kg EG and 30 h at 2000 mg/kg. The dose-dependent profile of EG metabolism argues against the use of very high chronic doses in studies intended to estimate health risks of long-term, low-level exposure to EG.

10941 **Acute and genetic toxicity of 1-nitropyrene and its fate after single oral doses to rats.** Marshall, T.C.; Royer, R.E.; Li, A.P.; Kusewitt, D.F.; Brooks, A.L. (Lovelace Inhalation Toxicology Research Inst., Albuquerque, NM). *Journal of Toxicology and Environmental Health;* **10**: No. 3, 373-384(Sep 1982). Contract AC04-76EV01013.

The mammalian acute and genetic toxicity of 1-nitropyrene (NP) was studied because this and other nitroarenes are highly mutagenic toward bacteria and have been identifid in emissions from combustion processes. A suspension of NP did not cause observable signs of acute toxicity and was not lethal when administered to male and female rats at single oral doses at high as 5.0 g/kg. Histological examination of stomach, intestine, lung, heart, spleen, pancreas, adrenal, and kidney from rats euthanized at 4 and 14 d after treatment revealed no detectable differences from control rats. Urine and feces were collected for 4 d after treatment with 5.0 g/kg. About 70% of the dose was present in the feces as NP, and about 2% was present as the reduced metabolite 1-aminopyrene (AP). Sulfate and glucuronide conjugates of AP were present in small amounts (<1%) in the urine, showing that at least some of the dose was absorbed. Bone marrow cells from female rats given NP orally at 0.5, 1.5, and 5.0 g/kg showed a slight dose-related increase in the frequency of sister chromatid exchanges. Both NP and AP showed low mutagenicity in Chinese hamster ovary cells in vitro. Evidence of reductive metabolsm of NP in rats raises concern about the potential exposure of humans to this compound. However, the weak in vivo and in vitro genetic toxicity of NP at high dose level in mammalian systems suggests that the potential hazard may not be as high as predicted from bacterial mutagenicity data.

10942 **Queuine-containing isoacceptor of tyrosine tRNA in Drosophila melanogaster - alteration of levels by divalent cations.** Christie, N.T. (Oak Ridge National Lab., TN); Owenby, R.K.; Jacobson, K.B.; Hiatt, V.S.; Farkas, W.R. *Biochimica et Biophysica Acta;* **699**: 40-48(1982). Contract W-7405-ENG-26.

Dietary cadmium causes the queuine-containing, Q(+), isoacceptors to increase relative to the guanine-containing, Q(-), ones of tRNA/sup Tyr/, tRNA/sup His/ and tRNA/sup Asp/ of Drosophila melanogaster. Of the other divalent cations examined, Sr^{2+}, Ni^{2+}, Cu^{2+}, Zn^{2+} and Hg^{2+}, only Hg^{2+} failed to cause an increase in Q(+)tRNA/sup Tyr/. For these results, all pre-adult stages of the organism were spent on media containing the divalent ions. Adult flies that had developed on a normal diet also responded to divalent ions; Hg^{2+} as well as Cd^{2+}, Sr^{2+} and Zn^{2+} caused an increase in Q(+)tRNA/sup Tyr/ in 4 days. Using adult flies, the rate of the response was measured; when placed on a Cd^{2+} -containing diet, they formed significantly more Q(+)tRNA/sup Tyr/ within 24 h as compared to adults on a normal diet. Whether the queuine is derived from the diet or from de novo synthesis is yet to be determined. Since the metal ions represent a range of values in the 'hard-soft' classification, different sites of reaction are expected, yet for Drosophila a common result is an alteration in the ratio of Q(+) and Q(-) isoacceptors of these tRNAs. The transition to Q(+)tRNA may be an early indication of the metabolic imbalances resulting from the presence of the divalent cation.

10943 **Acute toxicity of methanol in the folate-deficient acatalsemic mouse.** Smith, E.N.; Taylor, R.T. (Lawrence Livermore National Lab., Livermore, CA). *Toxicology;* **25**: 271-287(1982). Contract W-7405-ENG-48.

A study was undertaken to assess whether folic acid deficient (FAD) mice which accumulate formate are much more sensitive to the lethal effects of methanol than folic sufficient (FAS) mice. Moreover, because some formate is oxidized by catalase-H_2O_2 in rodents, but not in primates, a comparison was made of the urinary excretion and blood plasma accumulation of formate and the methanol sensitivity of acatalasemic mice. Results indicate that the plasma formate concentration does not correlate well with methanol lethality in Cs/sup b/-FAS vs. -FAD mice. In addition, urinary excretion, not oxidation, is the primary means by which mice, and probably rats, eliminate high levels of blood formate. Since the Cs/sup b/-FAD mouse attains high plasma formate levels and low blood pH-values similar to those which have been reported for methanol poisoned monkeys, it appears to be of value as an inexpensive small animal model for further studies of lethal methanol toxicity and the contribution of formate to this process. (JMT)

10944 **Gastrointestinal absorption of cadmium in mice during gestation and lactation.** Bhattacharyya, M.H. (Argonne National Lab., IL); Whelton, B.D.; Peterson, D.P. *Toxicology and Applied Pharmacology;* **66**: 368-375(1982). Contract W-31-109-ENG-38.

The effect on cadmium retention of continuous exposure to drinking water containing low levels of cadmium during pregnancy and lactation was studied in mice. Female mice were provided drinking water ad libitum containing $^{109}CdCl_2$ (0.03 μCi ^{109}Cd/ml, 0.11 ppb total cadmium) throughout either gestation, lactation, or a combined period of pregnancy and lactation. Nonpregnant control mice were exposed to the same cadmium solution for similar time periods. Dams in all three experimental groups retained two to three times cadmium (expressed as percentage of ingested dose) than did nonpregnant controls. The ^{109}Cd contents of liver, kidney, mammary tissue, and duodenum increased strikingly in all three groups. Increases in kidney and mammary tissue were particularly apparent during lactation, with increases of fivefold for kidney and at least ninefold for mammary tissue, compared to levels in nonpregnant controls. Increases in ^{109}Cd retention by the duodenum were fivefold during gestation and three- to fourfold during lactation. The kidneys of dams exposed during lactation retained 53% of the whole body ^{109}Cd, while kidneys of nonpregnant controls retained only 27%. Results indicate that pregnant and lactating mice absorb and subsequently retain substantially more cadmium from their diets than do nonpregnant mice.

10945 **Genetic effects of 1,2-dibromo-3-chloropropane (DBCP) in Drosophila.** Kale, P.G.; Baum, J.W. (Brookhaven National Lab., Upton, NY). *Environmental Mutagenesis;* 4: 681-687(1982). Contract AC02-76CH00016.

Induction of sex-linked recessive lethal mutations, heritable translocations and genetic crossing-over were studied in Drosophila melanogaster males treated as adults and as embryos with different concentrations of gaseous DBCP. Adults exposed to 30 ppm/hr of the compound did not produce a significant number of sex-linked recessive lethal mutations in treated spermatozoa, spermatids, or spermatocytes. However, at an exposure of 17.7 ppm/hr, a weak mutagenic effect was observed in embryonic spermatogonia. No translocation was scored in 4032 tested chromosomes from adults treated with 150 ppm/hr. However, a significant number of spermatocytial crossovers were induced after an exposure of 120 ppm/hr.

5604 Other Environmental Pollutant Effects

10946 **(PB—83-259648) Human reactions to ELF electric and magnetic fields: an annotated bibliography of current literature (3rd edition). Final report.** Reilly, J.P. (Johns Hopkins Univ., Laurel, MD (USA). Applied Physics Lab.). Jul 1983. 95p. NTIS, PC A05/MF A01.

The annotated bibliography lists current literature (since 1960) which applies to human reactions to electric and magnetic fields from 10 HZ to 100 HZ, with an emphasis on power frequency fields. This includes direct experimental work with humans, epidemiological studies, work which use animal studies to draw interferences about human reactions, studies concerning human dosimetry, and works which discuss means for human protection. This volume is an updated version of an earlier bibliography, first published in July 1981, and revised in a second edition in July 1982.

10947 **(SIS—1982:2) Administrative norms on radiofrequency radiation for occupationally exposed persons.** Saxeboel, G. (Statens Inst. for Straalehygiene, Oslo (Norway)). 1982. 6p. (In Norwegian). NTIS (US Sales Only), PC A02/MF A01. Order Number DE83704554.

The report presents a proposal for administrative norms on radiofrequency (RF) radiation for occupationally exposed persons. The norms establish maximum allowable field exposure in a frequency range from 1 MHz too 300 GHz.

10948 **(SIS—1983:2) Examination of radiofrequency radiation in the plastic and furniture industries.** Hannevik, M.; Saxeboel, G. (Statens Inst. for Straalehygiene, Oslo (Norway)). 15 Feb 1982. 40p. (In Norwegian). NTIS (US Sales Only), PC A03/MF A01. Order Number DE83704555.

Radiofrequency (RF) dielectric sealers and heaters are used to weld, glue or heat plastic or wood materials. During the process the operators can be exposed to high levels of RF-radiation. In the report measurements of the electric and magnetic field strengths in the operator position in 20 facilities are presented. The results are discussed in relation to a radiation protection standard which is under work in Norway. A significant number of devices exposed their operators to fields having an equivalent power density greater than 250 W/M^2 averaged over one second and 10 W/m^2 averaged over one hour. Some means for reducing exposure to the operators are presented.

10949 (CONF-821215—, pp 25-29) **Office of Operational Safety environmental program missions and objectives.** Welty, C.G. Jr. (Dept. of Energy, Washington, DC). Aug 1983. NTIS, PC A24/MF A01.

From 4. DOE environmental protection information meeting; Denver, CO, USA (7 Dec 1982).

DOE's environmental protection program mission and objectives are listed and four subprograms are described in detail. The four subprograms include (1) policy, requirements and guidance, (2) communication and coordination, (3) overview, and (4) technical support. 8 figures. (JMT)

10950 (CONF-821215—, pp 323-331) **Risk assessment as a means of evaluating environmental controls.** Dover, S.A. (Rocky Flats Plant, Golden, CO). Aug 1983. NTIS, PC A24/MF A01.

From 4. DOE environmental protection information meeting; Denver, CO, USA (7 Dec 1982).

A probabilistic risk assessment is a systematic method for estimating the potential for unwanted or negative consequences resulting from an activity. It can focus on any component, subsystem, or system, from the risk of a single part failure to risk of an unwanted hazardous material release for an entire plant. The end result of a risk assessment is a risk value which can be used to judge the adequacy of an environmental control system, or the cost-effectiveness of a proposed new addition to a system. The risk assessment process will also highlight the most effective environmental controls or new controls that have the greatest impact. The information necessary for a risk assessment is developed by performing Safety Analyses as defined in DOE Order 5481.1A. These safety analyses estimate the probability of human and equipment failures, and the corresponding consequences to the structure, workers and environment. As this paper illustrates, this information could easily be used to evaluate the effectiveness and future needs of environmental control systems. The Safety Analyses and Risk Assessments from the Rocky Flats Plant in Golden, Colorado will be used for this illustration. 4 references.

10951 **(ORNL—5962) Industrial Safety and Applied Health Physics Division, annual report for 1982.** (Oak Ridge National Lab., TN (USA)). Dec 1983. Contract W-7405-ENG-26. 72p. NTIS, PC A04/MF A01. Order Number DE84005080.

Portions are illegible in microfiche products. Original copy available until stock is exhausted.

Activities during the past year are summarized for the Health Physics Department, the Environmental Management Department, and the Safety Department. The Health Physics Department conducts radiation and safety surveys, provides personnel monitoring services for both external and internal radiation, and procures, services, and calibrates appropriate portable and stationary health physics instruments. The Environmental Management Department insures that the activities of the various organizations within ORNL are carried out in a responsible and safe manner. This responsibility involves the measurement, field monitoring, and evaluation of the amounts of radionuclides and hazardous materials released to the environment and the control of hazardous materials used within ORNL. The department also collaborates in the design of ORNL Facilities to help reduce the level of materials released to the environment. The Safety Department is responsible for maintaining a high level of staff safety. This includes aspects of both operational and industrial safety and also coordinates the activities of the Director's Safety Review Committee. (ACR)

10952 **(PB—83-257071) Noise attenuating properties of earmuffs worn by miners. Volume 2. Development of a laboratory procedure for the physical measurement of earmuff attenuation. Open file report 1 Jul 1979-30 Jun 1980.** Stewart, K.C.; Burgi, E.J. (Pittsburgh Univ., PA (USA). Graduate School of Public Health). Jun 1980. 37p. NTIS, PC A03/MF A01.

The purpose of this study was to develop and evaluate, in the laboratory, instrumentation and procedures that might allow for the use of physical measurements of earmuff attenuation that would yield results equivalent to those obtained from psychophysical measures of attenuation. The ultimate goal was to evaluate techniques that might subsequently prove feasible for physical measurement of earmuff attenuation in the field. Instruments currently in use were modified to have a response similar to differences observed in earmuff attenuation as observed in volume 1 of this report. Mining noise spectra were selected and presented to a single subject seated in a diffuse noise field wearing one of the muffs evaluated in the earlier study and fitted with two physical sound measurement systems. A linear system measured the outside noise level and a linear system plus c correction filter measured the inside

noise level. The measurements indicated that under the procedures presented in this report, a laboratory method for measuring earmuff attenuation is feasible and yields results comparable with an extensive psychophysical procedure.

10953 **(IAEA-R—2259-F) Radioisotope tracer application in surface and groundwater flow measurements. Final report for the period 1 January 1979 - 30 September 1982.** Monev, E. (International Atomic Energy Agency, Vienna (Austria)). Jan 1983. 107p. (In Russian). NTIS (US Sales Only), PC A06/MF A01. Order Number DE83704541.

The "peak to peak" method for measurement of water flow with the use of radioactive tracer was investigated. The theoretical basis for this method has been established. The experiments in the open channel have shown the applicability of the method. Groundwater flow was studied by injection of radioactive tracer into the bore-hole followed by gamma-logging in three different time intervals. Interpretation of gamma lows in terms of filtration velocity in various depths proved to be possible.

10954 **(IAEA-R—2384/F) Research within the coordinated programme on comparison of methods of "age" determination of ground water based on decay of long-lived radioisotopes, especially 32-Si. Final report for the period 1 June 1979 - 31 January 1982.** Clausen, H. (International Atomic Energy Agency, Vienna (Austria)). Jun 1982. 4p. NTIS (US Sales Only), PC A02/MF A01. Order Number DE83704542.

Groundwater samples from two investigation areas have been analysed for the content of ^{32}Si. The possible presence of ^{32}Si in groundwater indicates that the "younger" component as underground production of ^{32}Si is unlikely. The concentration of ^{32}Si in measured samples except one (shallow groundwater) is low (around measurement error) which may indicate the exchange of silicone between radioactive and "dead" silica in the soil. At this stage the ^{32}Si "dating" method is not feasible for groundwater.

10955 (USGS-PP—1161-A-BB, pp B1-B11) **Precambrian development of an oxygenic atmosphere.** Schopf, J.W. (Univ. of California, Los Angeles). 1981. NTIS, PC A19/MF A01. (CONF-7510205—).

From Workshop on genesis of uranium- and gold-bearing precambrian quartz-pebble conglomerates; Golden, CO, USA (13 Oct 1975).

It has become rather widely accepted in recent years that (1) during the geologic past, the Earth's atmosphere evolved from an initial anoxic to a later oxygenic state; that (2) this change was a result of the cumulative effects of green plant (i.e., oxygen-producing) photosynthesis; and that (3) the transition occurred during Precambrian, and probably Early Proterozoic, time. Although evidence in support of these views appears to be both more circumstantial and more qualitative than has perhaps been generally appreciated, a broad range of biological (and paleobiological, biochemical, and organic-chemical) data seems to establish that such a transition did in fact occur during the Precambrian as a result of blue-green algal photosynthesis, with geological (and mineralogical) data suggesting a plausible date for the transition of about 2000 million years ago. Nevertheless, it has become increasingly evident that the Earth's early atmosphere was not totally devoid of free oxygen, as had apparently been assumed by many workers. Diagenetic oxidation, to yield such sediments as banded iron-formations and red beds, may thus have occurred on the primitive Earth prior to the advent of oxygen-producing photosynthesizers; if so, the mere presence of such deposits should not be construed as necessarily evidencing the occurrence either of biological activity or of an environment sufficiently oxygenic to have been habitable by aerobic forms of life.

10956 (USGS-PP—1161-A-BB, pp I1-I5) **Examples of possible movement of gold in solution in the Witwatersrand, Ventersdorp, and Transvaal systems.** Whiteside, H.C.M. 1981. NTIS, PC A19/MF A01. (CONF-7510205—).

From Workshop on genesis of uranium- and gold-bearing precambrian quartz-pebble conglomerates; Golden, CO, USA (13 Oct 1975).

Many South African geologists consider that gold especially, and probably uraninite, as well as other heavy minerals such as zircon, chromite, and diamond, are detrital in the Precambrian quartz-pebble conglomerates of South Africa. It is suggested here that solution of gold and its redeposition elsewhere may have played a part in its enrichment or impoverishment. Two examples of possible solution of gold are cited, and the lack of modern placers associated with auriferous Witwatersrand is briefly discussed.

10957 (USGS-PP—1161-A-BB, pp P1-P4) **Distribution and sedimentary arrangement of carbon in South African proterozoic placer deposits.** Minter, W.E.L. (Anglo American Corp., Welkom, South Africa). 1981. NTIS, PC A19/MF A01. (CONF-7510205—).

From Workshop on genesis of uranium- and gold-bearing precambrian quartz-pebble conglomerates; Golden, CO, USA (13 Oct 1975).

Carbon, which occurs as grains, films, and thin seams in Witwatersrand Proterozoic placer deposits, is generally confined to carbon-seam reefs that were deposited in distal environments. The distribution of carbon on paleosurfaces, on sedimentary accumulation surfaces like pebble layers, on trough-shaped bedforms of pi-crossbedded units and foresets, and on the winnowed top of placer sediments implies that its growth took place contemporaneously with placer deposition in an aquatic fluvial environment. The areal distribution of carbon seams in distal environments is patchy, and its sparsity or total absence in some areas does not affect either the gold or the uranium content of the placer. High gold and uranium contents that appear to be associated with carbon seams are at the base of the reef because that position represents both the stable consolidated paleosurface upon which the plant material anchored itself and also the surface of bedload concentration.

10958 (USGS-PP—1161-A-BB, pp Z1-Z17) **Basal conglomerates and weathered zones in the Marquette Range Supergroup, Northern Peninsula of Michigan - Age, indications of atmospheric oxygen, and uranium potential.** Cannon, W.F. (Geological Survey, Reston, VA). 1981. NTIS, PC A19/MF A01. (CONF-7510205—).

From Workshop on genesis of uranium- and gold-bearing precambrian quartz-pebble conglomerates; Golden, CO, USA (13 Oct 1975).

The Marquette Range Supergroup is a thick accumulation of sedimentary and volcanic rocks deposited between 2.6 and 1.9 billion years ago. Conglomerates and quartzites that are basal in the sense that they lie directly on Archean rocks, are of three ages, and crop out along a strike length of about 600 kilometers. The conglomerates have been considered possible hosts for uranium ore because of close geographic proximity, approximate age equivalence, and certain lithologic similarities to uraniferous quartz-pebble conglomerates in the Huronian of Canada. To date, no uranium deposits are known in conglomerates of the Marquette Range Supergroup, but extensive cover by glacial deposits is a severe hindrance to exploration. There is a substantial possibility that even large deposits would not be found in outcrop. Radiometric dating suggests that the Marquette Range Supergroup is at least in part younger than the Huronian, but results are not conclusive. The best guess as to correlation is that the lowest units of the Marquette Range Supergroup are equivalent to the uppermost units of the Huronian. Iron-formations and weathered zones near the middle of the Marquette Range Supergroup contain indications of an oxygen-rich atmosphere. A favorable uranium potential for conglomerates of the Marquette Range Supergroup is indicated by the widespread presence of anomalously uraniferous Archean basement rocks, abundant quartz-pebble conglomerate in basal units, uranium concentrations in black slates and iron-formations in slightly younger parts of the supergroup, and monazite-rich placer deposits in some of the quartz-pebble conglomerates.

10959 **Visual classification of very fine-grained sediments: evaluation through univariate and multivariate statistics.** Hohn, M.E. (West Virginia Geological and Economic Survey, Morgantown); Nuhfer, E.B.; Vinopal, R.J.; Klanderman, D.S. *Journal of the International Association for Mathematical Geology;* 12: No. 5, 589-605(1980).

Classifying very fine-grained rocks through fabric elements provides information about depositional environments, but is subject to the biases of visual taxonomy. To evaluate the statistical significance of an empirical classification of very fine-grained rocks, samples from Devonian shales in four cored wells in West Virginia and Virginia were measured for 15 variables: quartz, illite, pyrite and expandable clays determined by X-ray diffraction; total sulfur, organic content, inorganic carbon, matrix density, bulk density, porosity, silt, as well as density, sonic travel time, resistivity, and γ-ray response measured from well logs. The four lithologic types comprised: (1) sharply banded shale, (2) thinly laminated shale, (3) lenticularly laminated shale, and (4) nonbanded shale. Univariate and multivariate analyses of variance showed that the lithologic classification reflects significant differences for the variables measured, difference that can be detected independently of stratigraphic effects. Little-known statistical methods found useful in this work included: the multivariate analysis of variance with more than one effect, simultaneous plotting of samples and variables on canonical variates, and the use of parametric ANOVA and MANOVA on ranked data.

10960 **(AERE-R—10819) Potential for the application of nuclear techniques in selected developing countries in Africa.** Clayton, C.G. (UKAEA Atomic Energy Research Establishment, Harwell. Nuclear Physics Div.). Feb 1983. 139p. HMSO, London, England £ 6.00.

A survey is presented of the distribution of mineralisation, the intensity of exploration and the principal mining operations in a number of developing countries in Africa. Based on this survey the potential for exploiting the use of nuclear instrumentation and measuring techniques in these countries is assessed.

10961 **(NUREG/CR—3143-Vol.2) Indirect rock mass investigations for optimizing borehole drilling programs. Summary of wave propagation geophysical techniques. Volume 2.** Glass, C.E.; Dudley, D.G.; Howard, A.Q. Jr. (Arizona Univ., Tucson (USA). Dept. of Mining and Geological Engineering). Nov 1983. 318p. NTIS, PC A14/MF A01 - GPO $7.50. Order Number DE84900715.

Portions are illegible in microfiche products.

Waves, by way of their speed of propagation, interaction with boundaries, and energy loss mechanisms, yield information related to the physical properties of media through which they pass. Measurements of wave characteristics at the ground surface or in boreholes, therefore, provide a means by which to ascertain the geologic properties and internal geometry of a rock mass. Geotomography and wavefront reconstruction (holography) are considered two promising techniques for site investigation and characterization. Of the two, geotomography is treated in detail because of its lower sensitivity to noise, and ease of implementation. Algorithms are presented for both ray-optics geotomography and diffraction geotomography. Although the diffraction geotomography algorithm is more general and more satisfying from a physics standpoint, for large numbers of measurements (typical field situations) the mathematics of the inverse problem implicitly requires source frequencies that approach ray optics behavior. The ultimate conclusion is that, regardless of the algorithm used, one should probe using the highest source frequencies possible for given site conditions. 60 references, 103 figures, 5 tables.

10962 **(NUREG/CR—3552) Canadian Seismic Agreement.** Basham, P.W.; Lyons, J.A.; Drysdale, J.A.; Shannon, W.E.; Andersen, F.; Hayman, R.B.; Wetmiller, R.J. (Canadian Commercial Corp., Ottawa, Ontario). Nov 1983. 22p. NTIS, PC A02/MF A01 - GPO $3.00. Order Number DE84900718.

The ECTN network has remained stable over the past year; progress on the new concentrator software has been slow. Major developments have taken place in the Ottawa Data Laboratory including the installation of a new VAX system and further development of the Seismic Analysis Monitor software. A new initiative has been the development of hardware and software for the Sudbury Local Telemetered Network, which can be considered a prototype for a smart outstation. The performance of the ECTN over the past year is described along with a summary of eastern Canadian seismicity during the reporting period and a list of EPB research publications on eastern Canadian seismicity during the past year. 4 figures, 3 tables.

10963 **(UCRL—89190) Alterant geophysical tomography.** Ramirez, A.L.; Lytle, R.J. (Lawrence Livermore National Lab., CA (USA)). May 1983. Contract W-7405-ENG-48. 5p. (CONF-830870—2). NTIS, PC A02/MF A01. Order Number DE84004794.

From International geoscience and remote sensing symposium; San Francisco, CA, USA (31 Aug 1983).

Portions are illegible in microfiche products.

We describe and evaluate a new geophysical technique used to remotely map fractures between boreholes: alterant geophysical tomography (AGT). The method requires that the attenuation properties of rock fractures be altered by forcing into the rock a fluid with different electrical properties than those of the native fluids in the rock. Measurements of electromagnetic attenuation factor are performed before and after the tracer is used. Measuring changes in attenuation properties offers significant advantages over measuring absolute attentuation properties. Results of an experiment in which this technique was employed are discussed. 4 references, 4 figures.

10964 **(BMI/OCRD—4(1)) CSM/OCRD hard rock test facility at the CSM experimental mine, Idaho Springs, Colorado.** Hustrulid, W.A. (Colorado School of Mines, Golden (USA)). Sep 1983. Contract AC02-83CH10140. 16p. NTIS, PC A02/MF A01. Order Number DE84003197.

This report is the first in a series describing research conducted by the Colorado School of Mines (CSM) for the Office of Crystalline Repository Development (OCRD) to determine the extent of blast damage in rock surrounding an underground opening. A special room, called the CSM/OCRD room, was excavated for the purpose of assessing blast damage in the rock around the room. Even though this mine is not proposed as a nuclear waste repository site, the instrumentation and methods of blast damage assessment developed in this project are applicable to proposed repository sites. This report describes the room, and summarizes the overall experimental program. 4 references, 2 figures.

10965 **(BMI/OCRD—4(3)) Hard rock excavation at the CSM/OCRD test site using Swedish blast design techniques.** Holmberg, R. (Colorado School of Mines, Golden (USA). Dept. of Geological Engineering). Sep 1983. Contract AC02-83CH10140. 104p. NTIS, PC A08/MF A01. Order Number DE84003830.

This report is the third in a series describing research conducted by the Colorado School of Mines for the Office of Crystalline Repository Development (OCRD) to determine the extent of blast damage in rock surrounding an underground opening. A special room, called the CSM/OCRD room, was excavated at the CSM experimental mine for the purpose of assessing blast damage in the rock around the room. Even though this mine is not proposed as a nuclear waste repository site, the instrumentation and methods of blast damage assessment developed in this project are applicable to proposed repository sites. This report describes the application of Swedish blasting technology for the excavation of the test room. The design of the blasting patterns including the selection of explosives, hole sizes and location, explosive loading densities, and delay intervals is based upon the theories of Langefors

and Kihlstrom in combination with methods used at the Swedish Detonic Research Foundation for minimizing unwanted rock damage. The practical application of the design procedures to seven rounds and the achieved results is discussed.

10966 **(ONWI—190(4)) Avery Island brine migration tests: installation, operation, data collection, and analysis.** Krause, W.B. (RE/SPEC, Inc., Rapid City, SD (USA)). Dec 1983. Contract AC02-83CH10140. 99p. NTIS, PC A05/MF A01. Order Number DE84005202.

Portions are illegible in microfiche products. Original copy available until stock is exhausted.

Three brine migration tests were performed in domal salt at the Avery Island salt mine. The primary measurements included temperature, moisture collection, and pre- and post-test permeability. This report presents the data for the brine migration tests, an analysis of these data, comparison of the data with a brine migration theory, and related discussion and recommendations for future brine migration experiments. 8 references, 37 figures, 6 tables.

10967 **(SAND—83-1553) Stresses and strains at Yucca Mountain from underground nuclear explosions.** Vortman, L.J. (Sandia National Labs., Albuquerque, NM (USA)). Nov 1983. Contract AC04-76DP00789. 53p. NTIS, PC A04/MF A01. Order Number DE84002705.

Portions are illegible in microfiche products. Original copy available until stock is exhausted.

The stress and strain imposed on Yucca Mountain by an underground nuclear explosion (UNE) of 700 kt at a distance of 22.8 km is estimated. Surface motion measurements at Yucca Mountain from a UNE on Pahute Mesa were scaled to 700 kt assumed to be at the southern part of the Buckboard Area. Peak values of surface ground motion were reduced for repository depth according to experience from a recent measurement at Yucca Mountain. The P-wave was found to increase vertical stress only 8% above the lithostatic stress and to increase the horizontal stress by an additional 24%. Stresses produced by the Rayleigh wave are smaller than those produced by the P-wave. The P-wave produced a strain of 1.25×10^{-5}. The Rayleigh wave produced a horizontal strain of 9.5×10^{-6}, and a vertical strain of 5×10^{-6}. Because the wavelengths of the P-wave and the Rayleigh wave are so large with respect to a tunnel diameter, no dynamic amplification factors need be taken into account. Although the strains are small, they are much greater than those caused by earth tides or the east-west extension of the tectonic province in which Yucca Mountain is located. 11 references, 2 figures, 3 tables.

REFER ALSO TO CITATION(S) 9421, 9429, 9431, 9432, 9433, 9434, 9441, 9442, 9513, 10344, 10345, 10490, 10491, 10624, 10747

10968 **(PNL-SA—11773) Further validation of equilibrium thermodynamic speciation of uranium by analytical determination of anionic, cationic, and neutrally charged groups.** Jenne, E.A.; Garland, T.R.; Krupka, K.M. (Pacific Northwest Lab., Richland, WA (USA)). Oct 1983. Contract AC06-76RL01830. 13p. (CONF-8311110—1). NTIS, PC A02/MF A01. Order Number DE84004843.

From 6. workshop on environmental research for actinide elements; Hilton Head Island, SC, USA (7 Nov 1983).

We present here a new validation approach wherein analytical charge-form speciation data obtained with resin columns verifies the relative quantities of anionic vs cationic plus neutral species calculated via the MINTEQ equilibrium thermodynamic geochemical model (Felmy and Jenne, 1983). We thereby generally validate thermodynamic calculations of charge-form speciation, identify instances of discordant results which could suggest a deficiency in the thermodynamic model or analytical technique, and demonstrate the necessity of using highly competent geochemical models. 18 references, 2 tables.

10969 **(USGS-PP—1161-A-BB, pp L1-L17) Geochemical studies on the origin of the detrital pyrites in the conglomerates of the Witwatersrand Goldfields, South Africa.** Saager, R. (Univ. of Heidelberg, Germany). 1981. NTIS, PC A19/MF A01. (CONF-7510205—).

From Workshop on genesis of uranium- and gold-bearing precambrian quartz-pebble conglomerates; Golden, CO, USA (13 Oct 1975).

The principal source area of the Witwatersrand sediments, including heavy minerals such as gold, uraninite, and pyrite, lies to the west and north of the basin of deposition. Because this area is overlain by younger rocks, the actual identification of the source area is virtually impossible. On the basis of a hypothetical provenance model it has been suggested earlier that the primary source of the sediments was in the Archean granite-greenstone terrane of the Kaapvaal Craton. For the present study, 57 pyrite samples from primary gold deposits of the greenstone terrane (Swaziland Sequence) and from various gold reefs of the Witwatersrand deposit have been investigated for their trace-element content (Co, Ni, Cu, Zn, Pb, Ag) in order to study the possible presence of similar geochemical trends within both groups of pyrite. The analytical data have been treated by statistical methods, and the results indicate that both the primary and the detrital Witwatersrand pyrites, with respect to the investigated elements, were drawn from the same population. They are both clearly different from the Witwatersrand pyrites formed in situ. Lead isotope investigations carried out on sulfides from primary gold deposits of the Swaziland Sequence and on detrital and authigenic pyrites from the Witwatersrand deposit showed similar isotopic compositions of the lead in detrital pyrite and in primary sulfides from the Swaziland Sequence. The results of the present geochemical studies thus constitute strong evidence that the Archean greenstone belts of the Kaapvaal Craton were the most probable source of the detrital pyrites and also of the gold in the sediments of the Witwatersrand Basin.

From IUTAM 83 symposium: seabed mechanics; London, UK (5 Sep 1983).

Portions are illegible in microfiche products.

This paper summarizes results of 180 consolidation tests on samples from 52 cores taken with a variety of samplers in deep sea regimes of the North Western Atlantic and North Central Pacific. Most of the samplers were of large cross sectional area (over 10-cm dia) and attention was given to improving field techniques and reducing structural disturbance to the sediments. Good quality samples have been recovered to depths in excess of 25 m in several locations. The sediments were primarily fine-grained clays and silty clays with the predominant clay mineral being illite; however, the presence of smectite and calcium carbonate in some samples had significant influence on the properties. 34 references, 11 figures, 2 tables.

10971 **Some two-layer models of the shelf-slope front: Geostropic adjustment and its maintenence.** Ou, H.W. (Lamont-Doherty Geological Observatory of Columbia University, Palisades, NY 10964). *Journal of Physical Oceanography;* 13: No. 10, 1798-1923(Oct 1983). Contract AC02-76EV02185.

Two conceptual models of a two-layered frontal system are presented to study the wintertime shelf-slope front. The first model examines the geostropic adjustment over a step topography after the fall overturning and applied only over short time scales before the nonconservative processes become important. The second model, on the other hand, examines the thermodynamic balance over longer time scales when some dissipative and mixing effects are included. From the geostropic-adjustment model, it is found that the flat-bottom solution of a less-dense shelf water with respect to the slope water is little modified by the presence of a step. But in the case of denser shelf water, the solution shows the detachment of a spillage when the depth ratio across the step is greater than two-resembling some regional observations. In the frictional model,

the wind generted entrainment is demonstrated to provide a virtual momentum source to maintain the along-front current shear against friction and thus can account for the persistence of the front through the winter season. The entrainment also decreases the bouyancy of the exported shelf water, the distribution of which however, varies greatly with the external parameters. For parameter values applicable to the Middle Atlantic Bight, an inflection point, corresponding to a weakened lateral bouyance gradient, is predicted above the front, consistent with observation.

10972 **Principal nonseasonal modes of variation of global sea surface temperature.** Hsiung, J.; Newell, R.E. (Department of Earth, Atmospheric and Planetary Sciences, Massachusetts Institute of Technology, Cambridge, MA 02139). *Journal of Physical Oceanography;* 13: No. 10, 1957-1976(Oct 1983). Contract AC02-76EV12195.

Thirty-five million ship reports for the period 1949-79 have been used to construct global, monthly-mean sea surface temperature fields for 5° x 5° latitude-longitude regions. The monthly means have been subjected to eigenvector analysis to bring out the nonseasonal modes of variation. The El Nino mode is the most important and its eigenvector time series is identical to that found previously by Weare et al. for the Pacific alone. Addition of data from the other oceans adds unexplained variance so that the percentage of the variance explained by the El Nino mode is smaller in the global case than for the Pacific alone. The second most important eigenvector pattern shows evidence of a cooling trend for the North Pacific and North Atlantic in the 1964-79 period. This is in agreement with previous work on zonal-mean sea surface temperature by the authors, with recent work on the North Pacific by Douglas et al. and with a polar-cap cooling in the lower troposphere for the same period reported by Boer and Higuchi.

10973 **Near-surface measurements of quasi-Lagrangian velocities in open water.** Churchill, J.H.; Csanady, G.T. (Woods Hole Oceanographic Institution, Woods Hole, MA 02543). *Journal of Physical Oceanography;* 13: No. 9, 1669-1749(Sep 1983). Contract AC02-79EV10005.

Near-surface water velocities have been measured in the coastal zone of Lake Huron and Cape Cod Bay by tracking drifters and drogues using acoustic travel time and compass sighting techniques. The near-surface current, defined as the velocity of near-surface drifters and drogues relative to a drogue set at 1.8 m, varied on the depth scale on the order of 1 m, and was directed nearly parallel to the wind and to predominant wave propagation velocity. Velocity profiles were logarithmic with depth to order 1 m depth, and realistic values of stress were calculated using a law of the wall formula and a Karmans constant of 0.4. Inferred roughness lengths were of the order of 30 cm. Anomalously high values of wind stress were inferred from velocity profiles observed during conditions of light wind and steady swell. These may be due to the similarity of Stokes drift distribution to turbulent shear flow profiles.

10974 **(BNL—33848) Type II successful supernovae, the anatomy of shocks: neutrino emission and the adiabatic index.** Kahana, S.; Baron, E.; Cooperstein, J. (Brookhaven National Lab., Upton, NY (USA); State Univ. of New York, Stony Brook (USA)). 1983. Contract AC02-76CH00016. 21p. (CONF-8311120—1). NTIS, PC A02/MF A01. Order Number DE84002858.

From Workshop on stellar collapse; Toulouse, France (7 Nov 1983).

Portions are illegible in microfiche products.

Hydrodynamic calculations of stellar collapse in Type II Supernova are described using a variable stiffness and compressibility for the nuclear equation of state at high density. Initial models employing a relatively small mass core with low central entropy are necessary to achieve viable shocks; near success the models are sensitive to both neutrino emission and the high density equation of state. The treatment of neutrino production and transport is sketched and recent results reported.

10975 **(CEA-CONF—6683) Large scale inhomogeneities and galaxy statistics.** Schaeffer, R. (CEA Centre d'Etudes Nucleaires de Saclay, 91 - Gif-sur-Yvette (France)). Mar 1983. 4p. (CONF-830377—4). NTIS (US Sales Only), PC A02/MF A01. Order Number DE84750267.

From 18. Rencontre de Moriond conference; La Plagne, France (19 Mar 1983).

The density fluctuations associated with the formation of large scale cosmic pancake-like and filamentary structures can be evaluated (1) using the Zeldovich approximation (2) for the evolution of non-linear inhomogeneities in the expanding universe. At the scale introduced by these non-linear density fluctuations due to pancakes, the standard scale-invariant correlation function is modified.

10976 **(EFI—521(8)-82) Stochastic processes and the dynamics of massive black holes.** Gurzadyan, V.G. (Erevanskij Fizicheskij Inst. (USSR)). 1982. 13p. NTIS (US Sales Only), PC A02/MF A01. Order Number DE83704472.

Microfiche only, copy does not permit paper copy reproduction3 refs.

The role of stochastic processes in the dynamics of massive black hole situated at the centre of a compact star cluster is discussed. It is shown that under certain conditions the black hole can escape from the centre of mass of the system and has to execute Brownian motion influenced by fluctuating stellar perturbations. A massive black hole practically may not be localized at the centre of a globular cluster and has to move within the cluster core influenced by stochastic perturbations of stars. The stochastic behaviour of the black hole is suppressed in compact galactic nuclei, but may become sufficient in nuclei with mean stellar concentration less than 10^4-10^5 ps^{-3}.

10977 **(KFKI—1983-28) Solar wind stagnation near comets.** Galeev, A.A.; Cravens, T.E.; Gombosi, T.I. (Hungarian Academy of Sciences, Budapest. Central Research Inst. for Physics). Mar 1983. 13p. NTIS (US Sales Only), PC A02/MF A01. Order Number DE83704473.

The nature of the solar wind flow near comets is examined analytically. In particular, the typical values for the stagnation pressure and magnetic barrier strength are estimated, taking into account the magnetic field line tension and the charge exchange cooling of the mass loaded solar wind. Knowledge of the strength of the magnetic barrier is required in order to determine the location of the contact discontinuity which separates the contaminated solar wind plasma and the outflowing plasma of the cometary ionosphere.

10978 **(LA-UR—83-3621) Observations of the interstellar ice grain feature in the Taurus molecular clouds.** Whittet, D.C.B.; Bode, H.F.; Longmore, A.J.; Baines, D.W.T.; Evans, A. (Preston Polytechnic (UK). Div. of Physics and Astronomy; Los Alamos National Lab., NM (USA); UKIRT, Hilo, HI (USA); Royal Observatory, Edinburgh (UK); Keele Univ. (UK)). 1983. Contract W-7405-ENG-36. 9p. (CONF-8307110—1). NTIS, PC A02/MF A01. Order Number DE84004316.

From Laboratory and observational infrared spectra of interstellar dust conference; Hilo, HI, USA (18 Jul 1983).

Although water ice was originally proposed as a major constituent of the interstellar grain population (e.g. Oort and van de Hulst, 1946), the advent of infrared astronomy has shown that the expected absorption due to O-H stretching vibrations at 3 μm is illusive. Observations have in fact revealed that the carrier of this feature is apparently restricted to regions deep within dense molecular clouds (Merrill et al., 1976; Willner et al., 1982). However, the exact carrier of this feature is still controversial, and many questions remain as to the conditions required for its appearance. It is also uncertain whether it is restricted to circumstellar shells, rather than the general cloud medium. Detailed discussion of the 3 μm band properties is given elsewhere in this volume. 15 references, 4 figures.

10979 **(LUNFD6/NFAS—1003/1-130(1983)) Physical processes in young supernovae.** Fransson, C. (Lund Univ. (Sweden). Institutionen foer Astronomi). Dec 1982. 27p. (In Swedish). NTIS (US Sales Only), PC A03/MF A01. Order Number DE83704474.

This thesis consists of four papers on the physical processes in expanding type II supernova envelopes and their environment. Recent observations have shown that type II supernovae are surrounded by a large amount of circumstellar gas, and most of the thesis discusses the interaction of the expanding supernova envelope with this gas. It is found that the resulting shock wave will emit most of its energy as Comptonized EUV radiation plus soft X-rays. This radiation ionizes and heats the circumstellar gas as well as the supernova envelope. The conversion of the Comptonized EUV emission to line emission as a function of time provides an important test of the model. To compare with the UV observations, the line profiles from the various regions are calculated. The X-ray emission and its absorption by the circumstellar gas are shown to give important information on both the shock wave and the environment. Paper I deals with the structure of the shockwave, its emission and absorption of the X-rays by the circumstellar gas. In Paper II the line profiles are calculated and are compared with the observations. Paper III discussed the UV observations, and a simplified analysis of the physical conditions in the gas is given. Finally in paper IV the X-ray emission from the shock, the structure of the envelope and the strengths of the UV emission lines as a function of time are studied.

10980 **(TRITA-EPP—82-09) Plasma physical aspects of the solar cycle.** Raadu, M.A. (Royal Inst. of Tech., Stockholm (Sweden). Dept. of Plasma Physics). Aug 1982. 18p. (CONF-8205220—1). NTIS (US Sales Only), PC A02/MF A01. Order Number DE83704460.

From STP symposium; Ottawa, Canada (1 May 1982).

Mass motions below the photosphere drive the solar cycle which is association with variations in the magnetic field structure and accompanying phenomena. In addition to semi-empirical models, dynamo theories have been used to explain the solar cycle. The emergence of magnetic field generated by these mechanisms and its expansions into the corona involves many plasma physical processes. Magnetic buoyancy aids the expulsion of magnetic flux. The corona may respond dynamically or by continually adjusting to a quasi-static force-free or pressure-balanced equilibrium. The formation and disruption of current sheets is significant for the overall structure of the coronal magnetic field and the physics of quiescent prominences. The corona has a fine structure consisting of magnetic loops. The structure and stability of these are important as they are one of the underlying elements which make up the corona.

10981 **Upper limit on flux of cosmic-ray monopoles obtained with a three-loop superconductive detector.** Cabrera, B.; Taber, M.; Gardner, R.; Bourg, J. (Physics Department, Stanford University, Stanford, California 94305). *Physical Review Letters;* **51**: No. 21, 1933-1936(21 Nov 1983). Contract AM03-76SF00326.

A three-loop superconductive monopole detector has been continuously operated for over 150 days. Its sensing area is 476 cm^2 (71 cm^2 loop area and 405 cm^2 near-miss area) for double coincidence events. The data, which contain no candidate events, set an upper limit of 3.7×10^{-11} cm^{-2} sec^{-1} sr^{-1} (90% C.L.) for monopoles of any mass and at any velocity passing through the Earth's surface.

10982 **Halley's Comet: AD 1986 to 2647 BC.** Brady, J.L. (Lawrence Livermore National Lab., CA). *Journal of the British Astronomical Association;* **92**: No. 5, 209-215(1982). Contract W-7405-ENG-48.

In earlier predictions of the apparitions of Halley's Comet, a three- or four-day error, always with the same sign, has appeared consistently. By adding a secular term to the Newtonian equations of motion it has been possible to link the apparitions of 1910, 1835, 1759 and 1682 with a continuous numerical integration. This backward integration not only represents the last four apparitions but also remains remarkably close to the observed times of perihelion passage for more than 2000 years. The times of perihelion passage are compared to observed or derived dates back to 87 BC, and apparitions prior to 87 BC are compared with historical references whenever they could be found. The starting values of this long integration have been used to make a forward integration and to predict the 1986 return.

10985 **(LA-UR—83-2515) Computer simulation of reconnection in planetary magnetospheres.** Birn, J. (Los Alamos National Lab., NM (USA)). 1983. Contract W-7405-ENG-36. 17p. (CONF-8308148—1). NTIS, PC A02/MF A01. Order Number DE84001389.

From International Astronomical Union symposium; College Park, MD, USA (8 Aug 1983).

Portions are illegible in microfiche products.

The earth's magnetosphere provides an ideal opportunity to model reconnection in well known geometries that are close enough to the idealized analytic models to make a comparison of the computer models with analytic theory meaningful. In addition more detailed, even three-dimensional, models can be used for a comparison with extended data from in situ observations. The computer studies have basically confirmed the reconnection picture that was based on two-dimensional steady state models and linear analytic theory. The three-dimensional models in particular have also added a lot more information on the reconnection process and the structure of flow, magnetic fields, and currents including many features that are consistent with observations and empirical models of geomagnetic substorms.

10986 **(LA-UR—83-3239) Particle and field signatures of substorms in the near magnetotail.** Baker, D.N. (Los Alamos National Lab., NM (USA)). 1983. Contract W-7405-ENG-36. 44p. (CONF-8310229—7). NTIS, PC A03/MF A01. Order Number DE84003777.

From Chapman conference on magnetic reconnection; Los Alamos, NM, USA (3 Oct 1983).

Portions are illegible in microfiche products.

The near-earth magnetotail ($10 \leqq r \leqq 20$ R/sub E/) portion of the terrestrial magnetosphere is very likely the region in which magnetospheric substorms are initiated and it is in this location that substorm-related magnetic reconnection appears to occur. An observational advantage compared to other astrophysical regions is that the near magnetotail can be nearly continuously monitored by spacecraft that are relatively fixed in location. Observations of magnetic fields and plasma distribution functions in the neartail reveal a very regular and predictable sequence of variation in association with substorms. These data, considered in a global context, provide very strong evidence for the neutral line substorm model and, thus, for the regular occurrence of magnetic reconnection in the near-earth magnetotail during substorms.

10987 **(RL—82-048) Electron distributions in the plasmas of the earth's magnetosphere - an experiment for AMPTE-UKS.** Hall, D.S.; Chaloner, C.P.; Shah, H. (Rutherford Appleton Lab., Chilton (UK)). Jun 1982. 54p. NTIS (US Sales Only), PC A04/MF A01. Order Number DE83704475.

The objectives, measurement techniques and technical requirements of the electron experiment to be included in the UK-Satellite of the Active Magnetospheric Particle Explorer (AMPTE) mission are described under sections entitled; experiment objectives, experiment technique, mechanical, electrical, command and data handling requirements, ground support equipment interfaces, test procedures, and special requirements. In appendices the experiment controller and the measurement sequence are shown.

10988 **(TRITA-EPP—82-08) Inductive electric fields in the magnetotail and their relation to auroral and substorm phenomena.** Pellinen, R.J.; Heikkila, W.J. (Royal Inst. of Tech., Stockholm (Sweden). Dept. of Plasma Physics). Nov 1982. 113p. NTIS (US Sales Only), PC A06/MF A01. Order Number DE83704546.

The paper reviews the importance of inductive electric fields in explaining different magnetospheric and auroral phenomena during moderately and highly distrubed conditions. Quiet-time particle energization and temporal development of the tail structure during the substorm growth phase are explained by the presence of a large-scale elctrostatic field directed from dawn to dusk over the magentotail. Conservation of the first adiabatic invariant in the neutral sheet with a small value of the gradient in the magnetic field implies that the longitudical energy increases at each crossing of the neutral sheet. At a certain moment, this may result in a rapid local growth of the current and in an instability that triggers the onset. During the growth phase energy is stored in the magnetic field, since the energy density in the electric field is negligible compared to that of the magnetic field. An analytical model is described in which the characteristic observations of a substorm onset are taken into account. One major feature is that the triggering is confined to a small local time sector. During moderate disturbances, the induction fields in the magnetotail are stronger by at least one order of magnitude than the average cross-tail field. Temporal development of the disturbed area results in X- and O-type neutral lines. Particles near to these neutral lines are energized to over 1 MeV energies within a few seconds, due to an effective combination of linear and betatron acceleration. The rotational property of the induction field promotes energization in a restricted area wiht dimensions equivalent to a few Earth's radii. The model also predicts the existence of highly localized cable-type field-aligned currents appearing on the eastern and western edges of the expanding auroral bulge.

10989 **(BNL—33473) Two accel/decel experiments: electron capture for 6 to 20 MeV S^{10-16+} on He and Ar and interference effects in MO K x-ray spectra for 5, 10, and 20 MeV Cl^{16+} on Ar.** Johnson, B.M. (Brookhaven National Lab., Upton, NY (USA)). 1983. Contract AC02-76CH00016. 4p. (CONF-830390—3). NTIS, PC A02/MF A01. Order Number DE84002851.

From US/Japanese seminar on physics of highly ionized ions produced in heavy ion collisions; Honolulu, HI, USA (14 Mar 1983).

The recent development of four-stage accel-decel operation of the dual MP tandem accelerators at Brookhaven National Laboratory has made it possible to extend atomic collision experiments over an unprecedented range of high charge states and low velocities. Briefly, this mode of operation uses the first MP tandem conventionally for two stages of acceleration, then with a negative terminal voltage the second MP tandem provides a third stage of acceleration to high velocity, stripping to high charge state and a final stage of deceleration to low velocity. Details of operation and recent upgrades of the facility were reviewed earlier. An overview of present capabilities and the results of two experimental studies using accel-decel beams are presented here.

10990 **(DOE/ER/05776—12) Spectroscopy of surface adsorbed molecules. Progress report, May 1, 1983-April 30, 1984.** Coleman, R.V. (Virginia Univ., Charlottesville (USA). Dept. of Physics). 1984. Contract AS05-78ER05776. 8p. NTIS, PC A02/MF A01. Order Number DE84005254.

Progress is reported on the understanding and control of the barrier properties for applications to inelastic electron tunneling spectroscopy. A correlation of the barrier behavior with molecular reactivity and pi-delocalization has led to an initial understanding of the large barrier perturbations introduced by some dopant molecules.

10991 **(DOE/ER/13012—2) Multilevel relaxation phenomena and population trappings. Progress report, July 1, 1982-June 30, 1984.** Hioe, F.T. (Saint John Fisher Coll., Rochester, NY (USA)). Jan 1984. Contract AC02-82ER13012. 14p. NTIS, PC A02/MF A01. Order Number DE84005270.

We have made significant advances in our understanding of multiphoton and multilevel coherent effects in laser induced excitation of atomic systems by obtaining a number of fundamental analytic solutions to these problems. In particular, we have obtained the following: an explicit analytic solution to the problem of multilevel atomic excitation by adiabatic rapid passages; analytic solutions for a class of nonadiabatic excitation processes by specific types of amplitude and phase modulated laser pulses; analytic solutions for a class of multiple soliton propagation problems; an analytic solution which gives one of very few known analytic theories describing the evolution of an atom excited by two amplitude modulated laser pulses differing by a pi/2 phase; and analytic results on the statistical mean motion of an atom when it interacts with a quantized radiation field.

10992 (INIS-mf—8299, pp 129-130) **Upper limit for the axion decay of ortho-positronium.** Wahl, H.; Habs, D.; Kroth, R.; Schwalm, D.; Specht, H.J. (Heidelberg Univ. (Germany, F.R.). Physikalisches Inst.); Adelberger, E. (Washington Univ., Seattle (USA)); Metag, V. (Giessen Univ. (Germany, F.R.). 2. Physikalisches Inst.); Simon, R.S. In Max-Planck-Institut fuer Kernphyik: Annual report 1982.

The existence of a new pseudoscalar boson, called axion, has been proposed to avoid P and CP violations in the standard model of strong interactions. If the axion mass msub(a) is smaller than twice the electron mass msub(e), then orthopositronium may decay into an axion and a monoenergetic photon. As the axion would be only weakly interacting we tried to detect the monoenergetic photon instead. We developed a $^3S_1$ positronium source where the positrons from the decay of ^{68}Ge pass through a thin plastic scintillator and then stop in SiO_2 powder. The Darmstadt-Heidelberg crystal ball was used to discriminate against the normal Ps $^3S_1$ -> 3γ decay and to look for the rare events where one and only one of the 162 NaI modules fired in delayed coincidence with the plastic scintillator. No "axion line" was observed, and from the statistical accuracy of our data accumulated so far we calculate an upper limit for 5×10^{-7} for the branching ratio relative to the 3γ decay.

10993 (INIS-mf—8299, pp 130-132) **K-shell excitation via K-L charge transfer in slow Kr-Kr and Xe-Xe collisions.** Justiniano, E.; Schmidt-Boecking, H.; Schuch, R.; Hoffmann, R.; Schad, W. (Max-Planck-Institut fuer Kernphysik, Heidelberg (Germany, F.R.)); Mokler, P.H.; Bosch, F.; Schoenfeldt, W.A.; Stachura, Z. In Max-Planck-Institut fuer Kernphyik: Annual report 1982.

We have measured K vacancy production probabilities with decelerated highly charged Krsup(q+) (2.8 MeV/u) on Kr and Xesup(q+) (3.6 MeV/u) on Xe by particle-photon coincidences. The impact-parameter-dependent probabilities reveal a dramatic change in shape and absolute height as soon as the projectile bears L shell vacancies. Comparisons with calculations show that K to L shell charge transfer can be described even in the heavy collision

system Xe on Xe by 2pπ-2psigma rotational coupling when the relativistc energy splitting is taken into account.

10994 (INIS-mf—8299, pp 132-133) **Interference effect in the impact parameter dependence of K-K charge transfer in slow S-Ar collisions.** Schmidt-Boecking, H. (Frankfurt Univ. (Germany, F.R.). Inst. fuer Kernphysik); Schulz, M.; Schuch, R.; Justiniano, E.; Ingwersen, H.; Specht, H.J. 1983. (In German). NTIS (US Sales Only), PC A11/MF A01.

In Max-Planck-Institut fuer Kernphyik: Annual report 1982.

The impact parameter dependence of the transfer probability of a target K electron into the projectile K shell was measured in 4.7, 7.9, 16, and 32 MeV S^{15+} on Ar collisions. The transfer probability shows an interference structure as a function of impact parameter which allows a very sensitive test of the models for K-K charge transfer.

10995 (INIS-mf—8299, pp 133-134) **Multiple ionisation and electron capture in 2 MeV/u Brsup(n+) -> Ne collisions.** Kelbch, S.; Ullrich, J.; Schmidt-Boecking, H. (Frankfurt Univ. (Germany, F.R.). Inst. fuer Kernphysik); Schuch, R.; Ingwersen, H. 1983. (In German). NTIS (US Sales Only), PC A11/MF A01.

In Max-Planck-Institut fuer Kernphyik: Annual report 1982.

The recoil ion production cross sections in 2 MeV/u Brsup(n+) Nesup(o) → Brsup(n+) + Nesup(q+) were measured using a projectile-recoil ion coincidence technique, where the final charge states of both collision partners were detected simultaneously. The assumption of binominal statistics for the multiple ionisation of the recoil ions rendered the determination of the ionisation probabilities from the related cross sections. It could be deduced from the experimental data that Ne-K capture dominates.

10996 (INIS-mf—8299, pp 134-135) **Interference effects in the quasimolecular K-radiation induced in collisions of hydrogenlike ions.** Schmidt-Boecking, H. (Frankfurt Univ. (Germany, F.R.). In Max-Planck-Institut fuer Kernphyik: Annual report 1982.

The impact-parameter-dependent emission probabilities of quasimolecular X-rays were measured in collisions of 5, 10, and 20 MeV Cl^{10+} on Ar and 16 MeV S^{15+} on Ar. The coincident energy spectra of the quasimolecular K radiation show a clear impact-parameter-dependent structure which is in good agreement with calculations taking into account the interference of 1ssigma decay amplitudes on the incoming and outgoing halves of the trajectory.

10997 (INIS-mf—8299, pp 135-137) **L-Shell ionisation in energetic ion-atom-collisions.** Jitschin, W.; Hippler, R.; Shanker, R.; Lutz, H.L. (Bielefeld Univ. (Germany, F.R.). Fakultaet fuer Physik); Schuch, R. 1983. (In German). NTIS (US Sales Only), PC A11/MF A01.

In Max-Planck-Institut fuer Kernphyik: Annual report 1982.

A comprehensive study of L shell ionisation of heavy target atoms ($54 <= Z_2 <= 92$) by various projectiles ($1 <= Z_1 <= 79$) has been performed. The main aspect of the investigation is differences in the ionisation cross sections of the magnetic substates (alignment) and of the L subshells. These quantities can be measured with high accuracy and thus allow a sensitive test of ionisation theories.

10998 (INIS-mf—8299, pp 137-138) **Impact parameter dependence of the A_{20}, A_{21}, A_{22} alignment parameters of the Lsub(III)-shell investigated in collisions of 16 MeV α-particles on Dy.** Schmidt-Boecking, H. (Frankfurt Univ. (Germany, F.R.). Inst. fuer Kernphysik); Konrad, J.; Hoffmann, R.; Schuch, R.; Ziegler, F. 1983. (In German). NTIS (US Sales Only), PC A11/MF A01.

In Max-Planck-Institut fuer Kernphyik: Annual report 1982.

The A_{20}, A_{21}, A_{22} alignment parameters of the Lsub(III) shell were determined from the angular distribution of the Lsub(l) line by a coincidence measurement between scattered particles and X-rays in the impact parameter (b) region from 100 to 4000 fm. The previously found strong deviations of A_{20} from the prediction of the SCA at small b were confirmed by these experiments. A_{21} is nearly independent of b, A_{22} is zero at small b and decreases at b > 1000 fm.

10999 (INIS-mf—8299, pp 138-139) **Influence of the nuclear reaction time onto the delta-electron emission studied by the reaction J → Au,Bi at 795 and 840 MeV.** Herath-Banda, M. (Vanderbilt Univ., Nashville, TN (USA)); Kozhuharov, C. (Gesellschaft fuer Schwerionenforschung m.b.H., Darmstadt (Germany, F.R.)); Koenig, W.; Lutz, N.; Martin, B.; Povh, B.; Skapa, H.; Soltani, J. 1983. (In German). NTIS (US Sales Only), PC A11/MF A01.

In Max-Planck-Institut fuer Kernphyik: Annual report 1982.

Spectra of high energetic atomic electrons (delta electrons) were recorded in the case of quasielastic and deep inelastic scattering of J → Au and Bi at incident energies of 6.25 and 6.6 MeV/u, respectively. Total kinetic energy, mass difference, and total mass of the binary reaction products were measured via kinematical coincidences by a parallel plate avalanche counter with angular geometry (THETA = 10°-60°). A distinct change of the slope of the coincident electron spectrum is expected as a function of the nuclear reaction. The data analysis is still in progress.

11000 (INIS-mf—8299, pp 139-141) **Study of binding energies and electron densities in superheavy quasiatoms by means of delta-ray spectroscopy.** Herath-Banda, M.; Ramayya, A.V. (Vanderbilt Univ., Nashville, TN (USA)); Kozhuharov, C. (Gesellschaft fuer Schwerionenforschung m.b.H., Darmstadt (Germany, F.R.)); Koenig, W.; Lutz, N.; Martin, B.; Povh, B.; Skapa, H.; Soltani, J. 1983. (In German). NTIS (US Sales Only), PC A11/MF A01.

In Max-Planck-Institut fuer Kernphyik: Annual report 1982.

The emission of high energetic electrons (50-1000 keV) was measured for the systems Br → Pb, U, J → Au, Bi, and Au → U. From electron K X-ray coincidences K-L binding energy differences of the quasiatom were determined. Whereas in the range Zsub(u) < or approx. 145 the results show good agreement with calculations performed in the adiabatic approximation, the 1s-2s binding energy difference obtained for the heaviest system (Zsub(u) = 171) is already at 3.2 MeV/u incident energy significantly smaller. The impact parameter dependence of the emission from the quasiatomic K shell of the Au-U system indicates in addition a distinctly smaller increase of the electron density near the nuclei than expected.

11001 (INIS-mf—8299, pp 154) **Influence of statistical fluctuations of heavy ion cross sections on the spectrum of atomically created positrons.** Tomoda, T. (Technische Univ. 11002 **(INIS-mf—8632) Fundamental aspects of laser and ion-beam interactions with solid surfaces.** Wang, Z.L. (Rijksuniversiteit Utrecht (Netherlands)). 13 Sep 1982. 131p. NTIS (US Sales Only), PC A07/MF A01. Order Number DE83704731.

In the first part of the thesis laser-beam interactions with solid surfaces are discussed. In the second part ion-beam interactions with solid surfaces are discussed and mainly the mixing of atoms due to ion bombardment. A study of ion-beam mixing of Cu-Au and Cu-W systems is described in order to illustrate the mechanism for ion beam mixing. As Cu-Au are miscible whereas Cu-W systems are not, and both systems have comparable mass numbers, comparison provides a test for current theories on ion-beam mixing. The results of experiments where 300 keV Kr^{4+} ion-bombardment at a dose of $5x10^{15}$ cm^{-2} has been applied to initiate mixing of a single layer structure and sandwich samples for both systems are described. Room temperature irradiations with a dose of $5x10^{15}$ cm^{-2} show that Cu-Au mix readily, whereas a small mixing effect is observed for Cu-W systems. A comparable amount of mixing for

Cu-Au induced by laser or ion beams is found whereas no mixing of Cu-W induced by laser irradiation is observed, which is in agreement with the criteria for formation of metastable solid solutions due to pulsed laser treatment.

11003 **(INIS-mf—8637) Non vertical vibronic transitions in atom molecule collisions.** Klomp, U.C. (Amsterdam Univ. (Netherlands)). 3 Nov 1982. 131p. NTIS (US Sales Only), PC A07/MF A01. Order Number DE83704725.

This thesis is mainly devoted to an experimental and theoretical study on vibronic transitions which occur in collisions between an alkali atom and several diatomic molecules. An experimental study on electron and ion production in repulsive Cs-CO and Cs-N_2 collisions, and in Cs-NO and Cs-O_2 non-repulsive collisions is presented. The experimental data are discussed in terms of some existing models. It is clear that a new consistent theory on vibronic transitions is needed to explain the experimental data. Such a theory is presented, and it is shown that some existing models are limiting cases of this theory. An experimental study on the relative probabilities for ion and electron production in collisions between a Na, K or Cs atom and an O_2 or NO molecule is also described. These experiments suggest that the incident velocity of the alkali atoms has a predominant influence on the relative probabilities for ion and electron production in these collisions.

11004 **(INIS-mf—8651) High resolution studies of barium Rydberg states.** Eliel, E.R. (Vrije Univ., Amsterdam (Netherlands)). 8 Sep 1982. 192p. NTIS (US Sales Only), PC A09/MF A01. Order Number DE83704726.

The subtle structure of Rydberg states of barium with orbital angular momentum 0, 1, 2 and 3 is investigated. Some aspects of atomic theory for a configuration with two valence electrons are reviewed. The Multi-Channel Quantum Defect Theory (MQDT) is concisely introduced as a convenient way to describe interactions between Rydberg series. Three high-resolution UV studies are presented. The first two, presenting results on a transition in indium and europium serve as an illustration of the frequency doubling technique. The third study is of hyperfine structure and isotope shifts in low-lying p states in Sr and Ba. An extensive study of the 6snp and 6snf Rydberg states of barium is presented with particular emphasis on the 6snf states. It is shown that the level structure cannot be fully explained with the model introduced earlier. Rather an effective two-body spin-orbit interaction has to be introduced to account for the observed splittings, illustrating that high resolution studies on Rydberg states offer an unique opportunity to determine the importance of such effects. Finally, the 6sns and 6snd series are considered. The hyperfine induced isotope shift in the simple excitation spectra to 6sns $^1S_0$ is discussed and attention is paid to series perturbers. It is shown that level mixing parameters can easily be extracted from the experimental data.

11005 **(INIS-mf—8654) Avalanches in insulating gases.** Verhaart, H.F.A. (Technische Hogeschool Eindhoven (Netherlands)). 14 Sep 1982. 120p. NTIS (US Sales Only), PC A06/MF A01. Order Number DE83704727.

Avalanches of charged particles in gases are often studied with the "electrical method", the measurement of the waveform of the current in the external circuit. In this thesis a substantial improvement of the time resolution of the measuring setup, to be used for the electrical method, is reported. The avalanche is started by an N_2-laser with a pulse duration of only 0.6 ns. With this laser it is possible to release a high number of primary electrons (some 10^8) which makes it possible to obtain sizeable signals, even at low E/p values. With the setup it is possible to analyze current waveforms with a time resolution down to 1.4 ns, determined by both the laser and the measuring system. Furthermore it is possible to distinguish between the current caused by the electrons and the current caused by the ions in the avalanche and to monitor these currents simultaneously. Avalanche currents are measured in N_2, CO_2, O_2, H_2O, air of varying humidity, SF_6 and SF_6/N_2 mixtures. Depending on the nature of the gas and the experimental conditions, processes as diffusion, ionization, attachment, detachment, conversion and secondary emission are observed. Values of parameters with which these processes can be described, are derived from an analysis of the current waveforms. For this analysis already published theories and new theories described in this thesis are used. The drift velocity of both the electrons and the ions could be easily determined from measured avalanche currents. Special attention is paid to avalanches in air becasue of the practical importance of air insulation.

11006 **(INIS-mf—8658) Influence of collisions with noble gases on spectral lines of hydrogen isotopes.** Hermans, P. (Rijksuniversiteit Leiden (Netherlands)). 10 Nov 1982. 125p. NTIS (US Sales Only), PC A06/MF A01. Order Number DE83704728.

In this thesis measurements on the collisional broadening of the depolarized Rayleigh line and the broadening and shift of the rotational Raman lines (radiative transitions 0→2, 1→3 and 2→4) are presented. The experiments were carried out as a function of temperature from 23 K to 311 K for three systems, viz. H_2-He, H_2-Ne and H_2-Ar. Also results of close coupled calculations on the broadening and shift are presented as a function of temperature for the four spectral lines mentioned. The calculations were performed for two systems, viz H_2-He and H_2-Ne. For the system H_2-He two interaction potentials were used as a starting point, and a comparison between these potentials was made. Now that it is possible to do computations on effects related to the non-spherical interaction of the pure hydrogen isotopes, the availability of experimental data is of great importance. Many experiments on these effects have been performed over the last two decades, but their results are scattered throughout the literature. Therefore, in the last chapter of this thesis the experimental results for the pure hydrogen isotopes and in mixtures with noble gases are compiled to serve as comparing material for the calculations. The presentation is such that a direct comparison with calculations is facilitated.

11007 **(INIS-mf—8662) Charge and spin density in s-stable rare earth intermetallic compounds.** de Graaf, H. (Rijksuniversiteit Leiden (Netherlands)). 1 Dec 1982. 173p. NTIS (US Sales Only), PC A08/MF A01. Order Number DE83704729.

This thesis deals with a study of the electronic structure of rare earth intermetallic compounds, in particular the electronic charge and spin density distribution. These are closely related to the properties of the rare earth ions, which carry the partly filled 4f shell. In chapter 1 a survey of the theory of hyperfine interaction as far as it has a bearing on the Moessbauer effect of ^{155}Gd and ^{151}Eu is given. Also some details of the Moessbauer spectra, which have practical importance are discussed. In chapter 2 the experimental set-up is described. Special attention is paid to the gamma radiation source and gamma detection requirements. In chapter 3 the author introduces the theoretical framework which will be used to interpret the measurements. In chapter 4 the results of the ^{155}Gd Moessbauer measurements are presented. Also it is discussed how the result can be understood in terms of the charge and spin density in rare earth intermetallic compounds. In order to lend support to the picture emerging from the previous chapter, in chapter 5 the conduction electron band structure of some representative Gd intermetallics is computed with an approximate semi-empirical LCAO method. The results are compared with those from chapter 4. Finally, in chapter 6, the ^{151}Eu resonance is used to investigate the temperature dependence of the hyperfine field and line width in the Eu intermetallic compounds Eu_2Mg_{17} and $EuMg_5$.

11011 **Exciton kinetics in condensed rare gases.** Hitachi, A. (Radiation Laboratory, University of Notre Dame, Notre Dame, Indiana 46556). *Journal of Chemical Physics;* **80**: No. 2, 745-748(15 Jan 1984).

An attempt has been made to explain large rate constants for Penning-type ionization in condensed rare gas mixtures. Excitons are treated as particles moving rapidly in condensed media with a mass similar to the electron mass. A formula for Penning ionization of atom collisions induced by a dipole—dipole interaction gives cross sections of the correct order of magnitude.

11012 **Bond length and electronic structure of V_2.** Langridge-Smith, P.R.R.; Morse, M.D.; Hansen, G.P.; Smalley, R.E.; Merer, A.J. (Rice Quantum Institute and Department of Chemistry, Rice University, Houston, Texas 77251). *Journal of Chemical Physics;* **80**: No. 2, 593-600(15 Jan 1984).

We report of the first gas-phase electronic spectrum of V_2. The dimer was generated in an expansion cooled molecular beam by laser vaporization of vanadium metal. Using the technique of resonant two photon ionization spectroscopy a strong band system with origin near 7000 A was observed. Rotationally resolved spectra of this band system conclusively demonstrate that the transition is of the type ^{3}Pi/sub u/(a)←$^3\Sigma^-$/sub g/(a), and we assign the $^3\Sigma^-$/sub g/ state as the ground electronic state of V_2. The short ground state bond length r/sub e//sup double-prime/ = 1.77 A and high vibrational frequency ω/sub e//sup double-prime/ = 535 cm^{-1} are indicative of extensive 3d-orbital participation in the bonding of this molecule. The unusual case (a) coupling and large second-order spin-orbit splitting observed in the $^3\Sigma^-$/sub g/ state implies that the ground state electronic configuration contains a half-filled π(3d) or δ (3d) orbital. The most plausible valence configuration consistent with the data is σ/sub g/(3d)$^2\pi$/sub u/(3d)$^+$ σ/sub g/(4s)$^2\delta$/sub g/(3d)^2. In the excited state there is strong evidence of predissociation occuring for levels higher than 14 872 cm^{-1} above the ground state, thus providing an upper bound of 1.85 eV for the dissociation energy of V_2.

11013 **Resonant multiphoton ionization of NO via the A $^2u^+$ state: Photoelectron spectra and angular distributions.** White, M.G.; Chupka, W.A.; Seaver, M.; Woodward, A.; Colson, S.D. (Chemistry Department, Brookhaven National Laboratory, Upton, New York 11973). *Journal of Chemical Physics;* **80**: No. 2, 678-686(15 Jan 1984).

Photoelectron spectra resulting from the two-photon resonant, four-photon ionization of NO via the A $^2\Sigma^+$ state are reported for several rotational levels in the A, v = 0 manifold. The observed final ionic state vibrational distributions are found to be consistent with and confirm spectroscopic studies which have assigned intense features in the four-photon A state MPI spectrum with accidental resonances in the energy range of the third photon. The upper states in the strong accidental double resonance transitions are assigned to Rydberg vibronic levels which are strongly perturbed by nearby valence states. Photoelectron angular distributions were also measured for two vibronic transitions and these are interpreted on the basis of a simple, one-electron description of the ionization step.

11014 **Transition probability and collision broadening of the 1.3-μm transition of atomic iodine.** Engleman, R. Jr.; Palmer, B.A.; Davis, S.J. (Chemistry Division, Los Alamos National Laboratory, University of California, Los Alamos, New Mexico 87545). *Journal of the Optical Society of America;* **73**: No. 11, 1585-1589(Nov 1983).

We have made direct absorption measurements of the transition probability and collision broadening of the 1.3-μm ^{2}P/sub 1/2/ → ^{2}P/sub 3/2/ transition of atomic iodine. Atomic iodine was generated in heated iodine vapor, and the spectrum was obtained with a Fourier-transform spectrometer. A transition probability was measured that corresponds to a ^{2}P/sub 1/2/ radiative lifetime of 125 msec. Broadening coefficients of 1.4, 1.7, 3.1, and 1.3 MHz/Torr at 1000 K were found for argon, oxygen, molecular iodine, and atomic iodine, respectively. The intensity of the (2, 4) forbidden electric-quadrupole line was measured and yielded the ratio of electric-quadrupole to magnetic dipole transition probability of 2.7 x 10^{-3}. Molecular absorption spectra of IO and SiI were seen in high-temperature spectra of a quartz cell containing and I_2/O_2 mixture.

11015 **K-vacancy production in heavy-ion-atom collisions at small impact parameters.** Anholt, R. (Stanford University, Stanford, CA 94305). *IEEE (Institute of Electrical and Electronics Engineers) Transactions on Nuclear Science;* No. 2, 1074-1077(1982). (CONF-801111—).

From 6. conference on application of accelerators in research and industry; Denton, TX, USA (3 Nov 1980).

The probability P(b) of forming K vacancies in 60-MeV I + Ag collisions with center-of-mass scattering angles θ /SUB cm/ between 20° and 144° was measured. The measured probability varies approximately as $\sin^2\theta$ /SUB cm/ , as predicted for the kinematic peak part of 2pσ-2pπ rotatational coupling. The authors conclude that while the shape of P(b) indicates that 2pσ-2pπ rotational coupling is important in the creation of K vacancies, the probability of creating the initial 2pπ vacancy must be impact parameter dependent. In other collisions where a rise in P(b) has been observed at low impact parameters, it is possible that the rise is due not to a kinematic peak, but to a contribution from lsσ vacancy production.

11016 **Angular distribution of Pb L x-rays excited by 3 MeV protons.** Clark, M.; Hurst, S.; Shafroth, S.M.; Swenson, J.; Varghese, S.L.; Willis, J.E. (Univ. of North Carolina at Chapel Hill and Triangle Universities Nuclear Laboratory, Durham, NC). *IEEE (Institute of Electrical and Electronics Engineers) Transactions on Nuclear Science;* **NS-28**: No. 2, 1117-1118(Apr 1981). (CONF-801111—).

From 6. conference on application of accelerators in research and industry; Denton, TX, USA (3 Nov 1980).

The authors have measured the angular distribution of Pb L1 and Lα x-rays in the case of lead where the targets were typically 100 ug/cm^2 thick with a 400 ug/cm^2 layer of silver evaporated on each side. Spectra were obtained at 25, 45, 65, 90, 115, 135 and 155° and ratios of Pb L x-rays to the isotropic Ag K x-rays were taken. The most readily interpretable case is L1 since this transition involves only the Lm subshell. After correcting for x-ray absorption in the target assuming it to be layered (i.e. neglecting diffusion of the Ag in the Pb) the authors find a small deviation from isotropy, which is expected due to enhanced depopulation of M=0 substates at small impact parameter collisions. The velocity dependence of the alignment parameter A_2 has been calculated using PWBA and screened as well as unscreened wave functions. Results for A_2 agree with these calculations. Further work is under consideration.

11017 **Neutron polarization measurements using the pulsed-polarized proton and deuteron beams at TUNL.** Walter, R.L. (Duke University, Durham, NC 27706). *IEEE (Institute of Electrical and Electronics Engineers) Transactions on Nuclear Science;* **NS-28**: No. 2, 1260-1263(Apr 1981). (CONF-801111—).

From 6. conference on application of accelerators in research and industry; Denton, TX, USA (3 Nov 1980).

Nanosecond wide pulses of polarized protons or deuterons at a repetition rate of 4 MHz are now routinely available for studying interactions involving outgoing neutrons. Up to 90 nA of protons and 200 nA of deuterons have been observed on target. The authors' first experiments involved the determination of the analyzing power A /SUB y/ (UJ) for a few (→p,n) and (→d,n) reactions using conventional neutron time-of-flight detection. A major program for observing polarization effects in neutron elastic scattering has been initiated. The source of polarized neutrons for this program is the ^{2}H(→d,n→)^{3}He reaction which yields a neutron beam having 90% of the polarization of the incident deuterons.

11018 **Energy straggling of helium ions in aluminum.** Oberlin, J.C.; Amokrane, A.; Beaumevieille, H.; Stoquert, J.P. (Center des Sciences et de La Technologie Nucleaires, R.P. 1017, Alger). *IEEE (Institute of Electrical and Electronics Engineers) Transactions on Nuclear Science;* **NS-28**: No. 2, 1225-1226(Apr 1981). (CONF-801111—).

From 6. conference on application of accelerators in research and industry; Denton, TX, USA (3 Nov 1980).

Straggling of $^3He^+$ ions in thin films of Al has been measured in the energy range 1.1 - 2.3 MeV. The energy straggling was obtained by taking the backscattering spectra of incident ions first from a clean Ta backing, then from an identical Ta backing onto which a thin Al film has been evaporated. The straggling values were compared with predictions of various theories. The results calculated by Bohr and Lindhard-Scharff theories are respectively 15% and 30% lower than our experimental measurements, whereas those are in good agreement with the Bethe-Livingston theory.

11019 **Laser spectroscopy of negative ion beams.** Mead, R.D.; Feigerle, C.S.; Lineberger, W.C.; Schulz, P.A. (Univ. of Colorado and Joint Institute for Laboratory Astrophysics, Boulder, Colorado 80309). *IEEE (Institute of Electrical and Electronics Engineers) Transactions on Nuclear Science;* **NS-28**: No. 2, 1194-1197(Apr 1981). (CONF-801111—).

From 6. conference on application of accelerators in research and industry; Denton, TX, USA (3 Nov 1980).

The availability of intense tunable and fixed frequency lasers has made it possible to investigate photon-ion interactions in crossed beam experiments. The short wavelength limitations of current lasers result in the greatest variety of applications having been made to studies of photon interactions with negative ions. Two major experimental approaches have been developed: fixed frequency laser negative ion photoelectron spectroscopy and tunable laser photodetachment/photodissociation spectroscopy. The former approach is best suited for determination of electron affinities and structural properties of ions and free radicals, while the latter method provides highly accurate electron affinities and dynamical information on electron-molecule interactions. It is also possible to determine the internal energy content of negative ions. The experimental techniques and their limitations are discussed in the form of several case studies: OH^-, C_2^- and the transition metals. Finally an attempt is made to ascertain promising avenues for new investigations in this field.

11020 **Efficient neutron production using 12 MeV electrons.** Bowman, C.D. (National Bureau of Standards, Washington, DC 20234). *IEEE (Institute of Electrical and Electronics Engineers) Transactions on Nuclear Science;* **NS-28**: No. 2, 1485-1487(Apr 1981). (CONF-801111—).

From 6. conference on application of accelerators in research and industry; Denton, TX, USA (3 Nov 1980).

A comparison of (γ,n) and atomic cross sections shows that neutron production with an electron beam can be as energy efficient with 12-MeV electrons as with the conventionally used 30- to 100-MeV electrons. Neutron production from tungsten using 100-MeV electrons is compared with a thin tungsten converter followed by a deuterium-containing target using electrons near 12 MeV. For a BeD_2 target a yield of $2x10^{12}$ neutrons per kilojoule of beam power is predicted.

11021 **Final charge states of ions scattered to large angles by single collisions.** Antar, A.A.; Kessel, Q.C. (The University of Connecticut, Storrs, CT 06268). *IEEE (Institute of Electrical and Electronics Engineers) Transactions on Nuclear Science;* **NS-28**: No. 2, 1230-1232(Apr 1981). (CONF-801111—).

From 6. conference on application of accelerators in research and industry; Denton, TX, USA (3 Nov 1980).

Measurements of the charge states of ions following ion or atom excitation, have been used as probes of atomic structure since the early 1900's. More recently, the investigation of the final charge states of heavy ions scattered from heavy atoms has led to the realization that much of the ionization results from the production and subsequent cascade filling of inner-shell vacancies. The development, by Fano and Lichten, of the molecular orbital model for heavy ion-atom collisions has made our present understanding of these collisions possible. Today charge state measurements are made not only because of their intrinsic interest, but because they shed light on the molecular dynamics of collisions over a wide range of collision energies. It is found that collisions from 100 ev to 100 Mev can have features in common, and that an effective way of testing the molecular orbital model over this wide range of energies is to measure charge states as a function of scattering angles for single collisions.

11022 **Vacuum ultraviolet emission following impact of Li^+ and He^+ on He and Ne at 5-30 keV.** Jamison, K.A.; Thomson, G.M. (Ballistic Research Lab., ABRADCOM, Aberdeen Proving Ground, Maryland 21005). *IEEE (Institute of Electrical and Electronics Engineers) Transactions on Nuclear Science;* **NS-28**: No. 2, 1156-1158(Apr 1981). (CONF-801111—).

From 6. conference on application of accelerators in research and industry; Denton, TX, USA (3 Nov 1980).

Collisions between ions and free atoms at energies of a few keV often elevate the participants into vacuum ultraviolet (VUV) radiative states or into other states which lead to VUV emission as part of their deexcitation cascade. The wavelengths of these emissions are characteristic of the emitting species and their VUV production cross sections are often large. In recent years these attributes have kindled an increased interest in the exploitation of collision induced VUV spectroscopy for plasma and material diagnostics. The present report updates a continuing study of collision induced VUV emission now underway at the Ballistic Research Laboratory. The effort is aimed at identifying the mechanisms responsible for the production of such states and at measuring their photon production cross sections as a function of impact energies. Four different collision combinations are currently under study: $Li^+ + He$, $He^+ + He$, $Li^+ + Ne$ and $He^+ + He$. In the first two, the projectiles are isoelectronic and isonuclear to the simple closed shell target respectively. As such they will lend themselves to theoretical analysis. The remaining combinations were chosen as examples in which simple projectiles may initiate multiple ionization and other complex processes in a many-electron target.

11023 **Total cross sections and impact-parameter dependence of X-ray production in ion-atom collisions.** Jones, K.W.; Johnson, B.M. (Brookhaven National Laboratory, Upton, New York 11973). *IEEE (Institute of Electrical and Electronics Engineers) Transactions on Nuclear Science;* **NS-28**: No. 2, 1098-1102(Apr 1981). (CONF-801111—). Contract AC02-76CH00016.

From 6. conference on application of accelerators in research and industry; Denton, TX, USA (3 Nov 1980).

Extensive experimental data on the production of inner-shell vacancies have been acquired during the past few years. A rather complete picture of the production systematics from very light elements at low energies to very heavy elements at energies of several hundred MeV has emerged. A survey of some of these results for the energy and charge-state dependence of the total cross sections and of the impact-parameter dependence P(b) of the inner shell vacancy production process is presented and compared with theoretical predictions. A number of open questions in the field are discussed and a few suggestions for further work are given.

11024 **K-shell ionization by low-velocity ions.** Rice, R.K.; Basbas, G.; Duggan, J.L.; McDaniel, F.D. (North Texas State University, Denton, Texas 76203). *IEEE (Institute of Electrical and Electronics Engineers) Transactions on Nuclear Science;* **NS-28**: No. 2, 1103-1108(Apr 1981). (CONF-801111—).

From 6. conference on application of accelerators in research and industry; Denton, TX, USA (3 Nov 1980).

K-shell x-ray production measurements are reported for protons, deuterons and alpha particles incident on thin foils of copper, niobium, silver and antimony. In the velocity range of the experiments, which correspond to 100-600 keV/u, the energy of ionization was as large as 10% of the bombarding energy. The inferred dependence of the excitation process on the projectile mass, atomic number and energy is compared with theoretical estimates of a low-velocity ionization threshold, the binding effect and the Coulomb-deflection effect. Precision of measurement is not great enough to

discern unambiguously the threshold effect, but the binding and Coulomb-deflection effects are clearly distinguished.

11025 **L-shell ionization cross sections of Ba, Ce, Nd, Sm and Dy for proton energies from 0.5 to 2.0 MeV.** Rayburn, L.A. (The University of Texas at Arlington, Arlington, Texas 76019). *IEEE (Institute of Electrical and Electronics Engineers) Transactions on Nuclear Science;* NS-28: 1109-1111(Apr 1981). (CONF-801111—).

From 6. conference on application of accelerators in research and industry; Denton, TX, USA (3 Nov 1980).

Protons from the University of Texas at Arlington's 2 MV Van de Graaff accelerator were used to produce characteristic L x-rays from thin targets of Ba, Ce, Nd, Sm and Dy. Incident proton energies were varied from 0.5 to 2.0 MeV. The x-rays were detected by an ORTEC High Purity Germanium Low Energy Photon Spectrometer (LEPS) mounted at 90° to the beam direction. The incident proton beam was monitored by a particle detector also mounted at 90° to the beam direction. The measured x-ray production cross sections were converted to ionization cross sections by the use of subshell fluorescence yields and Coster-Kronig transition probabilities taken from Bambynek. Comparison of these ionization cross sections as well as the ratios of selected subshell x-ray yields with the predictions of the Plane Wave Born Approximation (PWBA) and the Binary Encounter Approximation (BEA) show that the PWBA predictions fit the experimental results much better than the BEA predictions.

11026 **Comparison of L x-ray spectra from multi-stripped ions in P^+ + Ar and S^+ + Ar gas collisions at 100 keV.** Peterson, R.S.; Furst, M.; Hayden, H.C.; Smith, W.W. (The University of Connecticut, Storrs, CT 06268). *IEEE (Institute of Electrical and Electronics Engineers) Transactions on Nuclear Science;* NS-28: No. 2, 1114-1116(Apr 1981). (CONF-801111—).

From 6. conference on application of accelerators in research and industry; Denton, TX, USA (3 Nov 1980).

Structure in the soft x-ray spectra from projectiles excited in ion-atom collisions at 100 keV has been observed. Previous spectral measurements on these collision systems using a curved crystal Bragg spectrometer were unable to experimentally resolve the multiplet structure. The present results are obtained with a grazing incidence monochrometer and clearly show the resolved structure from L x-rays of neon-like and flourine-like ions. The L x-ray spectra from phosphorus and sulfur ions after single collisions in argon gas targets are compared to establish x-ray line identifications. The individual spectra yield information on the collision mechanism involving the inner-shell promotion of L-shell electrons and the simultaneous outer-shell electron excitation. The model for L-shell vacancy production in asymmetric ion-atom collisions assumes that two 2p electrons of the lower-Z projectile are promoted via the $4f\sigma$ molecular-orbital. Because this orbital is coupled to many empty molecular orbitals, the probability that one or two 2p electrons are promoted to higher orbitals is unity for ion-atom collisions where the L shells interpenetrate. The promotion leaves one or two 2p vacancies in the lower-Z atom after the collision. This model agrees well with experimental observations of energy loss and total vacancy production cross sections. However, the small L x-ray yields, which result after vacancy production, increase dramatically with the collision energy, indicating the possibility of strong outer-shell excitation mechanisms accompanying the inner-shell electron promotion.

11027 **Projectile charge state dependence of M-shell ionization of Au, Pb, Bi and U by 1.42-MeV/amu fluorine ions.** Mehta, R.; Andrews, M.C.; Chaturvedi, R.P.; Duggan, J.L.; Lapicki, G.; McDaniel, F.D.; Miller, P.D.; Wheeler, R.M. (North Texas State University, Denton, TX 76203). *IEEE (Institute of Electrical and Electronics Engineers) Transactions on Nuclear Science;* NS-28: No. 2, 1122-1125(Apr 1981). (CONF-801111—).

From 6. conference on application of accelerators in research and industry; Denton, TX, USA (3 Nov 1980).

The present study was undertaken to determine the direct ionization and electron capture contributions to vacancy production in the M-shells of $_{79}$Au, $_{82}$Pb, $_{83}$Bi and $_{92}$U for incident $^{19}_{9}$F ions. M-shell x-ray production cross sections have been measured for 1.42-MeV/amu $^{19}_{9}$F /SUP q/ $^{+}$ ions for q=4,5,6,8,9. Enhancements in the target x-ray production cross sections were observed for projectiles with one and two K-shell vacancies over those without K-shell vacancies. Direct ionization and electron capture contributions to the vacancy production were extracted from the data and compared to the plane wave Born approximation and to the Oppenheimer-Brinkman-Kramers calculations of Nikolaev, respectively.

11028 **Cross sections for K- and L-shell excitation in energetic ion-atom collisions.** Schneider, D. (Hahn-Meitner-Institut fur Kernforschung, 1000 Berlin 39, Glienicker Str. 100). *IEEE (Institute of Electrical and Electronics Engineers) Transactions on Nuclear Science;* No. 2, 1126-1130(Apr 1981). (CONF-801111—).

From 6. conference on application of accelerators in research and industry; Denton, TX, USA (3 Nov 1980).

Absolute K- and L-shell vacancy production cross sections have been determined from Auger-electron measurements in various heavy-ion-atom collisions. Collision systems with atomic numbers Z between 5 and 18 and with projectile energies varied between 6 and 600 keV were investigated. From cross section plots for some exemplary collision systems general trends are indicated and discussed in terms of the molecular-orbital (MO) model. Cross section ratios are deduced and compared to theoretical predictions.

11029 **Ionization by low and intermediate energy ion and neutral beams.** Rudd, M.E. (University of Nebraska, Lincoln, Lincoln, NE 68588). *IEEE (Institute of Electrical and Electronics Engineers) Transactions on Nuclear Science;* NS-28: No. 2, 1135-1138(Apr 1981). (CONF-801111—).

From 6. conference on application of accelerators in research and industry; Denton, TX, USA (3 Nov 1980).

One of the most important basic processes that take place in collisions of atomic systems is ionization resulting in the emission of electrons. A complete understanding of this process is complicated by the fact that electron emission can take place via a number of mechanisms, some of which are related. Simple measurements of the cross section for electron ejection as a function of projectile velocity does not usually provide enough information to unravel the various mechanisms. But cross sections which are differential in the angle and energy of the ejected electrons, which are now available for protons on a variety of target gases, can be used to elucidate these mechanisms. While most of the experiments of this type have been done at high energies (above, say, 100 keV) there is now data available at energies as low as 5 keV for protons on various gases and to 15 keV for neutral hydrogen atoms on helium gas. At these low energies the angular distributions tend to become less anisotropic than at higher energies and do not yield as much information, but from the energy distributions integrated over angle the authors have been able to construct a mechanism which describes the results quite well. Also they have found a simple empirical equation for the cross sections differential in ejected electron energy which is of great potential usefulness to workers in various applied areas in which secondary electrons from collisions are involved.

11030 **Convoy electrons from solids in coincidence with the final projectile charge state.** Loubert, R.; Breining, M.; Elston, S.; Huldt, S.; Liljeby, L.; Sellin, I.A.; Thoe, R.S. (East Carolina University, Greenville, North Carolina 27834). *IEEE (Institute of Electrical and Electronics Engineers) Transactions on Nuclear Science;* No. 2, 1143-1145(Apr 1981). (CONF-801111—).

From 6. conference on application of accelerators in research and industry; Denton, TX, USA (3 Nov 1980).

The authors measure the yield and final velocity distribution of electrons accompanying the projectile exiting from thin solid targets in coincidence with the projectile charge state. They find that the yield per emergent projectile and the longitudinal velocity distribution is independent of the final projectile charge state.

11031 **On charge transfer in ion-atom collisions at intermediate collision velocities.** Fritsch, W.; Lin, C.D.; Tunnell, L.N. (Kansas State University, Manhattan, KS 66506). *IEEE (Institute of Electrical and Electronics Engineers) Transactions on Nuclear Science;* NS-28: No. 2, 1146-1148(Apr 1981). (CONF-801111—).

From 6. conference on application of accelerators in research and industry; Denton, TX, USA (3 Nov 1980).

The authors study charge transfer at intermediate energies for multielectron ion-atom collisions within the coupled-state impact-parameter method. They point out the importance of assumptions about electronic relaxation by comparing various calculations of cross sections for KK charge transfer in F^{9+} + Si as a test case. In these calculations, either the unrelaxed Hamiltonian of the atomic model or a relaxed molecular Hamiltonian has been employed, and two-state atomic or molecular basis sets have been used. To correct for the inadequacy of atomic orbitals for close collisions at intermediate energies, the authors propose to add orbitals of the united atom at the two collision centers. With such an atomic basis set, quasimolecular behavior of the system is represented sufficiently well. The authors report on results for the collision system H^+ + He^+ for which calculations with large molecular and atomic basis sets exist.

11032 **Charge transfer of 0.8 MeV/u H^+, He^+ in various hydrocarbon gases.** Bissinger, G.; Joyce, J.M.; Laubert, R.; Varghese, S.L. (East Carolina University, Greenville, NC 27834). *IEEE (Institute of Electrical and Electronics Engineers) Transactions on Nuclear Science;* **NS-28**: No. 2, 1149-1151(Apr 1981). (CONF-801111—).

From 6. conference on application of accelerators in research and industry; Denton, TX, USA (3 Nov 1980).

Systematic variations in total single electron capture cross sections, σ_{10} (C /SUB m/ H /SUB n/), for 0.8 MeV/u H^+ and He^+ on various hydrocarbon gases are interpreted in terms of a model that incorporates intramolecular post-collision-interactions to estimate the reduction in the number of existing neutral projectiles.

11033 **K-shell ionization cross section for Ti, Fe, Cu, Zr, and Ag.** Benka, O.; Geretschlager, M. (Johannes-Kepler-Universitat Linz, A-4040 Linz/ Auhof). *IEEE (Institute of Electrical and Electronics Engineers) Transactions on Nuclear Science;* **NS-28**: No. 2, 1095-1097(Apr 1981). (CONF-801111—).

From 6. conference on application of accelerators in research and industry; Denton, TX, USA (3 Nov 1980).

Absolute K-shell ionisation cross sections have been measured for thin targets of Ti, Fe, Cu, Zr and Ag for protons in the energy range 85-790 keV and for thin targets of Ti, Fe and Cu for He ions in the energy range 190-750 keV. In addition the relative variation of the cross sections with energy has been determined with high accuracy. The experimental values are compared to the perturbed stationary state approximation (CPSSR) and the semiclassical approximation (SCA). The CPSSR theory provides the best overall agreement with experimental cross sections. For higher scaled energies the CPSSR theory predicts the energy dependence of the cross sections very well but in the lower energy range it overpredicts the cross sections by as much as a factor of two and this overprediction seems to increase with Z_a at a fixed scaled energy y. The SCA theory predicts slightly too large ionisation cross sections except for the lowest £ values. The relative variation of the cross sections with energy is not well described in either energy range.

11034 **Electron capture from inner shells by fully stripped ions.** Lapicki, G. (Northern State University, Natchitoches, LA 71457). *IEEE (Institute of Electrical and Electronics Engineers) Transactions on Nuclear Science;* **NS-28**: No. 2, 1066-1068(Apr 1981). (CONF-801111—).

From 6. conference on application of accelerators in research and industry; Denton, TX, USA (3 Nov 1980).

Theories for electron capture from inner shells by fully stripped ions are compared with experiments for K-shell vacancy production. The recently developed theory goes beyond the Oppenheimer-Brinkman-Kramers (OBK) approximation since it accounts for the perturbed stationary-state (PSS) and relativistic (R) effects in the description of inner shells as well as for the Coulomb (C)-deflection of the projectile ions; at high velocities of these ions, the theory merges with the second Born approximation. Agreement with a vast amount of data is obtained without introduction of semiempirical scaling factors. The scheme of calculations, which are cast in terms of the OBK cross sections of Nikolaev only for convenience, is presented through a sample evaluation of electron capture cross sections.

11035 **Dielectronic and radiative recombination of highly stripped sulfur ions incident on argon.** Tanis, J.A.; Clark, M.; Mowat, J.R.; Shafroth, S.M.; Strait, E.N.; Swenson, J.; Willis, J.E. (University of California, Berkeley, CA 94720). *IEEE (Institute of Electrical and Electronics Engineers) Transactions on Nuclear Science;* **NS-28**: No. 2, 1063-1065(Apr 1981). (CONF-801111—).

From 6. conference on application of accelerators in research and industry; Denton, TX, USA (3 Nov 1980).

The authors have measured sulfur K x-ray emission following electron capture for 70 MeV S /SUP q+/ (q=13-16) ions incident on Ar. K radiation resulting from capture was isolated by detecting coincidences between S K x rays and electron capture events. Two recombination processes which result in the emission of a K x ray were identified: dielectronic recombination, which is the inverse Auger effect, and radiative recombination, which results from capture into a high n state ($n \geq 2$). The cross section for K radiation following capture increases by more than three orders of magnitude for q = 13+ to 16+. The fraction of capture events which result in K radiation increases from 0.0004 for q = 13+ to 0.3 for q = 16+, indicating that radiative recombination becomes relatively more important for high charge states, i.e. as $q \rightarrow Z$. Possible applications to radiative loss processes in a plasma are discussed.

11036 **Electron capture by protons and deuterons.** Jones, C.; Doughty, B.M. (East Texas State University, Commerce, Texas). *IEEE (Institute of Electrical and Electronics Engineers) Transactions on Nuclear Science;* **NS-28**: No. 2, 1069-1071(Apr 1981). (CONF-801111—).

From 6. conference on application of accelerators in research and industry; Denton, TX, USA (3 Nov 1980).

Cross section measurements are reported for electron capture into the 3s state by 20-150 keV protons and deuterons incident on molecular hydrogen and deuterium. Conventional wisdom indicates that these cross sections should be nearly identical at equivalent velocities and researchers routinely use deuteron projectiles to extend proton excitation curves downward in velocity. This practice has been questioned on theoretical grounds and some investigators have reported consistent differences in cross sections for the two isotopes, however, nearly always within the experimental uncertainty of the measurements. The authors have made a systematic study of the 3s electron capture cross sections described above to check for isotopic effects. These cross sections are then compared to previous measurements reported in the literature.

11037 **L-shell ionization in proton and alpha particle collisions with argon.** Ford, A.L.; Martin, M.; Reading, J.F. (Texas A & M University, College Station, Texas 77843). *IEEE (Institute of Electrical and Electronics Engineers) Transactions on Nuclear Science;* **NS-28**: No. 2, 1078-1080(Apr 1981). (CONF-801111—).

From 6. conference on application of accelerators in research and industry; Denton, TX, USA (3 Nov 1980).

The authors report results of coupled-state calculations of argon L-shell ionization by proton and alpha particle collisions in the 100 to 500 kev/amu energy range. Their target-centered basis includes up through f-states. They have explored the angular momentum convergence and ability of our pseudostates to describe the ionization continuum by comparing to the Born calculations of Choi; excellent agreement is obtained. In the Born the authors have shown the effect of using different independent-particle target potentials; these effects are large, particularly at low energy. They propose a modification of the Hartree-Fock potential that leaves all the wavefunctions and the bound orbital energies unaltered, but that lowers the continuum by an amount that brings the L-shell ionization potentials roughly into agreement with experiment. Their coupled-states calculations show deviations from the 1st Born approximation, and are in fair agreement with experiment. A complete comparison to experiment will require the calculation of the charge transfer channel contribution to the vacancy production.

11038 Relative population of the levels of the 1s2s2p and 1s2p² configurations of argon from three electron excited atoms. Tunnell, T.W.; Bhalla, C.P. (Kansas State University, Manhattan, Kansas 66506). *IEEE (Institute of Electrical and Electronics Engineers) Transactions on Nuclear Science;* **NS-28**: No. 2, 1081-1083(Apr 1981). (CONF-801111—).

From 6. conference on application of accelerators in research and industry; Denton, TX, USA (3 Nov 1980).

The possible contributions of the cascading from higher excited states to the states which can deexcite by the x-ray and Auger processes are investigated for Li-like argon. A model is developed to calculate the probability that a given excited state will eventually populate a particular lower excited state. The model requires the calculation of the transition rates of the cascading levels. Numerical results are presented for the cascade feeding of the levels of the 1s2s2p and 1s2p² configurations. The cascading levels considered belong to the 1s2snl and 1s2pnl configurations with nl = 3s,3p,...4f.

11039 Calculation of double differential cross section for fast ion and electron impact ionization of atoms. Mason, S.T. (Georgia State University, Atlanta, Georgia 30303). *IEEE (Institute of Electrical and Electronics Engineers) Transactions on Nuclear Science;* **NS-28**: No. 2, 1084-1088(Apr 1981). (CONF-801111—).

From 6. conference on application of accelerators in research and industry; Denton, TX, USA (3 Nov 1980).

The theory of the energy and angular distribution of electrons ejected in electron-atom and ion-atom collisions, within the framework of Born approximation, is discussed. Particular attention is paid to the case where the incident ion carries along its own electrons. Examples are given for e, H^+, and He^+ collisions with He. It is shown that for fast collisions, excellent agreement with experiment is obtained for electron impact and fairly good agreement for proton and He^+ impact when both projectile and target ionization are taken into account.

11040 Interpretation of high-Q scattering experiments. Olson, R.E. (SRI International, Menlo Park, CA 94025). *IEEE (Institute of Electrical and Electronics Engineers) Transactions on Nuclear Science;* **NS-28**: No. 2, 1029-1031(Apr 1981). (CONF-801111—).

From 6. conference on application of accelerators in research and industry; Denton, TX, USA (3 Nov 1980).

A theoretical model has been developed for the calculation of the states of ionization of target atoms after impact by an energetic high charge state ion. The calculational method is based upon using the three-body classical-trajectory Monte Carlo approach combined with the independent electron model to determine the target ionization cross sections. Calculated cross sections for rare gas targets are in qualitative agreement with experimental values for incident ion charge states of q = +4 to +54 and energies in the 1 to 5 MeV/amu range. The calculations indicate that the "gross" ionization cross sections measured using the "condenser-plate" approach can be scaled to one reduced curve for each target species by plotting cross section divided by incident ion charge state versus energy per nucleon divided by incident ion charge state.

11041 Radiative electron capture for F^{8+} and F^{9+} ions in collisions with a He gas target. Kawatsura, K.; Richard, P.; Tawara, H. (Kansas State University, Manhattan, KS 66506). *IEEE (Institute of Electrical and Electronics Engineers) Transactions on Nuclear Science;* **NS-28**: No. 2, 1053-1055(Apr 1981). (CONF-801111—).

From 6. conference on application of accelerators in research and industry; Denton, TX, USA (3 Nov 1980).

The x rays from the radiative electron capture (REC) to the projectile K-shell were investigated for F^{8+} and F^{9+} ions incident on the He target atoms in the projectile energy range from 15 to 40 MeV. The peak energies of the K-REC x-ray spectra were found to decrease linearly with a decrease of the projectile energies as expected and extrapolated to the correct ls binding energies at zero velocity. According to theory the distribution width of the REC energies should be independent of the binding energy of electrons in the projectile ions. However, it is found that this width for F^{8+} ions is systematically smaller by 20% than that for F^{9+} ions. The measured REC cross sections for F^{9+} ions are slightly larger than twice those for F^{8+} ions and the total REC cross sections for F^{8+} and F^{9+} ions were found to be more than three orders of magnitude smaller than the total electron capture cross sections and the capture cross sections into excited states.

11042 Reduction of the electron capture cross-section for protons in hydrocarbon gases. Varghese, S.L.; Bissinger, G.; Joyce, J.; Laubert, R. (East Carolina University, Greenville, NC 27834). *IEEE (Institute of Electrical and Electronics Engineers) Transactions on Nuclear Science;* **NS-28**: No. 2, 1056-1058(Apr 1981). (CONF-801111—).

From 6. conference on application of accelerators in research and industry; Denton, TX, USA (3 Nov 1980).

The total electron capture cross section of 0.8 3.0 MeV protons in various hydrocarbon gases (C_1H /SUB n/ C_nH /SUB n/ , n = 2 - 8) has been measured. The authors find that the electron capture cross section per carbon atom decreases as the number of carbon atoms per molecule is increased. This reduction amounts to about 7% for 3 MeV protons and is about 25% for 0.8 MeV protons. The authors find no significant change in the electron capture cross section for carbon as the number of hydrogen atoms per molecule is increased. The observed variations in the cross section can be reproduced by assuming that post-collision-interactions destroy the required velocity match between projectile and electron.

11043 Cross section for radiative electron capture (REC) by 20-80 MeV Cl ions incident on C and Cu foils. Tanis, J.A.; Mowat, J.R.; Shafroth, S.M.; Willis, J.E. (University of California, Berkeley, California 94720). *IEEE (Institute of Electrical and Electronics Engineers) Transactions on Nuclear Science;* **NS-28**: No. 2, 1059-1062(Apr 1981). (CONF-801111—). Contract W-7405-ENG-48.

From 6. conference on application of accelerators in research and industry; Denton, TX, USA (3 Nov 1980).

Radiative electron capture (REC) cross sections for 40-80 MeV Cl ions incident on thin C foils are reported and compared with previous results using Cu targets. The authors find that the measured REC cross section per K vacancy scales according to the number of "free" electrons on the target atom, i.e., those bound target electrons with a velocity much less than the incident projectile velocity. Comparison is made with the free-electron theory of Bethe and Salpeter and good agreement is obtained. Experimental and theoretical results are compared with those of Lindskog et al., and consideration is given to different ways of computing the K-shell binding energy of the projectile at the time of REC which enters into the calculation of the theoretical REC cross section in an important way.

11044 Laser spectroscopic studies of molecular ions using fast ion beam photofragment spectroscopy. Moseley, J.T. (University of Oregon, Eugene, Oregon 97403). *IEEE (Institute of Electrical and Electronics Engineers) Transactions on Nuclear Science;* **NS-28**: No. 2, 1190-1193(Apr 1981). (CONF-801111—).

From 6. conference on application of accelerators in research and industry; Denton, TX, USA (3 Nov 1980).

Spectroscopic information on molecular ions is generally much more difficult to obtain than similar information on neutral molecules, due primarily to the relatively low densities of ions that can be obtained. Ion densities in typical experiments are in the range from 10^4 to 10^8 particles/cm³; densities exceeding 10^9/cm³ can be obtained only with great difficulty. Thus experiments which depend on directly detecting the absorption of radiation by molecular ions are, practically speaking, not feasible, and those which directly detect emission from molecular ions are generally difficult. The ion density problem is further complicated by the usual spread of the ion beam population over a large number of rotational, vibrational and metastable electronic states. For basically these reasons, spectroscopic knowledge of molecular ions has lagged far behind such knowledge of neutral molecules. The particular case of photodissociation is especially favorable for ion studies, since photofragment ions produced by the interaction of a laser with an ion beam can be detected with nearly unit efficiency. Advantage was taken of this fact in the pioneering studies of von Busch and Dunn, who crossed a beam of H_3^+ ions with photons from a powerful arc lamp, and measured the total cross section for photoproduction of H^+

ions, with a resolution of 200. Unfortunately, arc lamps are not powerful enough for general use in studies of ions in fast beams. However, they have proven to be very useful in ion studies using ion cyclotron resonance techniques.

11045 **(INIS-mf—8639) Discharges in the inlet region of a noble gas MHD generator.** Borghi, C.A. (Technische Hogeschool Eindhoven (Netherlands)). 1 Jun 1982. 126p. NTIS (US Sales Only), PC A07/MF A01. Order Number DE83704732.

In this work the onset of the development of the non-equilibrium conductivity in the entrance region of a noble gas MHD generator is investigated both theoretically and experimentally. At low electron densities the discharge seems to be affected by a non-Maxwellian electron distribution. In Chapter II a self-consistent model of a stationary discharge in an Ar-Cs mixture at atmospheric pressure, is set up. It includes the possibility of deviations from a Maxwellian electron energy distribution. The model allows calculation of the discharge parameter at which deviation from the Maxwellian electron distribution will become important. In Chapter III the relaxation of the plasma to a new equilibrium situation following a sudden change in the electron thermal energy is calculated by a model which can take radiation and a non-Maxwellian distribution into account. In Chapter IV an Ar-Cs discharge experiment is described with plasma parameters similar to those present in the entrance region of the generator. The ionization relaxation process in a noble gas MHD generator is experimentally studied and described in Chapter V. In this chapter the relaxation ionization region with and without pre-ionization is investigated. Current voltage characteristics are obtained by varying the applied voltage or the external load. The results are confronted with the theoretical results of the non-Maxwellian model developed in Chapter II.

11046 **(LA-UR—83-2113) Pattern formation by shock processes.** Shaner, J.W. (Los Alamos National Lab., NM (USA)). 1983. Contract W-7405-ENG-36. 22p. (CONF-8305110—6). NTIS, PC A02/MF A01. Order Number DE83015249.

From Fronts, interfaces and patterns conference; Los Alamos, NM, USA (2 May 1983).

Shock waves in condensed media often produce and leave behind periodic patterns and textures. These patterns have been observed both in real time and in postmortem examination. In many cases the patterns can be related to analogous Pattern-forming mechanisms in classical fluid dynamics, such as the Rayleigh-Taylor and Helmholtz instabilities. In other cases, the textures arise from peculiarities in the dynamic stress state immediately behind the leading edge of the shock wave. Periodic waves in the interface between two shock welded metals have a close resemblance to the classical Helmholtz instability. From a practical point of view, these waves are crucial to the formation of a good bond. Impulsive acceleration of an interface can result in the Meshkov instability, which forms patterns qualitatively similar to the Rayleigh-Taylor instability driven by continuous acceleration. However, the patterned stress state left behind after a shock crosses a perturbed interface can result in perturbation growth for shock propagation in either direction across the interface. Even in homogeneous media, the non-hydrostatic component of the stress behind a shock can drive a pattern forming instability. Adiabatic shear banding has been proposed as a mechanism to explain both the patterns observed in shock-compressed and recovered metal samples and the apparent loss of macroscopic shear strength of shocked ceramics. New optical photographs of shocked quartz support this mechanism. 27 references.

11047 **(LA-UR—83-3523) Stability of planar multifluid plasma equilibria by Arnold's method.** Holm, D.D. (Los Alamos National Lab., NM (USA)). 1983. Contract W-7405-ENG-36. 27p. (CONF-8307112—1). NTIS, PC A03/MF A01. Order Number DE84004332.

From American Mathematical Society research conference on fluids and plasmas: geometry and dynamics; Boulder, CO, USA (17 Jul 1983).

A method developed by Arnold to prove nonlinear stability of certain steady states for ideal incompressible flow in two dimensions is extended to the case of barotropic, compressible, multifluid plasmas. This extension is accomplished by constructing conserved functionals derived from degeneracy of Poisson brackets. The results are applied to planar shear flows of the plasma.

11048 **(UCID—19960) High frequency acoustic instabilities in heated fluids.** Chin, R.C.Y.; Garrison, J.C.; Levermore, C.D.; Wong, J. (Lawrence Livermore National Lab., CA (USA)). 19 Dec 1983. Contract W-7405-ENG-48. 37p. NTIS, PC A03/MF A01. Order Number DE84005114.

The hydrodynamic equations describing the evolution of a fluid which is homogeneously heated, either by irradiation or by internal reactions, have a solution with constant density, zero velocity and time-dependent temperature. Conditions governing the stability of this solution with respect to high-frequency acoustic perturbations are obtained. The frequency ω of the perturbation satisfies $\omega t/sub\ w/ >> 1$, where t/sub w/ is a characteristic heating time. Stability estimates are made for the early heating stage where cooling mechanisms can be neglected, and for the steady-state phase where heating and cooling mechanisms exactly balance. The estimates are made in two ways: (1) a linearized calculation, employing two-time perturbation theory, which includes the dissipative effect of heat conductivity; and (2) a calculation which neglects conductivity but includes the leading nonlinear wave interactions. The true instability growth rate is bounded by the smaller of these estimates. For a simple model of the heating mechanism during the early heating, bounds on the growth rates are obtained which show that this solution is at worst only weakly unstable. A similar treatment of the steady-state phase shown that this solution is susceptible to exponentially growing instabilities. Values of the growth rate are given for the model employed.

11049 **Inertia effects on the dynamics of a disk levitated by incompressible laminar fluid flow.** Warinner, D.K.; Pearson, J.T. (Argonne National Laboratory, Argonne, IL 60439). *Journal of Engineering for Power;* **105**: No. 3, 643-653(Jul 1983).

This paper develops a nonlinear ordinary differential equation (O.D.E.) of motion for a disk parallel to a flat plate and levitated by incompressible laminar flow of fluid supplied from a central orifice. The fluid's inertia, reflected in high mass flow rates, is accounted for. The transient flow velocity and pressure field are found by iterative integration of the Navier-Stokes equation to determine the O.D.E. for the time-dependent height of the disk (or fluid film thickness). The film thickness is found by not only numerically integrating the O.D.E., but also by linearizing the equation to obtain a closed-form solution. The results of this combined squeeze film, source-flow case compare favorably with experimental data presented which span cases from negligible inertia (viscous dominance) to cases of inertia dominance. Fortunately, the closed-form solution differs only slightly from the numerical solution; this provides relatively accurate expressions for the frequencies and damping coefficients in terms of the geometry, load (or weight of disk), mass flow rate, and the fluid properties.

The High Resolution Spectrometer (HRS) has been collecting data at PEP since the end of 1981 and has now accumulated 120 pb^{-1} of integrated luminosity. The results of analyses are presented in the following areas: (1) QED and electroweak tests, (2) scalar electron search, (3) inclusive hadron production, (4) D^0, D^+ and D^* production, and studies of quark fragmentation. Only the 20 pb^{-1} of integrated luminosity obtained during our first year of running has been completely analyzed and this provides the data sample for most of the above topics. For others a preliminary analysis of a total sample of 80 pb^{-1} is reported. 20 references.

11052 (CONF-8311112—1) β-decay asymmetry of the free neutron. Bopp, P.; Dubbers, D.; Klemt, E.; Last, J.; Schuetze, H.; Weibler, W.; Freedman, S.J.; Schaerpf, O. (Argonne National Lab., IL (USA); Heidelberg Univ. (Germany, F.R.). Physikalisches Inst.; Institut Max von Laue - Paul Langevin, 38 - Grenoble (France)). 1983. Contract W-31-109-ENG-38. 7p. NTIS, PC A02/MF A01. Order Number DE84004035.

From Workshop on reactor based fundamental physics; Grenoble, France (7 Nov 1983).

The β-decay of polarized neutrons has been studied with the new superconducting spectrometer PERKEO at the ILL. The energy dependence of the β-decay asymmetry has been measured for the first time. From the measured β-asymmetry parameter we obtain a new value for the ratio of weak coupling constants g/sub A//g/sub V/. 11 references.

From LAMPF users group report meeting; Argonne, IL, USA (6 Nov 1983).

Portions are illegible in microfiche products.

The angular dependence of the tensor polarization t_{20}/sup lab/ of recoiling deuterons in π-d elastic scattering was measured as a function of incident pion energy in the range 134 to 256 MeV. No evidence was found for rapid energy or angular dependences in t_{20}/sup lab/. The results agree most favorably with theoretical calculations in which the P_{11} π-N amplitude has been removed altogether. This agreement is consistent with a small effect of pion absorption on the elastic channel. 14 references.

11054 (EFI—522(9)-82) Geometric reconstruction of events in the experiment on the investigation of the recoil proton polarization in the π^0-meson photoproduction. Skhtoryan, E.M. (Erevanskij Fizicheskij Inst. (USSR)). 1982. 15p. (In Russian). NTIS (US Sales Only), PC A02/MF A01. Order Number DE83704597.

A set of programs for processing the data on the investigation of the recoil proton polarization in the reactions of π^0-meson photoproduction by polarized photons is described. The basic problems of identifying and selecting the cases of scattering and storage of this information for the further processing on large computers in order to determine the degree of polarization of recoil protons are considered.

11055 (IC—82/215) Physics with 100-1000 TeV accelerators. Salam, A. (International Centre for Theoretical Physics, Trieste (Italy)). Oct 1982. 21p. (CONF-820980—6). NTIS (US Sales Only), PC A02/MF A01. Order Number DE83704489.

From European Committee of future accelerators - the challenge of ultra-high energies conference; Oxford, UK (27 Sep 1982).

Some thoughts are presented about high energy physics topics which may be connected with future accelerator physics. Discussed are the physics associated with Higgs in grand unifying theories and the physics associated with supersymmetry and with ideas about preons.

11056 (LAL—83-09) High transverse momentum π^0 and direct photon photoproduction. Auge, E. (Paris-11 Univ., 91 - Orsay (France). Lab. de l'Accelerateur Lineaire; Paris-11 Univ., 91 - Orsay (France)). May 1983. 182p. (In French). NTIS (US Sales Only), PC A09/MF A01. Order Number DE84750294.

A measurement of the high transverse momentum π^0 photoproduction cross section, obtained from the NA14 experiment data is presented. The VDM model alone cannot explain the results, which are found to be compatible with first order QCD predictions. A clear direct photon signal is seen. This signal cannot be entirely explained by the QED Compton effect. It allows to reject the integer charge quarks hypothesis within the naive parton model frame. A reconstruction method for energetic π^0 in lead-glass, based on the electromagnetic shower description using a simple model is described.

11057 (LBL—16736) Search for right-handed currents in muon decay. Stoker, D.P. (Lawrence Berkeley Lab., CA (USA)). Sep 1983. Contract AC03-76SF00098. 35p. (CONF-8307109—3). NTIS, PC A03/MF A01. Order Number DE84002901.

From 11. SLAC summer institute conference on particle physics - dynamics and spectroscopy at high energy; Stanford, CA, USA (18 Jul 1983).

Limits are reported on right-handed currents, based on precise measurement of the e^+ spetrum end point in μ^+ decay. Highly polarized muons from the TRIUMF surface beam were stopped in metal foils within a 1.1 T spin-holding longitudinal field or a 70 G spin-precessing field. For the spin-held data, the V-A rate vanishes in the beam direction at the end point. Measurement of this sets the 90% confidence limits xi P/sub mu/δ/rho $>$ 0.9959 and M(W/sub R/) $>$ 380 GeV, where W/sub R/ is the possible right-handed gauge boson. The μ SR signal amplitude of the spin-precessed data independently sets the limits xi P/sub μ/δ/rho $>$ 0.9918 and M(W/sub R/) $>$ 320 GeV. Limits on non-(V-A) currents, familons, and composite leptons are also presented. 27 references.

Portions are illegible in microfiche products. Original copy available until stock is exhausted; Thesis.

This thesis describes the most precise measurement to date of the ratio R, the hadronic cross section in lowest order electron-positron annihilation to the cross section for muon pair production in lowest order electron-positron annihilation. This experiment is of interest because R is a fundamental parameter that tests in a model independent way the basic assumptions of strong interaction theories. According to the assumptions of one of these theories the value of R is determined simply from the electric charges, spin, and color assignments of the produced quark-pairs. The experiment was carried out with the MAgnetic Calorimeter using collisions of 14.5 GeV electrons and positrons at the 2200m circumference PEP storage ring at SLAC. The MAC detector is one of the best-suited collider detectors for measuring R due to its nearly complete coverage of the full angular range. The data for this experiment were accumulated between February 1982 and April 1983 corresponding to a total event sample of about 40,000 hadronic events. About 5% of the data were taken with 14 GeV beams and the rest of the data were taken with 14.5 GeV beams. A description of particle interactions and experimental considerations is given.

11059 (SLAC-PUB—3245) Latest results from the MARK II at PEP. Lockyer, N. (Stanford Linear Accelerator Center, CA (USA)). Oct 1983. Contract AC03-76SF00515. 25p. (CONF-8307109—1). NTIS, PC A02/MF A01. Order Number DE84003858.

From 11. SLAC summer institute conference on particle physics - dynamics and spectroscopy at high energy; Stanford, CA, USA (18 Jul 1983).

We present single photon annihilation results from the MARK II detector at PEP based on ~ 100 pb^{-1} of integrated luminosity taken at a center of mass energy $\sqrt{s}$ = 29 GeV. A study of inclusive leptons for momenta ≧ 2 GeV/c yield the average semileptonic branching ratios of bottom (b) and charm (c) quarks and information about the b fragmentation function. A measurement of the bottom hadron lifetime is presented based on a study of the prompt lepton impact parameters. In addition we report on a precise measurement of the tau lifetime and an updated D^0 lifetime. We also present a search for supersymmetric electrons, weak neutral current couplings from leptons and bottom particles and evidence for K*'s at PEP. 43 references.

11060 (SLAC-PUB—3247) Charm and beauty lifetime measurements with the MARK II vertex detector. Jaros, J.A. (Stanford Linear Accelerator Center, CA (USA)). Oct 1983. Contract AC03-76SF00515. 6p. (CONF-8308145—1). NTIS, PC A02/MF A01. Order Number DE84003862.

From Workshop on search for heavy flavors; Como, Italy (29 Aug 1983).

We have measured the lifetime of the D^0 meson and the average lifetime of b-flavored hadrons with the MARK II vertex detector at PEP. We find tau/sub D°/ = (4.0 +- 1.4/1.1 +- 1.0) x 10^{-13} sec and tau/sub b/ = (12.0 +- 4.5/3.6 +- 3.0 x 10^{-13} sec. 11 references.

11061 (SLAC-PUB—3262) Mark III results from SPEAR. Toki, W. (Stanford Linear Accelerator Center, CA (USA)). Nov 1983. Contract AC03-81ER40050. 25p. (CONF-8307109—4). NTIS, PC A02/MF A01. Order Number DE84005326.

From 11. SLAC summer institute conference on particle physics - dynamics and spectroscopy at high energy; Stanford, CA, USA (18 Jul 1983).

First results from the MARK III detector at SPEAR are presented based on 2.7 million J/psi decays. The eta/sub c/ is observed in three modes, J/psi → γeta/sub c/, (eta/sub c/ → rho anti rho, eta$\pi^+\pi^-$, and phi phi). Using the phi phi mode, the eta/sub c/ spin-parity is determined to be 0^-. The known radiative J/psi decays J/psi → γf(f → $\pi^+\pi^-$), γeta'(eta' → γrho°, eta$\pi^+\pi^-$), γf'(f' → kappa⁺kappa⁻), γtheta(theta → kappa anti kappa), and γiota(iota → πkappa anti kappa) are observed and their branching ratios found to be in agreement with previous measurements. In the J/psi → γkappa⁺kappa⁻ mode a new state is observed at 2.22 GeV and in the J/psi → γγrho° and γeta$\pi^+\pi^-$ modes evidence for new structures near 1.4 GeV is presented. 29 references.

11062 Weak neutral currents in e^+e^- collisions at $\sqrt{s}$ = 29 GeV. Levi, M.E.; Blocker, C.A.; Strait, J.; Abrams, G.S.; Amidei, D.; Baden, A.R.; Boyarski, A.M.; Breidenbach, M.; Burchat, P.; Burke, D.L. 11065 (BNL—33928) Montecarlo studies of t quarks. Protopopescu, S.D. (Brookhaven National Lab., Upton, NY (USA)). 1983. Contract AC02-76CH00016. 4p. (CONF-8308131—4). NTIS, PC A02/MF A01. Order Number DE84004180.

From 3. international conference on physics in collision; Como, Italy (31 Aug 1983).

Portions are illegible in microfiche products.

In this report I describe some of the results of a Montecarlo study with the Program ISAJET done in collaboration with S. Aronson, F. Paige and D. Weygand at BNL. Top quarks can be produced by QCD processes such as q anti q → t anti t or gg → t anti t or from the decay W/sup +-/ → t anti b (anti tb); the cross section depends on the t mass and the center of mass energy. At $\sqrt{s}$ = 540 GeV W decays produce more t quarks if 40 GeV < m/sub t/ < 60 GeV than QCD processes because the W branching ratio does not decrease rapidly with the t mass. The branching ratio is given by B = γ/(3 + γ) where γ = (1 - m/sub t//m/sub W/)²)² (1 + 1/2 (m/sub t//m/sub W/)²)² from which one obtains B = 21% for m/sub t/ = 30 GeV and B = 8.7% for m/sub t/ = 60 GeV. In Figure 1 we show the expected cross section as a function of m/sub t/ at $\sqrt{s}$ = 540 GeV and at $\sqrt{s}$ = 2 TeV. The W decay process is clearly dominant at $\sqrt{s}$ = 540 GeV and also at $\sqrt{s}$ = 2 TeV over a more limited mass range. To detect the top quarks the obvious signal to use is high transverse momentum leptons from semi-leptonic decays, B (t → be nu) = B (t → bμ nu) = 1/9. Note, however, that this relatively large branching ratio becomes negligible if there exists a charged Higgs lighter in mass than the t quark. To study the characteristics of the top quark jets we generated 10^4 events anti p p → W + X, W → t anti b, for m/sub t/ = 30 GeV and m/sub t/ = 60 GeV. We then let t → bl nu and the b quark jets are fragmented using Field-Feynman fragmentation including leading-log QCD gluon emission; in this process the b jet mass can be significantly higher than m/sub b/.

11066 (BNL—33952) Jets in hadronic reactions. Paige, F.E. (Brookhaven National Lab., Upton, NY (USA)). 1983. Contract AC02-76CH00016. 42p. (CONF-8309196—1). NTIS, PC A03/MF A01. Order Number DE84004293.

From Meeting of the Division of Particles and Fields; Blacksburg, VA, USA (15 Sep 1983).

Recent experimental data on the properties of jets in hadronic reactions are reviewed and compared with theoretical ex-

pectations. Jets are clearly established as the dominant process for high E/sub T/ events in hadronic reactions. The cross section and the other properties of these events are in qualitative and even semiquantitative agreement with expectations based on perturbative QCD. However, we can not yet make precise tests of QCD, primarily because there are substantial uncertainties in the theoretical calculations. 45 references. (WHK)

From International symposium on lepton and photon interactions at high energies; Ithaca, NY, USA (4 Sep 1983).

An overview of the 18 independent parameters of the standard SU(3)/sub c/ x SU(2)/sub L/ x U(1) model is given. Neutral current phenomenology and sin² theta/sub W/, W/sup +-/ and Z⁰ masses, and testing the great desert hypothesis are discussed. The need for precise measurements in elementary particle physics is emphasized. (WHK)

11068 **(CEA-CONF—6684) Q.C.D. estimates of hadronic cross sections.** Navelet, H.; Peschanski, R. (CEA Centre d'Etudes Nucleaires de Saclay, 91 - Gif-sur-Yvette (France)). Mar 1983. 8p. (CONF-830377—5). NTIS (US Sales Only), PC A02/MF A01. Order Number DE84750300.

From 18. Rencontre de Moriond conference; La Plagne, France (19 Mar 1983).

Portions are illegible in microfiche products.

Estimates for hadron-hadron cross-sections are made using the leading log approximation of Q.C.D. The rise of the total inelastic pp cross-sections at high energy is reproduced, thanks to the competition between the small parton-parton interaction and the large multiplicity of gluons predicted by Q.C.D..

11069 **(IC—80/47) Unity behind diversity in nature.** Pati, J.C. (International Centre for Theoretical Physics, Trieste (Italy)). Mar 1980. 28p. NTIS (US Sales Only), PC A03/MF A01. Order Number DE83704478.

This is a lecture delivered to general audiences of physicists as well as non-physicists at institutions in India, which are listed at the end. The central theme of the lecture is unity behind diversity in Nature. The main topic of the lecture concerns the unity of the basic forces of Nature and the unity of all basic matter, which are used to illustrate the central theme.

11070 **(IC—82/98) Gauge bosons as composites of fermions.** Akdeniz, K.G.; Arik, M.; Hortacsu, M.; Pak, N.K. (International Centre for Theoretical Physics, Trieste (Italy)). Jul 1982. 13p. NTIS (US Sales Only), PC A02/MF A01. Order Number DE83704492.

Non-abelian gauge theories are obtained as effective theories of certain models which at the Lagrangian level contain only spinor fields.

11071 **(IC—82/161) Abrupt onset of scaling violation.** Chela-Flores, J. (International Centre for Theoretical Physics, Trieste (Italy)). Aug 1982. 21p. NTIS (US Sales Only), PC A02/MF A01. Order Number DE83704480.

Paper copy only, copy does not permit microfiche production4 refs.

We present a novel interpretation of deep inelastic scattering data. In our approach the Q^2 evolution from perfect scaling starts with a discontinuity in the structure function F_2, due to strong correlations amongst the sea-quarks. This effect is compatible with the data gathered in the kinematic region available so far, but will bring new predictions in the kinematic region which will be reached in the near future. Precise experimental suggestions are indicated so as to distinguish between QCD incorporating strong correlations leading to abrupt scaling violations, from current QCD without such correlations leading to a smooth logarithmic scale breaking.

11072 **(IC—82/174) Magnetic monopoles and baryon decay.** Pak, N.; Panagiotakopoulos, C.; Shafi, Q. (International Centre for Theoretical Physics, Trieste (Italy)). Aug 1982. 9p. NTIS (US Sales Only), PC A02/MF A01. Order Number DE83704481.

The scattering of a non-relativistic quark from a GUT monopole is affected by the anomalous magnetic moment of the quark. In order that monopole catalysis of baryon decay can occur, it must be assumed that the anomalous magnetic moment decreases sufficiently rapidly below the QCD scale.

11073 **(IC—82/180) Quark approach to Santilli's conjecture on hadronic structure - II.** Animalu, A.O.E. (International Centre for Theoretical Physics, Trieste (Italy)). Aug 1982. 15p. NTIS (US Sales Only), PC A02/MF A01. Order Number DE83704484.

In this paper, we continue an earlier investigation of an exactly soluble relativistic Bohr-type model of the internal structure of the proton (three-quark baryon system) and the pion (quark-antiquark meson system), based on a realization of Santilli's conjecture that the hadronic constituents are extended (non-pointlike) objects. The model is abstracted from an expansion of a Yukawa-type potential between the valence quarks and a massive core, in which the meson or gluon exchange term has the effect of reducing the effective Bohr radius for binding to a value less than the radius of the strong charge sphere (or Compton wavelength) of each constituent, so that appreciable overlap of charge volumes occurs, to within a typical distance of order 0.25F or 1/(800 MeV) in qqq-system, and order 1/(1200 MeV) in qq-bar-system, which are comparable to gluon masses, msub(G) approx.= 800 to 1200 MeV, required by the lattice QCD and the MIT Bag Model. Based on the assumptions that the ground state of the proton has $1s^22s$ valence quark configuration, the non-strange quark mass is msub(p)/3, and the dimensionless strong coupling constant of the Yukawa-type potential is $g^2=1$, the mass of the proton core is determined self-consistently to be 2470 MeV, exactly balancing the quark binding energy so that the valence quarks appear free. The model correctly predicts the masses of the well-known resonant states of the proton with Jsup(P)=1/2⁺ as excited states associated with the configuration $1s2s^2$ and predicts an upper bound (spectroscopic limit) for the mass of the excited states of the proton in ns^2ms configuration, as n→infinity and m→infinity, to be 3409 MeV. Based on a generalization of the model to qq-bar-systems, an upper bound (spectroscopic limit) for the mass of qq-bar in ns^2 configuration, as n→infinity, is found to be 3096 MeV, which is the mass of the J/psi-meson.

11074 **(IC—82/183) Ratio of lifetimes for the D^+ and D^0 mesons.** Ward, B.F.L. (International Centre for Theoretical Physics, Trieste (Italy)). Aug 1982. 14p. NTIS (US Sales Only), PC A02/MF A01. Order Number DE83704485.

Using the SLAC lattice QCD theory, we derive an effective interaction density for the process c+u-bar→s+d-bar+G, where G is a gluon. In this way, we calculate the ratio of lifetimes for the D^+ and D^0 mesons. Our result for this ratio is close to unity.

11075 **(IC—82/191) Perhaps a new unified scaling variable for describing the low- and high-psub(T) processes.** Amaglobeli, N.S.; Esakia, S.M.; Khujadze, A.M.; Kuratashvili, G.O.; Topuria, T.P.; Garsevanishvili, V.R. (International Centre for Theoretical Physics, Trieste (Italy)). Sep 1982. 23p. NTIS (US Sales Only), PC A02/MF A01. Order Number DE83704486.

A new scale invariant parametrization of single particle inclusive spectra in hadron-hadron collisions is proposed. The variable introduced goes over to the well-known scaling variables xsub(F)=2psub(z)/√s and xsub(T)=2psub(T)/√s in the high-psub(z) and high-psub(T) limits, respectively. Some "critical" surfaces are found in the phase space of produced particles, which determine the boundary of the regions with significantly different characteristics (in particular, angular distributions) of generated particles. In one of these two regions a naive statistical model seems to be in good agreement with the data, whereas it does not work in the other region.

11076 **(IC—82/209) High-energy pp and p-barp scattering and the model of geometric scaling.** Fischer, J.; Jakes, P.; Novak, M. (International Centre for Theoretical Physics, Trieste (Italy)). Oct 1982. 11p. NTIS (US Sales Only), PC A02/MF A01. Order Number DE83704488.

The model of geometric scaling is used to predict the evolution of the diffractive dip-peak structure of pp and p-barp differential cross-sections with increasing energy. Previous calculation for pp scattering made by Dias de Deus and Kroll is carried out with new data and their predictions confirmed. Recent data on p-barp scattering are used to make an analogous analysis for this process as well. It turns out that the p-barp differential cross-section behaves analogously, the main difference being that, in the p-barp case, the dip-peak structure should not completely disappear with increasing energy.

11077 **(IPNO-TH—82-22) Cross section for inclusive deep inelastic scattering in the impulse approximation: scale invariance and mass problems.** Nataf, R. (Paris-11 Univ., 91 - Orsay (France). Inst. de Physique Nucleaire). Jun 1982. 42p. (In French). NTIS (US Sales Only), PC A03/MF A01. Order Number DE84750299.

The non-perturbative calculation of inclusive D.I.S. is made in a parton model different from the "naive" one upon two points: 1) the struck quark is off-shell (impulse approximation), 2) kinematical correlations between partons are taken into account. At low Q^2 (4 to 20 GeV^2) the best target mass correction is the Nachtmann one.

11078 (JINR-D—1,2-81-728, pp 51-62) **Effective interactions of quarks and static hadron properties.** Gerasimov, S.B. 1981. (In Russian). NTIS (US Sales Only), PC A16/MF A01. (CONF-8109144—).

From 6. international seminar on high energy physics problems: multiquark interactions and quantum chromodynamics; Dubna, USSR (15 Sep 1981).

Portions are illegible in microfiche products8 refs.

Within the framework of the relativistic model with universal potential of quark interaction hadron static properties are investigated. The model is based on the choice of the universal potential of qq^- interaction, determining effective quark interaction in multiparticle systems. The calculation of masses, magnetic moments radiative meson decay widths baryons and exotic multiquark hadrons is performed. Quark dimensions and "hyper-- fine" structure of hadron radial excitations are discussed as well.

11079 (JINR-D—1,2-81-728, pp 83-102) **Multiquark resonance state.** Shakhbazyan, B.A. 1981. (In Russian). NTIS (US Sales Only), PC A16/MF A01. (CONF-8109144—).

From 6. international seminar on high energy physics problems: multiquark interactions and quantum chromodynamics; Dubna, USSR (15 Sep 1981).

A review of experimental results on multiquark resonance states is presented. Information on resonances is obtained in the course of studying the $n^{12}C$ interaction. Analysed in detail are invariant mass spectra of Λp-dibaryons with quantum numbers I=1/2, Y=1, B=2, S=-1, Λpπ-dibaryons with quantum numbers I=3/2, Y=1, B=2, S=-1 and $\Lambda\pi^{+-}\pi^{+-}$-baryons with quantum numbers I=2, Y=0, B=1, S=-1. The data on particle mass and production cross sections are given. From other possible resonances are singled out dibaryons with quantum numbers I=0, Y=0, B=0, S=-2 in the ΛΛ invariant mass spectrum and tribaryons with quantum numbers I=1, 2, Y=1, B=3, S=-2 in the ΛΛp invariant mass spectrum. The hypercharge selection rule is formulated: in weak gravitational fields the hypercharge of hadron resonances must not exceed a unit.

11080 (JINR-D—1,2-81-728, pp 110-115) **Evident manifestations of four-quark states.** Achasov, N.N.; Devyanin, S.A.; Shestakov, G.N. (AN SSSR, Novosibirsk. Inst. Matematiki). 1981. (In Russian). NTIS (US Sales Only), PC A16/MF A01. (CONF-8109144—).

From 6. international seminar on high energy physics problems: multiquark interactions and quantum chromodynamics; Dubna, USSR (15 Sep 1981).

A possibility of interpretation of some known resonances in the framework of the four-quark model is considered. To the above resonances S*(980) and delta(980) are related. If S*(980) and delta(980) are four-quark states, then their two-photon decay widths should be values by the order less than those of known two-quark mesons (n', f) as well as the widths theoretically predicted in two-quark models. It is pointed out that the discovery of the two-photon tensor meson production is to testify in favour of the existence of four-quark states.

11081 **(LBL—16819) Meson radiation from quark-gluon plasma.** Matsui, T.; Banerjee, B.; Glendenning, N.K. (Lawrence Berkeley Lab., CA (USA)). Nov 1983. Contract AC03-76SF00098. 14p. (CONF-8310245—1). NTIS, PC A02/MF A01. Order Number DE84005199.

From Conference on Hadron substructure in nuclear physics; McCormick's Creek S.P., IN, USA (19 Oct 1983).

Meson formation and radiation at the surface of quark-gluon plasma are studied by making use of the chromoelectric flux tube model. The effect of the surface meson radiation on the hydroexpansion of the plasma fluid is also discussed.

11082 **(PB—83-255075) Lepton spectroscopy.** Bullock, F.W.; Devenish, R.C.E. (Oxford Univ. (UK). Nuclear Physics Lab.). 1983. 185p. NTIS, PC AE10/MF E10.

The complete body of knowledge of the lepton spectrum as it is known today is presented and critically examined. While the emphasis is primarily on the experimental determination of leptonic properties, we also summarize the many theoretical endeavors that have enriched and guided the field, and continue to do so. Complete accounts are given of the current situation on neutrino mass determination, on neutrino oscillations and on the properties of the tau and search for its associated neutrino. The subject of lepton conservation is discussed and all the experimental evidence for nonconservation collected together. The search for leptons other than those belonging the three familiar generations is reviewed. Finally, a brief account is given of the limits on leptonic properties imposed by cosmological arguments.

11083 **Model for the structure of point-like fermions: Qualitative features and physical description.** Fryberger, D. (Stanford Linear Accelerator Center, Stanford University, Stanford, California 94305). *Foundations of Physics;* **13**: No. 11, 1059-1154(Nov 1983). Contract AC03-76SF00515.

A model for the structure of point-like fermions as tightly bound composite states is described. The model is based upon the premise that electromagnetism is the only fundamental interaction. The fundamental entity of the model is an object called the vorton. Vortons are semiclassical monopole configurations of electromagnetic charge and field, constructed to satisfy Maxwell's equations. Vortons carry topological charge and one unit each of two different kinds of angular momenta, and are placed in magnetically bound pair states having angular momentum l = 1/2. The topological charge prevents the mutual annihilation of the vorton pair. The helicity eigenstates of the vortons' intrinsic angular momenta form the basis for a set of internal quantum numbers for the pair which distinquish the different (point-like) pair states. Sixteen fourcomponent spinor states, eight leptonic and eight hadronic, are obtained. Eleven of these are identified with the quantum numbers of the experimentally known particles: e, ν/sub e/, μ, ν/sub μ/, tau, ν/sub tau/; p, n, Λ, Λ/sub c/, and b. Thus one new heavy lepton with its neutrino and three new quark states are predicted. Some possibilities for the extension of this model are discussed.

11084 **(IC—82/80) Broken supersymmetries in high energy physics.** Rajpoot, S.; Taylor, J.G. (International Centre for Theoretical Physics, Trieste (Italy)). Jun 1982. 18p. NTIS (US Sales Only), PC A02/MF A01. Order Number DE83704490.

The renormalisation group analysis of the running coupling constants in the hierarchies of N-extended supersymmetric simple unification schemes is presented. For proton lifetimes of order 10^{30}

years the scale(s) of supersymmetry breaking are of order 10^{12} GeV. In local realisations of such supersymmetries, such high mass-scales lead to gravitinos with masses in the 10^5 GeV range. Gravitinos this massive decay too long before the time of helium synthesis to be of relevance in the early universe.

11085 **(IC—82/99) Approach towards minimality - supersymmetry at the preonic or pre-preonic level.** Pati, J.C.; Salam, A. (International Centre for Theoretical Physics, Trieste (Italy)). Jul 1982. 40p. NTIS (US Sales Only), PC A03/MF A01. Order Number DE83704493.

Believing that a fundamental theory ought to be manifestly minimal, elegant and somehow unique, we make a beginning in this note in arriving at a minimal system of fundamental substructures (pre-preons), which could give rise to preons of the flavon-chromon type proposed some time ago. Our approach points naturally to a need for supersymmetry at the level of preons or pre-preons. Spin-1/2 flavons and spin-0 chromons appear to receive their simplest interpretation as Fermi-Bose partners of a supersymmetric theory; the emergence of the concepts of flavour and colour, in this picture, is synonymous with supersymmetry-breaking. An alternative picture, in which flavons and chromons arise as Fermi and Bose-components of different superfields and thereby permit the emergence of the concepts flavour and colour prior to supersymmetry-breaking, is also considered. A simple pre-preonic model presented here suggests three quark-lepton families with tau being distinct from e and μ in some of its interactions. The ideas of building supersymmetric Yang-Mills theories with pre-preons and supergravity-theories of preons as composite theories are considered.

11086 **(LA-UR—83-3250) Time reversal invariance in polarized neutron beta decay.** Bowles, T.J.; Moses, J.D.; Sunier, J.; Brown, R.E.; Lisowski, P.; Mampe, W.; Liaud, P. (Los Alamos National Lab., NM (USA); Institut Max von Laue - Paul Langevin, 38 - Grenoble (France); Centre Universitaire de Chambery, 73 (France)). 1983. Contract W-7405-ENG-36. 5p. (CONF-8311112—2). NTIS, PC A02/MF A01. Order Number DE84003781.

From Workshop on reactor based fundamental physics; Grenoble, France (7 Nov 1983).

Measurements of the triple correlation σ/sub n/(P/sub e/ x P/sub nu/) in polarized neutron beta decay provide a test of time reversal violation. An experiment that will substantially improve the current limits on this correlation is discussed. 11 references.

11087 **(LBL—16747) Chiral anomalies and differential geometry.** Zumino, B. (Lawrence Berkeley Lab., CA (USA)). Oct 1983. Contract AC03-76SF00098. 25p. (CONF-8308144—1). NTIS, PC A02/MF A01. Order Number DE84004637.

From Lectures in physics; Les Houches, France (1 Aug 1983).

Some properties of chiral anomalies are described from a geometric point of view. Topics include chiral anomalies and differential forms, transformation properties of the anomalies, identification and use of the anomalies, and normalization of the anomalies. 22 references. (WHK)

11088 **Enhanced T-nonconserving nuclear moments.** Haxton, W.C.; Henley, E.M. (Theoretical Division, Los Alamos National Laboratory, Los Alamos, New Mexico 87545). *Physical Review Letters;* **51**: No. 21, 1937-1940(21 Nov 1983).

T- and P-nonconserving nuclear moments induced by a parity- and CP-nonconserving interaction in the QCD Lagrangian are discussed. The mixing of nearly degenerate opposite-parity ground-state doublets in certain deformed nuclei leads to electric dipole and magnetic quadrupole moments 10^1—10^3 and 10^3—10^4 times larger, respectively, than those generated by the unpaired valence nucleon.

11089 **Parametrization of the Kobayashi-Maskawa matrix.** Wolfenstein, L. (Department of Physics, Carnegie-Mellon University, Pittsburgh, Pennsylvania 15213). *Physical Review Letters;* **51**: No. 21, 1945-1947(21 Nov 1983).

The quark mixing matrix (Kobayashi-Maskawa matrix) is expanded in powers of a small parameter λ equal to sinθ/sub c/ = 0.22. The term of order λ^2 is determined from the recently measured B lifetime. Two remaining parameters, including the CP-nonconservation effects, enter only the term of order λ^3 and are poorly constrained. A significant reduction in the limit on ϵ'/ϵ possible in an ongoing experiment would tightly constrain the CP-nonconservation parameter and could rule out the hypothesis that the only source of CP nonconservation is the Kobayashi-Maskawa mechanism.

6454 Field Theory

REFER ALSO TO CITATION(S) 11063, 11071, 11084, 11085, 11088, 11167

11090 **(ANL-HEP-CP—83-61) Scales and upper bounds of classical monopole solutions.** Zachos, C.K. (Argonne National Lab., IL (USA)). Oct 1983. Contract W-31-109-ENG-38. 6p. (CONF-8310227—1). NTIS, PC A02/MF A01. Order Number DE84004005.

From Monopole '83 conference; Ann Arbor, MI, USA (6 Oct 1983).

The masses of GUT monopoles are bounded from above by a limit roughly twice the Prasad-Sommerfield limit, and thus depend only weakly on Higgs masses and the electroweak scale. 7 references.

11091 **(IC—80/1) Towards a dynamical preon model.** Krolikowski, W. (International Centre for Theoretical Physics, Trieste (Italy)). Jan 1980. 15p. NTIS (US Sales Only), PC A02/MF A01. Order Number DE83704476.

We discuss further the recently proposed "primordial" quantum chromodynamics, where a massive Fermi-Bose couple of two colour triplets delta and chi of spin 1/2 and 0, respectively, and of equal charge - 1/3 interacts with a colour octet of massless vector gluons. The "preons" delta and chi form bound states νsub(e) = delta chi-bar, e=delta(chichi)sub(P) (colour singlets) and u=delta-bar chi-bar, d=delta-bar (chichi)sub(P) (colour triplets). Other preon bound states also exist and are briefly reviewed.

11092 **(IC—80/14) Lepton and quark families as quantum-dynamical systems.** Krolikowski, W. (International Centre for Theoretical Physics, Trieste (Italy)). Feb 1980. 13p. NTIS (US Sales Only), PC A02/MF A01. Order Number DE83704477.

We conjecture that the observed four lepton and quark families (νsub(N)), (esub(N)) and (usub(N)), (dsub(N)), if considered in the space of generations N = 1,2,3..., are quantum-dynamical systems, much like particles of the first quantization are quantum-dynamical systems in the position space. We call this far-going conjecture the "zeroth quantization" and discuss its consequences for lepton and quark mass spectra.

11093 **(IC—82/14) Derivation of the conventional basis for the classical Lie algebra generators.** Karadayi, H.R. (International Centre for Theoretical Physics, Trieste (Italy)). Jan 1982. 13p. NTIS (US Sales Only), PC A02/MF A01. Order Number DE83704434.

The explicit construction of the classical Lie algebra generators in the conventional Gell-Mann basis is derived for all irreducible unitary representations of all classical groups. The main framework is based on a description of the simple roots of the classical Lie algebras such that the inter-relations implied by the Cartan matrix of the group among these simple roots are explicit within this description.

11094 **(IC—82/50) Spontaneous compactification of a (4+d)-dimensional Kaluza-Klein theory into M_4xG/H for arbitrary G and H.** Randjbar-Daemi, S.; Percacci, R. (International Centre for Theoretical Physics, Trieste (Italy)). May 1982. 7p. NTIS (US Sales Only), PC A02/MF A01. Order Number DE83704444.

Einstein-Yang-Mills theory in 4+d dimensions admits a solution of the form M_4xG/H, where M_4 is Einstein and G/H is symmetric, if the gauge group is H (or larger). The gauge fields of this solution are topologically nontrivial. The symmetry group is

G_4xGxH, G_4 being the isometry group of M_4; M_4 could be Minkowski or anti-de-Sitter space.

11095 **(IC—82/52) Finite temperature SU(2) gauge theory with external magnetic field.** Fujimoto, Y.; Fukuyama, T. (International Centre for Theoretical Physics, Trieste (Italy)). May 1982. 20p. NTIS (US Sales Only), PC A02/MF A01. Order Number DE83704446.

We employ the heat kernel method to evaluate the effective potential of the SU(2) gauge theory (with scalar triplet) when both external magnetic field and temperature are applied to it. The calculation is performed in high temperature approximation.

11096 **(IC—82/56) Renormalization of the QEMD of a dyon field.** Panagiotakopoulos, C. (International Centre for Theoretical Physics, Trieste (Italy)). May 1982. 17p. NTIS (US Sales Only), PC A02/MF A01. Order Number DE83704447.

A renormalized quantum electromagnetodynamics (QEMD) of a dyon field is defined. Finite and n independent answers can be obtained in each order of the loop expansion for all processes. The electric and magnetic charges are not constrained with the Dirac condition and therefore perturbation theory can be made reliable. The renormalized theory is found to possess exact dual invariance. Comparisons with the general QEMD of electric and magnetic charges are made.

11097 **(IC—82/57) Towards an effective bilocal theory from QCD in a background.** Magpantay, J.A. (International Centre for Theoretical Physics, Trieste (Italy)). May 1982. 26p. NTIS (US Sales Only), PC A03/MF A01. Order Number DE83704448.

Using the path integral, we show how we can get background gauge invariant bilocals (to be identified with mesons) from QCD in a nontrivial ground state. We discuss in this paper mainly the formal manipulations, especially how to deal with the zero modes. We also discuss the large N limit of QCD in a background.

11098 **(IC—82/58) Stability domain of stationary solitons in a many-charge field model with non-Abelian internal symmetry.** Chakrabarti, S. (International Centre for Theoretical Physics, Trieste (Italy)). May 1982. 10p. NTIS (US Sales Only), PC A02/MF A01. Order Number DE83704449.

Stability, in the Lyapunov sense, of solitons of Synge's model extended to non-Abelian symmetry SU(2)xU(1) is considered. It is shown that the stability domain is determined by the inequalities $\Sigma sub(i,k=1)^2(delta\ Qsub(i)sup((0))/delta\ \omega sub(k)).\omega sub(i)\omega sub(k)<0$ and $\omega_1\omega_2>0$. The first condition is a necessary one for stability domain of a soliton solution in any time-reversible many-charge model with second-order time derivatives.

11099 **(IC—82/97) Avoiding domain wall problem in SU(N) grand unified theories.** Fujimoto, Y.; Zhiyong, Z. (International Centre for Theoretical Physics, Trieste (Italy)). Aug 1982. 12p. NTIS (US Sales Only), PC A02/MF A01. Order Number DE83704491.

We look for the possibility of embedding the discrete subgroup of U(1)-Pecci-Quinn symmetry into the continuous one to avoid the domain wall problem. We find, within some restricted context, among various SU(N) models only one-family SU(5) and SU(6).

11100 **(IC—82/101) Precocious unification in simple GUTS.** Ozer, M. (International Centre for Theoretical Physics, Trieste (Italy)). Jul 1982. 14p. NTIS (US Sales Only), PC A02/MF A01. Order Number DE83704479.

We investigate how simple Grand Unified Theories (GUTS) with precocious unification mass can be constructed. The maximal local symmetry of 2mn left-handed fermions and their left-handed antiparticles is shown to be a viable candidate, where m and n are the number of families and colours respectively. The predictions of such a model are studied.

11101 **(IC—82/113) Class of simple solutions of the SU(2) Yang-Mills equations.** Raczka, P. Jr. (International Centre for Theoretical Physics, Trieste (Italy)). Jul 1982. 23p. NTIS (US Sales Only), PC A02/MF A01. Order Number DE83704433.

We investigate the solutions of SU(2) Yang-Mills equations of the form $Asub(\mu)(x)=Asub(\mu)(R)$, $R=lambda\nu xsup(\nu)$, $lambda\nu=$constant four-vector. We prove, that for null lambda only embedded maxwellian solutions exist. For spacelike and timelike lambda we reduce the problem to the solution of the system of two ordinary differential equations for two unknown functions. Some explicit solutions are given.

11102 **(IC—82/140) No domain wall problem in SU(N) grand unified theory.** Fujimoto, Y.; Shigemoto, K.; Zhiyong, Z. (International Centre for Theoretical Physics, Trieste (Italy)). Jul 1982. 19p. NTIS (US Sales Only), PC A02/MF A01. Order Number DE83704435.

It is shown that a wide class of SU(n) x U(1)sub(P.Q.) Grand Unified Theories can avoid the domain wall problem.

11103 **(IC—82/142) Trivial solution to the domain wall problem.** Christos, G.A. (International Centre for Theoretical Physics, Trieste (Italy)). Aug 1982. 5p. NTIS (US Sales Only), PC A02/MF A01. Order Number DE83704436.

Short communication.

11104 **(IC—82/175) Fermion mass ratios and low energy grand unification.** Ozer, M. (International Centre for Theoretical Physics, Trieste (Italy)). Aug 1982. 7p. NTIS (US Sales Only), PC A02/MF A01. Order Number DE83704482.

Within the framework of the "naturalness" hypothesis for the Yukawa couplings, fermion mass ratios are shown to require the energy scale for grand unification and the energy scale for SU(4)sub(colour) breaking to be greater than 10^9 - 10^{10} GeV. Hence very low energy unification and neutron-antineutron oscillations in grand unified theories are incompatible with the "naturalness" of the Yukawa couplings and the masses of the Higgs scalars.

11105 **(IC—82/177) Low mass-scale parity restoration in expanded gauge theories.** Rajpoot, S. (International Centre for Theoretical Physics, Trieste (Italy)). Jul 1982. 11p. NTIS (US Sales Only), PC A02/MF A01. Order Number DE83704483.

It is shown that schemes of grand unification with $SU(2n)^4$ gauge symmetry permit the embedding of the left-right symmetric SU(2)sub(L)xSU(2)sub(R)xU(1)xSU(3) intermediate symmetry at relatively low energies (between 250 GeV and 1 TeV) as well as allowing light unification mass-scales ($<=10^5$ TeV) if $n>=3$ for values of the weak angle $Sin^2thetasub(W)$ and the strong coupling $\alpha sub(s)$ in the ranges $0.20<=Sin^2thetasub(W)<=0.25$, $0.10<=\alpha sub(s)<=0.15$.

11106 **(IC—82/199) Uniqueness of the SU(2) instanton.** Randjbar-Daemi, S. (International Centre for Theoretical Physics, Trieste (Italy)). Oct 1982. 8p. NTIS (US Sales Only), PC A02/MF A01. Order Number DE83704437.

We present a simple geometric technique to find the SO(5) invariant solutions of the SU(2) gauge field equation on S^4. These solutions have non-vanishing second Chern classes with opposite signs. We prove that they are unique and that their uniqueness follows from their SO(5) invariance.

11107 **(IC—82/233) Superconformal current multiplet.** Smailagic, A. (International Centre for Theoretical Physics, Trieste (Italy)). Dec 1982. 11p. NTIS (US Sales Only), PC A02/MF A01. Order Number DE83704442.

We consider a derivation of a superconformal current multiplet based directly on superconformal algebra. This gives usual multiplet of currents without anomalies, directly in terms of "improved" quantities and without reference to a particular Lagrangian model.

11108 (JINR—D-1,2-81-728, pp 27-37) **Functional approaches to two-dimensional QCD.** Ebert, D. (Akademie der Wissenschaften der DDR, Berlin-Zeuthen. Inst. fuer Hochenergiephysik). 1981. NTIS (US Sales Only), PC A16/MF A01. (CONF-8109144—).

From 6. international seminar on high energy physics problems: multiquark interactions and quantum chromodynamics; Dubna, USSR (15 Sep 1981).

Different functional approaches to QCD_2 are reviewed and a comparison of their results is made. In particular it has been noticed that seemingly quite different techniques lead to quite similar results. The only exception here is the bosonization formalism which is essentially a strong coupling approach. An important question is, of course, how and to which extent one can solve the analogous dynamical equations for QCD in 1+3 space-time. In the latter theory the transverse gluonic degrees of freedom may well form new gluonic collective excitations absent in QCD_2. Furthermore, they are expected to play an important role for the confinement mechanism and the properties of the vacuum.

11109 (JINR-D—1,2-81-728, pp 21-26) **Topological excitations and Monte-Carlo simulation of the Abelian-Higgs model.** Ranft, J. (Karl-Marx-Universitaet, Leipzig (German Democratic Republic)). 1981. NTIS (US Sales Only), PC A16/MF A01. (CONF-8109144—).

From 6. international seminar on high energy physics problems: multiquark interactions and quantum chromodynamics; Dubna, USSR (15 Sep 1981).

The phase structure and topological excitations, in particular the magnetic monopole current density, are investigated in a Monte-Carlo simulation of the lattice version of the four-dimensional Abelian-Higgs model. The monopole current density is found to be large in the confinement phase and rapidly decreasing in the Coulomb and Higgs phases. This result supports the view that confinement is neglected with the condensation of monopole-antimonopole pairs.

11110 **(KFKI—1983-39) Schwinger model in temporal gauge.** Balog, J.; Hrasko, P. (Hungarian Academy of Sciences, Budapest. Central Research Inst. for Physics). Apr 1983. 22p. NTIS (US Sales Only), PC A02/MF A01. Order Number DE83704452.

Exact solution of the zero-mass Schwinger model is given in temporal gauge in the presence of arbitrary background charge density. The structure of the Hilbert space is found to be considerably simpler than in Landau gauge. Unitarily implementable c-number gauge transformations are compared with the corresponding transformations in the Landau gauge. The operator solution is extended to the many-flavour model and a procedure is suggested for the construction of the physical Hilbert space.

11111 **Consistent formulation of fermions on a Minkowski lattice p.** Bender, C.M.; Milton, K.A.; Sharp, D.H. (Department of Physics, Washington University, St. Louis, Missouri 63130). *Physical Review Letters;* **51**: No. 20, 1815-1818(14 Nov 1983).

The finite-element approach described in a previous paper approximates the operator Dirac equation on a lattice in such a way that the equal-time anticommutation relations are exactly maintained. Moreover, the approximation preserves unitarity (and chiral invariance in the massless theory) and there is no fermion doubling.

11112 **Mass inequalities for quantum chromodynamics.** Weingarten, D. (Department of Physics, Brown University, Providence, Rhode Island 02912; and IBM Thomas J. Watson Research Center, Yorktown Heights, New York 10598). *Physical Review Letters;* **51**: No. 20, 1830-1833(14 Nov 1983).

For n-flavor lattice QCD rigorous lower bounds are derived on the masses of baryons, for even n> or =6, and on the masses of flavor-nonsinglet mesons, for even n> or =2. The lower bounds are proportional to the pion mass. The consequence of these inequalities for chiral-symmetry breaking is considered.

6455 Scattering Theory

11113 **(JINR—E-5-82-669) Asymptotic behaviour of the scattering phase for non-trapping metrics.** Popov, G.S. (Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of Computing Techniques and Automation). 1982. 15p. NTIS (US Sales Only), PC A02/MF A01. Order Number DE83704451.

The asymptotic behaviour of the scattering phase is considered at infinity for an elliptic, self-adjoint, second order differential operator H, defined either in Rsup(n) or in an unbounded domain Ω contains Rsup(n) with Dirichlet or Neumann boundary conditions. The operator H has the form H=- Δsub(g)+hD+V where Δsub(g) is the Laplace-Beltrami operator related to a Riemann metric g in anti Ω. Provided a non-trapping hypothesis is fulfilled and H coincides with the Laplace operator Δ in a neighbourhood of infinity, an asymptotic development of the scattering phase s(lambda) is obtained for lambda → infinity. The first coefficients in this development are found.

11114 **Unified geometrical approach to relativistic particle dynamics.** Balachandran, A.P.; Marmo, G.; Mukunda, N.; Nilsson, J.S.; Simoni, A.; Sudarshan, E.C.G.; Zaccaria, F. (Center for Particle Theory and Department of Physics, The University of Texas at Austin, Austin, Texas 78712). *Journal of Mathematical Physics (New York);* **25**: No. 1, 167-176(Jan 1984). Contract AC02-76ER03533.

Models for systems of relativistic particle dynamics are reviewed in terms of a geometrical setting for constraint dynamics. They are derived from the same grand abstract space by means of a common reduction procedure and are put in correspondence with invariant subgroups of the Poincare group. A new model corresponding to the identity subgroup is also discussed.

11117 **(CEA-CONF—6769) Pion photo- and electroproduction on light nuclei.** Laget, J.M. (CEA Centre d'Etudes Nucleaires de Saclay, 91 - Gif-sur-Yvette (France)). May 1983. 26p. (CONF-830588—5). NTIS (US Sales Only), PC A03/MF A01. Order Number DE84750330.

From Delta-Nucleus dynamics symposium; Argonne, IL, USA (2 May 1983).

Portions are illegible in microfiche products.

The mechanisms which govern the absorption of a virtual or real photon by a nucleus at intermediate energy are presented. The method of analysis is based on the non relativistic reduction of a few relevant diagrams. Comparison of it to more conventional approaches, and estimation of its limits are shown. It is particularly well suited to the study of the few body systems.

11118 **(JAERI-M—83-221) Evaluation of neutron nuclear data for ^{12}C.** Shibata, K. (Japan Atomic Energy Research Inst., Tokai, Ibaraki. Tokai Research Establishment). Dec 1983. 72p. (NEANDC(J)—95/U; INDC(JAP)—82/L). Japan Atomic Energy Research Inst., Tokai-mura, Nakagun, Ibaraki-ken 319-11.

Neutron nuclear data of ^{12}C have been evaluated for JENDL-3 in the energy range from 10^{-5} eV to 20 MeV. Evaluated quantities are the total, elastic and inelastic scattering, radiative capture, photonproduction, (n,p), (n,d) and (n,α) reaction cross sections and the angular or energy distribution of neutrons and photons. The total cross section below the threshold energy of the inelastic scattering has been calculated on the basis of the R-matrix theory. Three discrete levels have been taken into account for the inelastic scattering. 63 references.

11119 **Spin alignment and phase angles in ^{12}C+ ^{12}C inelastic scattering.** Willett, S.J.; Korotky, S.K.; Phillips, R.L.; Bromley, D.A.; Erb, K.A. (Wright Nuclear Structure Laboratory, Yale University, New Haven, Connecticut 06511). *Physical Review* [*Section*] *C: Nuclear Physics;* **28**: No. 5, 1986-2000(Nov 1983).

The spin alignment A and the relative phase angle β between the m = +2 and -2 substates populated in ^{12}C+ ^{12}C(2$_1^+$) inelastic scattering were measured over a wide range of particle scattering angles ($53^\circ < \theta$/sub c.m./$< 101^\circ$) and interaction energies (15<E/sub c.m./<33 MeV). Although the substate population parameters depend rather strongly on reaction angle, the angle-averaged alignment is markedly enhanced at energies where either broad or narrow maxima occur in σ(E), at least below E/sub c.m./ = 26 MeV. Above that energy variations in the alignment become damped with respect to both bombarding energy and reaction angle. The relative phase $\beta(\theta)$ is approximately linear in θ at most energies. For energies below E/sub c.m./ = 26 MeV corresponding to gross structure maxima in the inelastic cross sections, the measured dependence of the phase on reaction angle suggests that the reaction is dominated at these energies by individual entrance and exit channel partial waves L and L′, respectively, and that these are related by L′ = L-2. Thus a strongly aligned configuration can be associated with the maxima. At neighboring energies no evidence for such alignment was found. Calculations with the band-crossing, diffraction, distorted-wave Born approximation, and barrier-top models were compared to the measurements. None provide an adequate representation of the data.

11120 **Isospin effects in πip12C, ^{13}C, and ^{14}C at 65 and 80 MeV.** Blecher, M.; Gotow, K.; Burman, R.L.; Hynes, M.V.; Leitch, M.J.; Chant, N.S.; Rees, L.; Roos, P.G.; Bertrand, F.E.; Gross, E.E. (Virginia Polytechnic Institute and State University, Blacksburg, Virginia 24061). *Physical Review* [*Section*] *C: Nuclear Physics;* **28**: No. 5, 2033-2041(Nov 1983).

Elastic scattering cross sections for π^{+-} scattering from ^{12}C, ^{13}C, and ^{14}C are presented for pion energies of 65 and 80 MeV and for scattering angles from 20° to 120°. Energy dependent isospin effects are observed. The cross sections were fit with the Kisslinger potential, and the potential strength parameters show an (N-Z)/A dependence similar to that predicted by the impulse approximation at 65 MeV, but not at 80 MeV. Calculations using the Siciliano potential, which contains the explicit isospin dependence of the Lorentz-Lorenz-Ericson-Ericson effect plus isoscalar, isovector, and isotensor terms, indicate the importance and energy dependence of absorption effects. Finally a "model independent" parametrization of the neutron density suggests a neutron excess at the surface of ^{13}C but not ^{14}C.

6514 Nuclear Properties And Reactions, A=20-38, Theoretical

11121 **Observation of anomalously short mean free paths of projectile fragments of 1.85A-GeV ^{40}Ar in CR-39 etched track detector.** Tincknell, M.L.; Price, P.B.; Perlmutter, S. (Space Sciences Laboratory, Department of Physics, University of California, Berkeley, California 94720). *Physical Review Letters;* **51**: No. 21, 1948-1951(21 Nov 1983). Contract AC03-76SF00098.

When fragments of 1.85A-GeV ^{40}Ar projectiles are observed in a CR-39 etched track detector, anomalously short mean free paths of secondary nuclei with 11> or =Z> or =17 are found within the first 2 cm after their production, at ~3 standard deviations. This confirms the previous reports of this "anomalon" effect in nuclear emulsion. The data can be fitted by the hypothesis that ~3.6% of the secondaries have a mean free path of ~1.0 cm and infinite lifetime.

6515 Nuclear Properties And Reactions, A=39-58, Theoretical

11122 **(CEA-CONF—6720) Research on giant resonances at high excitation energy by alpha particle inelastic scattering.** Bonin, B.; Alamanos, N.; Arvieux, J. (CEA Centre d'Etudes Nucleaires de Saclay, 91 - Gif-sur-Yvette (France)). Apr 1983. 15p. (In French). (CONF-830471—2). NTIS (US Sales Only), PC A02/MF A01. Order Number DE84750301.

From Saturne study meeting; Maine-et-Loire, France (25 Apr 1983).

Portions are illegible in microfiche products.

Inelastic cross sections of 340-480 MeV alpha particles on ^{208}Pb, ^{116}Sn and ^{58}Ni targets have been measured up to 60 MeV excitation energy in a large angular range. The experimental data have been analyzed by a new method. The response function provides informations on electric giant resonances and exhibits the presence of new concentrations of multipolar force of very high excitation energy.

11123 **(CEA-N—2337) Study of giant resonances at high excitation energy by alpha inelastic scattering.** Bonin, B. (CEA Centre d'Etudes Nucleaires de Saclay, 91 - Gif-sur-Yvette (France)). Jun 1983. 169p. (In French). NTIS (US Sales Only), PC A08/MF A01. Order Number DE84750306.

Angular distributions of 340 and 480 MeV alpha particles inelastically scattered by ^{208}Pb, ^{116}Sn and ^{58}Ni up to 60 MeV of excitation have been measured. The experimental inelastic spectra have been analysed by means of a new global method. The repartition of multipole strength shows the already known low energy giant resonances into more details. New high energy giant resonances are observed.

11124 **(PB—83-253781) Folding model analysis of alpha-particle elastic scattering with a semirealistic density dependent effective interaction.** Kobos, A.M.; Brown, B.A.; Hodgson, P.E.; Satchler, G.R.; Budzanowski, A. (Oxford Univ. (UK). Nuclear Physics Lab.). 1982. 27p. NTIS, PC AE04/MF E04.

The aim of this study was to examine the density dependent effective interaction, DDEI, applied in the double-folding model and to investigate whether folding model analyses of alpha particle elastic scattering could be used to calculate nuclear matter densities. Accordingly, differential cross-sections for the elastic scattering of alpha particles from (40)Ca, (46,48,50)Ti, (58)Ni, (90)Zr and (208)Pb at 140 MeV and from (58,60,62,64)Ni at 172 MeV were analyzed using the model with a semirealistic DDEI based on the M3Y interaction for the real potential and various phenomenological imaginary potentials. Good fits with consistent parameters of the model were obtained. The application of folding model analyses of alpha particle elastic scattering to the determination of nuclear matter density distribution was critically examined.

11125 **Observation of rigid nuclear rotation.** Price, H.G.; Lister, C.J.; Varley, B.J.; Gelletly, W.; Olness, J.W. (Daresbury Laboratory, Warrington WA44AD, United Kingdom). *Physical Review Letters;* **51**: No. 20, 1842-1845(14 Nov 1983). Contract AC02-76CH00016.

States in ^{84}Zr with angular momenta up to 34h and rotational frequency 1.3 MeV have been studied with the techniques of discrete-line gamma-ray spectroscopy. The measurements probe the region beyond a second upbend. In this region the results are consistent with the nucleus having undergone a transition to an axially symmetric shape with $\beta = 0.43 +- 0.06$ and $\gamma = 3° +- 6°$ which rotates with the rigid-body moment of inertia.

11126 **Beta decay of ^{75}Rb to low-lying levels in ^{75}Kr.** Kern, B.D.; Toth, K.S.; Moltz, D.M.; Lin, J.; Avignone, F.T. III; Noma, H.; Leander, G.A. (University of Kentucky, Lexington, Kentucky 40506). *Physical Review [Section] C: Nuclear Physics;* **28**: No. 5, 2168-2170(Nov 1983).

The isotope ^{75}Rb was produced via the ^{58}Ni(^{20}Ne,p2n) reaction and mass separated with an on-line isotope separator. Its half-life was determined to be 21.4 +- 1.0 sec. Twenty-one γ rays were placed in a partial decay scheme with levels in ^{75}Kr up to 1042.4 keV in excitation. The data are consistent with the existence of previously proposed $(5/2)^+$ ground-state and $(3/2)^-$ first-excited-state rotational bands in ^{75}Kr, and with a $(3/2)^-$ or $(5/2)^-$ assignment for the ground state of ^{75}Rb.

11127 **Analog giant resonance excitation via the (n,p) reactions.** Brady, F.P. (University of California, Davis, CA 95616). *IEEE (Institute of Electrical and Electronics Engineers) Transactions on Nuclear Science;* **NS-28**: No. 2, 1250-1254(Apr 1981). (CONF-801111—).

From 6. conference on application of accelerators in research and industry; Denton, TX, USA (3 Nov 1980).

The direct (n,p) reaction is a selective tool for studying isovector transitions which are induced by an isovector interaction and in which there is a transfer of one unit of isospin to the target. Furthermore the (n,p) selection rule $\Delta T_3 = \Delta T = +1$ implies that only T=T /SUB o/ (tgt) + 1 states (the analogs of T /SUB o/ + 1 states of the target) are excited. The authors' measurements of (n,p) spectra on selected targets ranging from ^{4}He to ^{209}Bi reveal that the excitations of the analogs of giant resonance states particularly the "E1" GDR and "M1" are strong for light nuclei. Essentially 100% of the GDR sum rule, as given by the Goldhaber-Teller (GT) model, is exhausted. For M1 transitions the use of matrix elements from B-decay allows the central S=1 part of the isovector interaction to be determined. A larger-than-expected N-Z dependence is found for the Ni(n,p) cross sections of the even Ni isotopes. For heavy nuclei the filling of neutron ahead of proton orbitals produces the expected blocking of (n,p) to the analog GDR excitations, and low-lying resonances in ^{209}Bi(n,p) appear to be isovector E2 analogs.

6516 Nuclear Properties And Reactions, A=59-89, Theoretical

11128 **(CEA-CONF—6682) Several applications of the DWBA diffractional model of quasi-elastic reactions induced by heavy ions.** Mermaz, M.C. (CEA Centre d'Etudes Nucleaires de Saclay, 91 - Gif-sur-Yvette (France)). Mar 1983. 21p. (CONF-830384—3). NTIS (US Sales Only), PC A02/MF A01. Order Number DE84750305.

From International symposium on nuclear physics at large tandem accelerators; Legnaro-Padova, Italy (15 Mar 1983).

Portions are illegible in microfiche products.

Several applications of a DWBA formula due to Blair-Austern and Hahne and based on the diffractional model are presented. This formula can be considered as an excellent analytical fit of the ERF-DWBA model. The spectroscopical strength is lost by this strong simplification. The dynamics of the reaction: Q and L matching are properly treated. The first application is the straightforward computation of the direct transfer cross section induced by heavy ions for discrete levels populated by a one-step process. The second application is a Regge-pole analysis of alpha transfer reaction for a zero spin system; cross section had been measured between zero and 180° center-of-mass angles, the third application is the analysis of elastic scattering with backward transfer of particles between two identical colliding cores. In these two last cases the general DWBA formula of Blair-Austern-Hahne is heavily and naturally simplified due to the fact we are dealing with zero spin system and in addition for the third case with reaction Q-value strictly equal to zero. Finally the fourth application is the computation of the double differential cross section dsigma/domegadEf of the continuum states.

11129 **Decay of ^{77}Sr and level structure of ^{77}Rb.** Lister, C.J.; Varley, B.J.; Alburger, D.E.; Haustein, P.E.; Saha, S.K.; Olness, J.W.; Price, H.G.; Irving, A.D. (Department of Physics, Schuster Laboratory, University of Manchester, Manchester M139PL, United Kingdom). *Physical Review [Section] C: Nuclear Physics;* **28**: No. 5, 2127-2135(Nov 1983).

An oil vapor helium-jet transfer system was used to study the β^+ decay of ^{77}Sr produced in the ^{40}Ca(^{40}Ca,2pn)^{77}Sr reaction at 110—130 MeV. Singles and coincidence measurements established the decay to four levels in ^{77}Rb and allowed measurements of T/sub 1/2/ = 9.0 +- 0.2 sec for the decay half-life and Q/sub EC/ = 6986 +- 227 keV for the total decay energy. In-beam studies of the p ^{40}Ca(^{40}Ca,3pγ) ^{77}Rb reaction were made at 117 MeV. Two distinct bands were observed in ^{77}Rb and probable spin and parity assignments were made. These data favor J/sup π/ = $(5/2)^+$ for the ^{77}Sr ground state. The ^{77}Rb bands are compared to neighboring odd-A nuclei and to recent calculations.

11130 **Nuclear structure studies in the medium mass (A $\approx$70) region.** Ramayya, A.V. (Vanderbilt University, Nashville, TN 37235). *IEEE (Institute of Electrical and Electronics Engineers) Transactions on Nuclear Science;* **NS-28**: No. 2, 1273-1278(Apr 1981). (CONF-801111—). Contract AS05-76ER05034.

From 6. conference on application of accelerators in research and industry; Denton, TX, USA (3 Nov 1980).

The in-beam Y-ray studies on several nuclei in A $\approx$ 70 region, have revealed highly collective band structures of the following types: ground state band, one or two even spin positive parity bands with 8^+ as band head, odd and even spin negative parity bands, $\Delta J = 1$ even parity bands with 2^+ as band heads, and deformed bands built on the first excited 0^+ states. Not all these types of bands have been observed in all of the nuclei in this mass region. The even spin positive parity bands with 8^+ as band head and the negative parity bands can be understood in terms of rotational alignment model. The Interacting Boson Model calculations reproduce the negative parity bands and the $\Delta J = 1$ even parity bands with 2^+ as band head. Both these models have to be further investigated as to the validity of them in describing nuclei in the mass region A $\approx$ 70. Recent dynamic deformation model calculations of Kumar support the shape coexistence picture for ^{72}Se, which explains the deformed bands built on the first excited 0^+ states.

6517 Nuclear Properties And Reactions, A=90-149, Theoretical

11131 **Shell effects at high angular momentum.** Deleplanque, M.A.; Macchiavelli, A.O.; Diamond, R.M.; Stephens, F.S.; Dines, E.L.; Draper, J.E. (Nuclear Science Division, Lawrence Berkeley Laboratory, University of California, Berkeley, California 94720). *Physical Review Letters;* **51**: No. 20, 1854-1857(14 Nov 1983). Contract AC03-76SF00098.

Major-shell effects are seen in the unresolved γ-ray spectra coming from high-spin states in the transition region: ^{164}Er to ^{160}Er. The angular momentum alignments in the valence shell, which are spread in frequency in the heavier nuclei, are compressed into the low-frequency region in the lighter nuclei and separate almost completely from the angular momentum contributions due to the next higher major (proton) shell.

11132 **Suppression of neutron emission after heavy-ion fusion: Is shape relaxation affected by a superdeformed minimum?.** Kuehn, W.; Chowdhury, P.; Janssens, R.V.F.; Khoo, T.L.; Haas, F.; Kasagi, J.; Ronningen, R.M. (Argonne National Laboratory, Argonne, Illinois 60439). *Physical Review Letters;* **51**: No. 20, 1858-1861(14 Nov 1983). Contract W-31-109-ENG-38.

Neutron spectra as a function of spin and the neutron multiplicity distribution have been measured for the reaction 233-MeV ^{64}Ni+ ^{96}Zr. The emission of two neutrons constitutes the strongest decay channel, in contrast to statistical-model calculations which predict the emission of three neutrons to be the strongest by more than one order of magnitude. This is possibly due to trapping in a superdeformed potential well, similar to that giving rise to fission isomers, as the compound nucleus relaxes from the highly distorted initial shape.

11133 **Decay of ^{143}Ba to levels of odd-odd ^{142}La.** Chung, C.; Walters, W.B.; Brenner, D.S.; Aprahamian, A.; Gill, R.L.; Shmid, M.; Chrien, R.E.; Yuan, L.; Wolf, A.; Berant, Z. (Department of Chemistry, University of Maryland, College Park, Maryland 20742). *Physical Review* [*Section*] *C: Nuclear Physics;* **28**: No. 5, 2099-2114(Nov 1983).

The γ- ar:l β-ray radiation following the decay of ^{142}Ba to ^{142}La were measured in experiments in which β end-point energies, $\beta\gamma$ coincidences, γ-ray singles, $\gamma\gamma t$ coincidence, and $\gamma\gamma t(\theta)$ angular correlation data were collected. The ^{142}Ba activity was produced by on-line mass separation from the ^{238}U(n/sub th/,f) reaction. A level scheme for odd-odd ^{142}La was deduced from coincidence information that includes 90 γ rays which are placed among 23 levels. A 0.87 +- 0.17 μs isomeric state was established at 145 keV. The Q/sub β/ value of 2200 +- 25 keV was determined from β-γ coincidence data. Beta-ray intensities and logft values have been evaluated, and along with internal conversion and angular correlation measurements, yielded spin-parity assignments for a number of levels. The low-lying levels were compared with level schemes projected from $\pi\nu$ multiplet parabolas computed using parameters extracted from parabolic fits in ^{140}La and ^{142}Pr.

6518 Nuclear Properties And Reactions, A=150-189, Theoretical

11134 **Charge exchange (p,n) reactions to the isobaric analog states of high Z nuclei: 73< or =Z< or =92.** Hansen, L.F.; Grimes, S.M.; Poppe, C.H.; Wong, C. (University of California, Lawrence Livermore National Laboratory, Livermore, California 94550). *Physical Review* [*Section*] *C: Nuclear Physics;* **28**: No. 5, 1934-1946(Nov 1983). Contract W-7405-ENG-48.

Differential cross sections have been measured for the (p,n) reaction to the isobaric analog states of ^{181}Ta, ^{197}Au, ^{209}Bi, ^{232}Th, and ^{238}U at an incident energy of 27 MeV. Because of the importance of collective effects in this mass region, coupled-channel calculations have been carried out in the analysis of the data. Optical potentials obtained from the Lane model for the charge exchange reaction have been used in the simultaneous analysis of coupled proton and neutron channels. The sensitivity of the calculations to the different couplings between the levels and to the magnitude of the isovector potentials, V_1 and W_1, is discussed. The good agreement obtained between the measured and calculated (p,n) angular distributions to the analog state confirms the validity of the Lane formalism for high-Z nuclei (Z> or =30). Elastic neutron differential cross sections inferred from the coupled-channel analysis are compared with measurements available in the literature in the energy range 7—8 MeV. The results of these calculations agree with the measured values as well as the results of calculations made using global neutron optical potential parameters optimized to fit neutron data.

11135 **Pion elastic and inelastic scattering from ^{152}Sm.** Morris, C.L.; Seestrom-Morris, S.J.; Seidl, P.A.; Kiziah, R.R.; Greene, S.J. (Los Alamos National Laboratory, Los Alamos, New Mexico 87545). *Physical Review* [*Section*] *C: Nuclear Physics;* **28**: No. 5, 2165-2167(Nov 1983).

Cross sections for pion elastic and inelastic scattering to the ground state and the 0.122 MeV 2^+ state of ^{152}Sm are presented. Coupled channel and distorted-wave impulse approximation analysis of the data indicate that the neutron quadrupole deformation parameter β_2 is nearly equal to the proton quadrupole deformation parameter β_2(p).

11136 **Fission of polonium, osmium, and erbium composite systems.** van der Plicht, J.; Britt, H.C.; Fowler, M.M.; Fraenkel, Z.; Gavron, A.; Wilhelmy, J.B.; Plasil, F.; Awes, T.C.; Young, G.R. (Los Alamos National Laboratory, Los Alamos, New Mexico 87545). *Physical Review* [*Section*] *C: Nuclear Physics;* **28**: No. 5, 2022-2032(Nov 1983).

Fission cross section excitation functions were measured from near threshold to ~10 MeV/nucleon using ^{9}Be, ^{12}C, /sup 16,18/O, /sup 24,26/Mg, ^{32}S, and ^{64}Ni beams. The systems studied included ^{210}Po formed in ^{12}C and ^{18}O induced reactions; ^{186}Os formed in ^{9}Be, ^{12}C, ^{16}O, and ^{26}Mg reactions; and ^{158}Er formed in ^{16}O, ^{24}Mg, ^{32}S, and ^{64}Ni reactions. In addition, the composite systems /sup 204,206,208/Po formed with ^{16}O and ^{18}O projectiles were studied. In the experiment the velocities and emission angles of two coincident fission fragments were measured using position-sensitive p multiwire proportional counter stop detectors and a thin (~200 μg/cm^2) gas "start" detector. The measured fission excitation functions along with previous data from ^{4}He and ^{11}B bombardments for the ^{186}Os and ^{210}Po systems and recent data on the ^{200}Pb system are compared to statistical model calculations using recent angular momentum dependent fission barriers calculated by Sierk. Comparisons of calculated and measured fission excitation functions show good overall agreement between data and theoretical predictions. These comparisons give good agreement for both a wide range of mass of the composite system and for a wide range of mass asymmetry in the entrance channel. It is concluded that the fission barriers of Sierk give a good description of both the mass and angular momentum dependence of fission barriers in this region.

11137 **(CEA-CONF—6721) Complete and incomplete fusion in transition energy range.** Harar, S. (CEA Centre d'Etudes Nucleaires de Saclay, 91 - Gif-sur-Yvette (France)). Apr 1983. 11p. (In French). (CONF-830471—3). NTIS (US Sales Only), PC A02/MF A01. Order Number DE84750302.

From Saturne study meeting; Maine-et-Loire, France (25 Apr 1983).

Portions are illegible in microfiche products.

Some experiments investigating different interaction conditions (complete or incomplete fusion, hot points, deep inelastic collisions) in the transition energy range (20 MeV/A at 200 MeV/A) are exposed.

11138 **Formation and decay of a localized region of high excitation in heavy-ion—induced reactions.** Lynch, W.G.; Chitwood, C.B.; Tsang, M.B.; Fields, D.J.; Klesch, D.R.; Gelbke, C.K.; Young, G.R.; Awes, T.C.; Ferguson, R.L.; Obenshain, F.E. (National Superconducting Cyclotron Laboratory, Michigan State University, East Lansing, Michigan 48824). *Physical Review Letters;* **51**: No. 20, 1850-1853(14 Nov 1983). Contract W-7405-ENG-26.

Proton-proton correlations were measured in ^{16}O-induced reactions on ^{197}Au at 400 MeV. Measurements at both small and large proton relative momenta indicate that a significant fraction of the correlated protons are emitted from a spatially localized region of high excitation.

6520 Nuclear Properties And Reactions, A=220 And Above, Theoretical

11139 (UCID—19973) Reevaluation of ENDL of σ(n,f) and anti nu/sub p/ for ^{235}U and ^{239}Pu from 100 keV to 20 MeV. Howerton, R.J.; White, R.M. (Lawrence Livermore National Lab., CA (USA)). Jan 1984. Contract W-7405-ENG-48. 37p. NTIS, PC A03/MF A01. Order Number DE84005222.

Reevaluations of the neutron-induced fission cross sections from 100 keV to 20 MeV and anti nu/sub p/(E) from 0 to 20 MeV for ^{235}U and ^{239}Pu have been completed and entered into the Livermore Evaluated Nuclear Data Library (ENDL). For ^{235}U(n,f) the recent evaluation of W.P. Poenitz of Argonne National Laboratory has been adopted as the ^{235}U(n,f) ENDL standard. For ^{239}Pu(n,f) the ^{239}Pu/^{235}U fission cross section ratio measurement of Carlson and Behrens of LLNL, which has served as the basis for the ^{239}Pu(n,f) ENDL evaluation to the present, is compared with several new ratio measurements for the new evaluation. For anti nu/sub p/(E) ratio values of Soleihac, et al. were renormalized to the currently accepted value of ^{252}Cf anti nu/sub sf/ and used as the basis for the present ENDL evaluation. Experimental anti nu/sub p/(E) values measured by Gwin, et al. in 1978 from 0.5 keV to 10 MeV are reasonably consistent with the values of Soleihac, et al. Results of criticality calculations using the new evaluated cross sections and anti nu/sub p/(E) are compared for various critical mass assemblies. Also, Monte Carlo calculations using these new evaluations are compared with experimental data from the LLNL 14-MeV pulsed sphere measurements.

11140 (CEA-CONF—6690) El strength function at high spin and excitation energy. Barrette, J. (CEA Centre d'Etudes Nucleaires de Saclay, 91 - Gif-sur-Yvette (France)). Apr 1983. 17p. (CONF-830469—10). NTIS (US Sales Only), PC A02/MF A01. Order Number DE84750303.

From Nuclear physics with heavy ions conference; Stony Brook, NY, USA (14 Apr 1983).

Portions are illegible in microfiche products.

Recently giant dipole resonance-like concentration of the dipole strength function in nuclei was observed at both high excitation energies and high spins. This observation raises the possibility of obtaining new information on the shape of rapidly rotating heated nuclei. Recent experimental results on this subject are reviewed.

11141 (CEA-CONF—6700) Fast fission phenomena. Ngo, C. (CEA Centre d'Etudes Nucleaires de Saclay, 91 - Gif-sur-Yvette (France)). Apr 1983. 12p. (CONF-830444—5). NTIS (US Sales Only), PC A02/MF A01. Order Number DE84750304.

From International school-seminar on heavy ion physics; Alushta, USSR (14 Apr 1983).

Portions are illegible in microfiche products.

We review the conditions under which two heavy ions can fuse together. Then we discuss fast fission mechanism which is an intermediate mechanism between inelastic and compound nucleus reactions.

11142 (ISN—82-42) Bifurcations and chaos of classical trajectories in a deformed nuclear potential. Carbonell, J.; Arvieu, R. (Grenoble-1 Univ., 38 (France). Inst. des Sciences Nucleaires). Oct 1982. 7p. (CONF-821065—4). NTIS (US Sales Only), PC A02/MF A01. Order Number DE84750297.

From Topical meeting on nuclear fluid dynamics ICTP; Trieste, Italy (11 Oct 1982).

Portions are illegible in microfiche products.

The purpose is to describe the general organization of the trajectories of a nucleon in a deformed potential both in phase space and in configuration space. This question gives rise to a very complex problem in a deformed potential. There one is in the frame of the theory of nonintegrable systems. Many very important mathematical theorems (like K.A.M. theorem) are needed as well as any results of bifurcation theory and also of numerical experiments. This work belongs entirely to classical mechanics. The main problems to be treated are: the organization of phase space, the connection with simple known limiting cases and bifurcation theory, and the occurrence of chaotic trajectories in a nuclear field. These problems must be solved as functions of the size, the deformation of the potential and the excitation energy of the particle.

11143 (UCID—19966) Code ALICE B and B: a precompound/evaporation fission code emphasizing neutron yields. Blann, M.; Howe, R. (Lawrence Livermore National Lab., CA (USA)). Nov 1983. Contract W-7405-ENG-48. 29p. NTIS, PC A03/MF A01. Order Number DE84005224.

This report describes a version of the code ALICE/LIVERMORE 82 which has been modified to output neutron yield information of the type one would measure in an experiment gated by measuring a fission fragment. The modified code does the same precompound/compound decay calculations as the code ALICE/LIVERMORE 82, but has additional buffers and algorithms for the neutron yield calculation. We calculate the pre-fission neutron spectra and multiplicities, and post-fission neutron spectra and multiplicities, predicted for measurements which are gated on fission events. In this report we describe the additional output, referring the reader to the more complete report on the original code for further details.

11144 Clark et al. and McNeil et al. respond. Clark, B.C.; Hama, S.; McNeil, J.A.; Mercer, R.L.; Ray, L.; Hoffmann, G.W.; Serot, B.D.; Shepard, J.R.; Wallace, S.J. (Department of Physics, The Ohio State University, Columbus, Ohio 43210). *Physical Review Letters;* **51**: No. 19, 1808-1809(7 Nov 1983).

The differential cross sections and analyzing power are calculated for p+^{40}Ca and p+^{208}Pb elastic scattering with a tensor term included in the relativistic impulse approximation optical potential.(AIP)

11145 Possibility of observing recoilless resonant neutrino absorption. Kells, W.P.; Schiffer, J.P. (Fermi National Accelerator Laboratory, Batavia, Illinois 60510). *Physical Review [Section] C: Nuclear Physics;* **28**: No. 5, 2162-2164(Nov 1983). Contract W-31-109-ENG-38.

Low Q value weak nuclear decays are considered which have two-body final states (electron captures and bound-state beta decays). This opens the possibility for the observation of a process analogous to the Moessbauer effect, where the emitted (anti)neutrinos would be resonantly absorbed by atoms in a suitable absorber. Candidates for such a process are examined. Line widths as small as the narrowest observed in Moessbauer spectroscopy may conceivably allow a new class of ν (disappearance) oscillation experiments.

11146 Neutron scattering from spherical and shape transitional nuclei. Weil, J.L. (University of Kentucky, Lexington, Kentucky 40506). *IEEE (Institute of Electrical and Electronics Engineers) Transactions on Nuclear Science;* **NS-28**: No. 2, 1255-1259(Apr 1981). (CONF-801111—).

From 6. conference on application of accelerators in research and industry; Denton, TX, USA (3 Nov 1980).

In this review various types of information on reaction mechanisms, nuclear structure, and nuclear dynamics that can be deduced from the interaction of neutrons with nuclei are discussed. For the case of spherical nuclei, evidence concerning the neutron-excess dependence of the surface absorption of the optical potential will be presented, as well as some examples of how neutron scattering can be used as a quite sensitive spectroscopic tool. In the latter part of the paper some newly emerging possibilities for determining both the structure and the dynamics of shape transitional and deformed nuclei are discussed.

Nuclear instruments and methods have been applied to solid state physics and technology problems.

11148 (UCID—19972) **Monte-Carlo calculations of forward directed bremsstrahlung produced by 20 and 45 MeV electrons on tungsten.** Goosman, D.R. (Lawrence Livermore National Lab., CA (USA)). 27 Dec 1983. Contract W-7405-ENG-48. 26p. NTIS, PC A03/MF A01. Order Number DE84005223.

The SANDYL Monte-Carlo code has been used to calculate the Bremsstrahlung photon production from beams of parallel electrons incident upon three target geometries. These are 20 MeV electrons onto 1 mm of tungsten + 59 mm of Be, which simulates the operating parameters of the FXR electron accelerator at LLNL Bldg. 801, 45 MeV electrons onto 1 mm of tungsten, and finally 45 MeV electrons onto 1 mm of tungsten and 147 mm of Be. The latter two situations simulate possible future modifications to the FXR accelerator. Graphs of the spectral shape of the Bremsstrahlung photons emitted with angles between 0^0 and 1^0 to the electron direction, the angular distribution of photon-MeV, and the dose reduction curves for each of the three geometries are given. The latter dose reduction curves allow one to calculate forward-directed photon fluxes in real-life situations where the electron beam has non-zero angular divergence.

11149 **Solution of multidimensional inverse transport problems.** Larsen, E.W. (University of California, Los Alamos National Laboratory, Los Alamos, New Mexico 87545). *Journal of Mathematical Physics (New York);* **25**: No. 1, 131-135(Jan 1984).

Formulas are derived for energy-dependent, steady-state, and time-dependent neutron transport problems, relating the surface neutron fluxes for a convex, homogeneous, three-dimensional region to the neutron scattering laws that apply within the region. In principle, these formulas can be used to deduce information about the scattering laws.

11150 **Positronium formation and diffusion in a molecular solid studied with variable-energy positrons.** Eldrup, M.; Vehanen, A.; Schultz, P.J.; Lynn, K.G. (Brookhaven National Laboratory, Upton, New York 11973). *Physical Review Letters;* **51**: No. 21, 2007-2010(21 Nov 1983). Contract AC02-76CH00016.

Crystalline and amorphous ice were studied with monoenergetic positrons with incident energies $0<E<5$ keV. Positronium (Ps) forms in the ice and diffuses as a neutral particle until annihilation or escape from the surface. Measurement of the fraction of o-Ps leaving the surface reveals two distinct contributions to the total Ps-formation probability (both Ore- and spur-type) as well as the Ps diffusion coefficient, 0.17 +- 0.09 cm^2/sec in crystalline ice. In addition, positronium trapping is observed in sputtered (crystalline) ice and voids (> or $\approx$17 A diameter) in amorphous ice.

11151 **Environmental influences on K x-rays from highly stripped sulfur ions traveling in solids.** Watson, R.L.; Kenefick, R.A.; Langenberg, A.; White, J.R. (Cyclotron Institute, Texas A & M University, College Station, Texas 77843). *IEEE (Institute of Electrical and Electronics Engineers) Transactions on Nuclear Science;* **NS-28**: No. 2, 1036-1038(Apr 1981). (CONF-801111—). Contract AS05-78ER06036.

From 6. conference on application of accelerators in research and industry; Denton, TX, USA (3 Nov 1980).

As a fast heavy-ion passes through a material medium, it undergoes multiple collisions in which electrons are continously lost and recaptured by the ion, and as a result, an equilibrium distribution of excited states is quickly established. The high density of electrons in a solid state environment enables these collisional excitation and decay processes to compete with x-ray and Auger decay. As a result, the widths of the x-ray lines exhibit a dependence on electron density due to collisional broadening. In addition, the potential of the ion is modified by the polarization of loosely bound electrons of the medium. In effect, these electrons act to screen the ion potential, thereby causing the core electron binding energies of the ion to decrease. As a result of this "dynamic screening" effect, the x-ray transition energies inside the medium differ from those in vacuum.

11152 **Characteristics and applications of channeling radiation from relativistic electrons and positrons.** Pantell, R.H.; Alguard, M.J.; Berman, B.L.; Bloom, S.D.; Datz, S.; Swent, R.L. (Stanford University, CA 94305). *IEEE (Institute of Electrical and Electronics Engineers) Transactions on Nuclear Science;* **NS-28**: No. 2, 1152-1155(Apr 1981). (CONF-801111—). Contract AM03-76SF00326.

From 6. conference on application of accelerators in research and industry; Denton, TX, USA (3 Nov 1980).

Relativistic electrons and positrons channeled in crystals radiate electromagnetic waves in relatively narrow spectral bands. The radiation is forward directed, linearly polarized, and occurs in picosecond bursts. Photons in the 20 to 130 keV range are emitted by 50 MeV particles, and the emission spectrum varies with the incident particle energy. Several applications of channeling radiation are considered: to study the properties of crystals in which channeling occurs, to investigate aspects of the channeling phenomenon, and as a source of x-rays.

NTIS (US Sales Only), PC A03/MF A01. Order Number DE83900297.

From 67. national conference of the Italian Society of Physics; Pisa, Italy (3 Oct 1981).

The optimization techniques in radiation protection are briefly revised and discussed.

11154 (CONF-821215—, pp 291-300) **Standards for concentrations of radionuclides in soil: basis and implementation.** Brown, R.C.; Kephart, G.S. (Rockwell Hanford Operations, Richland, WA). Aug 1983. NTIS, PC A24/MF A01.

From 4. DOE environmental protection information meeting; Denver, CO, USA (7 Dec 1982).

Levels of acceptable concentrations for specified radionuclides in surface soil for release from a surface contamination status (soil standards) are in use by Rockwell Hanford Operations. They were developed for use in the two areas where the fuel and waste processing and waste management activities are located; these areas are referred to as the 200 Areas. (The soil standards, expressed as average activity per unit mass, are based on criteria to limit the total dose equivalent to acceptable levels.) The soil standards provide assurance that no one will receive more than 500 mR per year (continuous occupancy) from external gamma radiation and that uptake of radionuclides by ingestion of soil particulates, and drinking of surface contaminated water will be less than acceptable standards. These soil standards assume (1) US Department of Energy control of the areas and (2) that no food or forage crop production or grazing will be permitted. Implementation of the appropriate standards suggests a two tiered investigation approach. Three general categories of spatial contamination distribution are possible. An implementation guide has been proposed which would first identify which spatial distribution best characterizes the contamination of a given site. The spatial distribution of the first tier would then form the basis for statistical sampling/survey design

and compliance testing (the second tier). 10 references, 2 figures, 2 tables.

11155 **(IPNO—83-01) Neutron dose equivalent rates due to heavy ion beams.** Clapier, F.; Zaidins, C.S. (Paris-11 Univ., 91 - Orsay (France). Inst. de Physique Nucleaire). 1983. 19p. NTIS (US Sales Only), PC A02/MF A01. Order Number DE84750298.

We have used the existing neutron dose measurements from the bombardement of thick targets by heavy ion beams to study the relationship between the dose rate and the incident energy variable W, measured in units of MeV/nucleon. We find that the yield can be fit by a power law curve in term of W. The magnitude of the yield and the exponent in the power law depend upon the Z of the projectile. We offer a hypothesis for this behavior. This study has led to an empirical parametrization which permits one to predict the dose rate for a wide range of energies and ion types as a function of the distance from the target, and the angle relative to the beam axis.

11156 **(JINR—16-82-89) Analytic expression for some dosimetric characteristics of neutrons and protons.** Alejnikov, V.E.; Beskrovnaya, L.G. (Joint Inst. for Nuclear Research, Dubna (USSR). Dept. of Radiation Safety). 1982. 6p. (In Russian). NTIS (US Sales Only), PC A02/MF A01. Order Number DE83704129.

Specific dose equivalents and admissible neutron and proton flux density available from national radiation safety guides (NRB-76), are approximated by the simplest formula. The approximation was performed in the energy range from thermal up to 10^6 MeV for neutrons and from 2 MeV up to 10^6 MeV for protons. The calculation results agree well with data presented in NRB-76.

11157 **Negative pion capture in biological material.** O'Leary, K. Guildford, England; Surrey University (1982). 163p. Available from British Library, Boston Spa, Wetherby, West Yorks. No. D44810/83.

A project was undertaken to measure the relative numbers of negative pions captured onto carbon, nitrogen and oxygen in a number of mostly organic compounds. The results have been used to investigate the validity of the Fermi Teller law. Dosimetry calculations, currently being used to plan pion radiotherapy treatment, are based on the predictions of this law. Results from this experiment show it to be incorrect for organic molecules. The results have also been used to guide the development of a previously existing molecular model of pion capture. A cascade calculation has been undertaken in order to gain further insight into the pionic capture and cascade processes and to determine whether or not certain processes, neglected for the purposes of the capture ratio calculation, were truly negligible.

11158 **A thermoluminescence dosimetry system for use in a survey of high-energy Bremsstrahlung dosimetry.** Soares, C.G.; Ehrlich, M. (National Bureau of Standards, Washington, DC). *IEEE (Institute of Electrical and Electronics Engineers) Transactions on Nuclear Science;* **NS-28**: No. 2, 1614-1620(Apr 1981). (CONF-801111—).

From 6. conference on application of accelerators in research and industry; Denton, TX, USA (3 Nov 1980).

A thermoluminescence dosimetry system suited for a survey of high-energy Bremsstrahlung in U. S. radiation-therapy departments has been selected and calibrated. The experiments leading to the choice of the recommended operational characteristics, including dosimeter handling, annealing and readout, dosimeter stability in the contemplated mode of operation, dosimeter response over the photon-energy range to be covered, irradiation geometry and irradiation level are treated in detail. Results are reported of a pilot study involving the shipment of a typical survey assembly (a plastic phantom loaded with a set of dosimeters) for irradiation in one U. S. therapy department and the overall uncertainty of the proposed survey procedure is discussed.

11159 **(CEA-CONF—6795) Broken symmetry in the mean field theory of the ising spin glass: replica way and no replica way.** De Dominicis, C. (CEA Centre d'Etudes Nucleaires de Saclay, 91 - Gif-sur-Yvette (France)). Jun 1983. 23p. (CONF-8305153—1). NTIS (US Sales Only), PC A02/MF A01. Order Number DE84750268.

From Colloquium on spin glasses; Heidelberg, F.R. Germany (30 May 1983).

We review the type of symmetry breaking involved in the solution discovered by Parisi and in the static derivation of the solution first introduced via dynamics by Sompolinsky. We turn to a formulation of the problem due to Thouless, Anderson and Palmer (TAP) that put a set of equations for the magnetization. A probability law for the magnetization is then built. We consider two cases: (i) a canonical distribution which is shown to give indentical results to the Hamiltonian formulation under a weak and physical assumption and (ii) a white distribution characterized by two matrices and a response. We show what symmetry breaking is necessary to recover Sompolinsky free energy. In section III we supplement replica indices in the Hamiltonian approach by "time" indices ans show in particular that the analytic continuation involved in Sompolinsky's equilibrium derivation, is trying to mimick a translational symmetry breaking in "time" that incorporates Sompolinsky's ansatz of a long time scale sequence. In section IV we apply the same treatment to the white average approach and show that, replicas can be altogether discorded and replaced by "time". Finally, we briefly discuss the attribution of distinct answers for the standard spin glass order parameter depending on the physical situation: equilibrium or non equilibrium associated with canonical or white (non canonical) initial conditions and density matrices.

11160 (INIS-SU—186, pp 25-26) **Characteristic properties of kinetic phenomena in semiconductors with damage regions.** Shpinar, L.I.; Yaskovets, I.I. (AN Ukrainskoj SSR, Kiev. Inst. Fiziki). 1982. (In Russian). NTIS (US Sales Only), PC A06/MF A01.

In Radiation damage physics and radiation technology.

Expressions for Hall and Nernst constants are derived for semiconductors containing damage regions created by irradiation with high energy particles. The Hall factor is shown to be determined both by the carrier scattering mechanism and by the degree of the crystal damage. The increase of the damage region concentration leads to the change of the sign of the Nernst constant even when the scattering mechanism is essentially the same. For a strong magnetic field, the Nernst constant is independent of it (in contrast to the case of homogeneous semiconductors) and is determined by the degree of material damage.

11161 **(LBL—16551) Elastic theory of the defect solid solution.** Morris, J.W. Jr.; Khatchaturyan, A.G.; Wen, S.H. (Lawrence Berkeley Lab., CA (USA); AN SSSR, Moscow. Inst. Kristallografii; IBM Research Div., Yorktown Heights, NY (USA)). Jun 1983. Contract AC03-76SF00098. 31p. (CONF-8306163—1). NTIS, PC A03/MF A01. Order Number DE84001976.

From NATO advanced study institute on modulated structure materials; Crete, Greece (15 Jun 1983).

This paper reviews the linear elastic theory of the defect solid solution. It is tutorial in nature, and is primarily intended to outline the development of the theory into the mathematical form that is most suitable for the solution of practical problems. The theory treats solid solutions containing distributions of solute defects that distort the solvent lattice and interact elastically with one another. It determines the total strain of the solvent lattice and the elastic contribution to the free energy of the solution in the strong harmonic approximation. The theory is specifically developed for a binary solution of point defects in the absence of external stress. It can be extended to treat multicomponent solutions, stressed solutions, and solutions of finite defects or macroscopic inclusions; the equations governing these complex systems are also presented. The

model is finally used to consider ordering and decomposition reactions in solutions whose components interact elastically.

11162 **Dynamics of interfacial pattern formation.** Ben-Jacob, E.; Goldenfeld, N.; Langer, J.S.; Schoen, G. (Institute for Theoretical Physics, University of California, Santa Barbara, California 93106). *Physical Review Letters;* **51**: No. 21, 1930-1932(21 Nov 1983). Contract AM03-76SF00034.

A phenomenological model of dendritic solidification incorporating interfacial kinetics, crystalline anisotropy, and a local approximation for the dynamics of the thermal diffusion field is proposed. The preliminary results are in qualitative agreement with natural dendritelike pattern formation.

11163 **Electron delocalization by a magnetic field in two dimensions.** Levine, H.; Libby, S.B.; Pruisken, A.M.M. (Schlumberger-Doll Research, Ridgefield, Connecticut 06877). *Physical Review Letters;* **51**: No. 20, 1915-1918(14 Nov 1983).

The problem of two-dimensional localization in the presence of a magnetic field is reconsidered. The existence of extended electronic states is demonstrated by use of the replica formalism and duality arguments. These states are analogs of $\theta = \pi$ vacua in four-dimensional Yang-Mills theories, and occur at the center of each Landau band. The present results complete the explanation of the integrally quantized Hall effect.

11164 **(EFI—574(61)-82) Diagram summation method by means of legendre transformation by a scalar parameter and its application to an anharmonic oscillator.** Ananikyan, N.S.; Balayan, G.L.; Savvidy, G.K. (Erevanskij Fizicheskij Inst. (USSR)). 1982. 17p. NTIS (US Sales Only), PC A02/MF A01. Order Number DE83704430.

The summation of an infinite number of diagrams is carried out. The case of the dimension d=1 (anharmonic oscillator) is discussed. The obtained expressions for the ground-state energy are in a satisfactory agreement with the exact results. It is shown that the proposed summation method allows to enlarge by an order the application region as compared to a standard perturbation theory.

11165 **(IC—81/64) Generalized virial relations and the theory of subdynamics.** Obcemea, Ch.; Froelich, P.; Braandas, E.J. (International Centre for Theoretical Physics, Trieste (Italy)). May 1981. 17p. NTIS (US Sales Only), PC A02/MF A01. Order Number DE83704432.

In this paper, we discuss the implication of the generalized virial relations in the spectral analysis of Liouville operators. In particular, we refer to the existence problem of the analytic continuation of these super-operators and their resolvents occurring in the reduced dynamics description of open systems. For completeness, we outline the main ideas of the subdynamics approach.

11166 **(IC—82/221) Value preserving quantum measurements: impossibility theorems and lower bounds for the distortion.** Ghirardi, G.C.; Rimini, A.; Weber, T. (International Centre for Theoretical Physics, Trieste (Italy)). Nov 1982. 30p. NTIS (US Sales Only), PC A03/MF A01. Order Number DE83704439.

Extending previous works on the subject, we consider the problem of the limitations to ideal quantum measurements arising from the presence of additive conservation laws. We derive impossibility theorems and lower bounds for the deviations from the ideal schemes, with particular reference to the distorting case.

11167 **(IC—82/228) Symmetry in Kaluza-Klein theory.** Strathdee, J. (International Centre for Theoretical Physics, Trieste (Italy)). Dec 1982. 16p. NTIS (US Sales Only), PC A02/MF A01. Order Number DE83704441.

A method is described for making harmonic expansions on the internal space of a Kaluza-Klein vacuum in cases where this space is a coset space. This method fully exploits the symmetry of the space and should be useful for the analysis of excitation spectra and, in particular, for constructing the correct zero-mode ansatz in cases where the multi-dimensional gravitational fields are coupled to matter fields of various kinds.

11174 **(JINR—E-2-82-779) Proper time, spatial distances and clock synchronization in the locally anisotropic space-time.** Bogoslovskij, G.Yu. (Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of Theoretical Physics). 1982. 4p. NTIS (US Sales Only), PC A02/MF A01. Order Number DE83704450.

The relations between the Finsler metric of four-dimensional spacetime and the metric of three-dimensional space is obtained and the simultaneity of events and the algorithm for synchronizing clocks are determined. The method for deriving the expressions of the observable quantities and synchronizing clocks is based on light-signal exchange and is a consequence of the specific Finsler structure of space-time which gives the same equation of light-signal propagation as the general relativity. Within the framework of the general relativistic theory of the locally anisotropic space-time and gravitation, expressions have been obtained for the observable values; the proper time, the spatial distance, and the proper time interval between events at the neighbouring reference points. The specific form of the metric of locally anisotropic space-time used in the work has yielded reasonable expressions of the observable quantities through the values of the fields determining the local anisotropy.

11175 **(LA-UR—83-2295) Family of almost periodic Schroedinger operators.** Baker, G.A. Jr.; Bessis, D.; Moussa, P. (Los Alamos National Lab., NM (USA); CEA Centre d'Etudes Nucleaires de Saclay, 91 - Gif-sur-Yvette (France). Service de Physique Theorique). 1983. Contract W-7405-ENG-36. 27p. (CONF-8308153—1). NTIS, PC A03/MF A01. Order Number DE83017308.

From 7. international conference on mathemitical physics; Boulder, CO, USA (1 Aug 1983).

Bellisard et al., introduced a one-dimensional, almost-periodic, discrete Schroedinger operator which is defined by a parameter λ. We allow this parameter to become complex and develop a geometric formalism to control the operator. The support of the spectrum of this operator is the Julia set of the mapping $x^2 - \lambda \rightarrow x$. We prove that the almost-periodicity holds over wide regions of the complex λ-plane, even though Hermiticity fails. 14 references.

11176 **(TRITA-EPP—82-06) Numerical double layer solutions with ionization.** Andersson, D.; Soerensen, J. (Royal Inst. of Tech., Stockholm (Sweden). Dept. of Plasma Physics). Aug 1982. 28p. NTIS (US Sales Only), PC A03/MF A01. Order Number DE83704459.

Maxwell's equation div D = ro in one dimension is solved numerically, taking ionization into account. Time independent anode sheath and double layer solutions are obtained. By varying voltage, neutral gas pressure, temperature of the trapped ions on the cathode side and density and temperature of the trapped electrons on the anode side, diagrams are constructed that show permissible combinations of these parameters. Results from a recent experiment form a subset. Distribution functions, the Langmuir condition, some scaling laws and a possible application to the lower ionosphere are discussed.

11177 **Quantum manifestations of classical resonance zones.** De Leon, N.; Davis, M.J.; Heller, E.J. (Los Alamos National Laboratory, University of California, Los Alamos, New Mexico 87545). *Journal of Chemical Physics;* **80**: No. 2, 794-799(15 Jan 1984).

We examine the concept of nodal breakup of wave functions as a criterion for quantum mechanical ergodicity. We find that complex nodal structure of wave functions is not sufficient to determine quantum mechanical ergodicity. The influence of classical resonances [which manifest themselves as classical resonance zones (CRZ)] may also be responsible for the seeming complexity of nodal structure. We quantify this by reexamining one of the two systems studied by Stratt, Handy, and Miller [J. Chem. Phys. 71, 3311 (1974)] from both a quantum mechanical and classical point of view. We conclude that quasiperiodic classical motion can account for highly distorted quantum eigenstates. One should always keep this in mind when addressing questions regarding quantum mechanical ergodicity.

11178 **Phase averaging of image ensembles by using cepstral gradients.** Swan, H.W. (Information Systems Laboratory, Stanford University, Stanford, California 94305). *Journal of the Optical Society of America;* **73**: No. 11, 1488-1492(Nov 1983).

The direct Fourier phase averaging of an ensemble of randomly blurred images has long been thought to be too difficult a problem to undertake realistically owing to the necessity of proper phase unwrapping. It is shown that it is nevertheless possible to average the Fourier phase information in an image ensemble without calculating phases by using the technique of cepstral gradients.

11179 **Bayesian approach to limited-angle reconstruction in computed tomography.** Hanson, K.M.; Wecksung, G.W. (Los Alamos National Laboratory, Los Alamos, New Mexico 87545). *Journal of the Optical Society of America;* **73**: No. 11, 1501-1509(Nov 1983). Contract W-7405-ENG-36.

An arbitrary source function cannot be determined fully from projection data that are limited in number and range of viewing angle. There exists a null subspace in the Hilbert space of possible source functions about which the available projection measurements provide no information. The null-space compJonents of deterministic solutions are usually zero, giving rise to unavoidalbe artifacts. It is demonstrated that these artifacts may be reduced by a Bayesian maximum a posteriori (MAP) reconstruction method that permits the use of significant a priori information. Since normal distributions are assumed for the a priori and measurement-error probability densities, the MAP reconstruction method presented here is equivalent ot the minimum-variance linear estimator with nonstationary mean and covariance ensemble characterizations. A more comprehensive Bayesian approach is suggested in which the ensemble mean and covariance specifications are adjusted on the basis of the measurements.

11180 **Early years of relativity.** Dirac, P.A.M. pp 79-90 of Albert Einstein: historical and cultural perspectives. Centennial symposium in Jerusalem. Holton, G.; Elkana, Y. (eds.). Princeton, NJ; Princeton University Press (1982).

The author describes how he was affected by the theory of relativity when it was first presented to the public. He was a student of engineering at Bristol University in England at the time. He also describes the impact on the general public. He discusses the introduction of quantum mechanics in 1925 and the subsequent discussion between Bohr and Einstein. The incompleteness of Einstein's theory of gravitation and the unification of the gravitational field and electromagnetic field are also addressed. (SC)

11181 **(LA-UR—83-3545) Semigroup associated with a quasi-linear system in which the coupling is linear.** Pimbley, G.H. (Los Alamos National Lab., NM (USA)). 1983. Contract W-7405-ENG-36. 19p. (CONF-8307111—1). NTIS, PC A02/MF A01. Order Number DE84004227.

From American Mathematical Society summer workshop; Berkeley, CA, USA (11 Jul 1983).

Until now, semigroup solution has been successful mainly for linear and mildly nonlinear initial value problems having but a single partial differential equation (PDE). Attempts to apply standard semigroup generation principles to systems of nonlinear PDEs have encountered difficulties, though papers have appeared that treat mildly nonlinear systems. The purpose of this work is to demonstrate ideas, involving the Trotter product formula, that may be efficacious in finding semigroups for coupled systems of quasi-linear PDEs. This is a class for which semigroup generation principles involving accretiveness of an operator have generally failed. These Trotter product ideas were originally explained by J. Marsden, using a profound Banach manifold approach. 5 references.

11182 **(AD-A—130808/9) Polarization studies in electron cyclotron heating experiments on the Versator II tokamak. Final report 25 Aug 1980 - 25 Aug 1981.** (JAYCOR, Alexandria, VA (USA)). 30 Jul 1982. 24p. NTIS, PC A02/MF A01.

Preliminary results of the ECH experiment using the MIT Versator II with polarized microwave radiation were obtained. Decreases in both loop voltage and line average plasma density were measured as a function of power and toroidal angle of microwave beam injection. Thompson scattering measurements indicate an increase in the central electron temperature. These investigations showed a distinct asymmetry behavior for both polarizations.

11183 **(CONF-820944—10) Diagnostic protection techniques in steady state, high power RF and microwave.** Glowienka, J.C. (Oak Ridge National Lab., TN (USA)). 1982. Contract W-7405-ENG-26. 19p. NTIS, PC A02/MF A01. Order Number DE84004450.

From Workshop on diagnostics for fusion reactor conditions (International school of plasma physics); Varenna, Italy (6 Sep 1982).

The use of high power RF and microwave heating in the range of 10's of MHz through 10's of GHz in the next generation devices will require that diagnostics be hardened and isolated from the plasma and heating environment. Diagnostics used on the ELMO Bumpy Torus (EBT) have been faced with such a hostile environment, in steady state, and solutions have evolved to make diagnostic measurements possible.

11184 (CONF-821103—96-Draft.) Monte Carlo methods for optimizing torsatron configurations. Rome, J.R.; Fowler, R.H.; Lyon, J.F.; Hirshman, S.P. (Oak Ridge National Lab., TN (USA)). 1982. Contract W-7405-ENG-26. 5p. NTIS, PC A02/MF A01. Order Number DE84004459.

From American Nuclear Society winter meeting; Washington, DC, USA (14 Nov 1982).

Portions are illegible in microfiche products.

It is desirable to optimize torsatron configurations to provide minimum transport losses. Neoclassical calculations of transport coefficients for torsatron configurations have been performed for simplified fields or under the assumption of conservation of the longitudinal adiabatic invarient, J. However, Fourier analysis of torsatron fields for real coil configurations shows that in general, about ten harmonics are required to represent the field. Furthermore, guiding center orbits computed in these fields do not conserve J. In fact, in present day torsatrons collisionless orbits may traverse the entire radial extent of the plasma. When collisions are included, it is therefore doubtful that the transport problem can be treated locally. When particles on these large orbits are lost from the plasma, a significant radial electric field is created which must be included in the analysis.

11185 (CONF-831203—69) End cell I & C requirements for operating tandem mirror reactors. Gorker, G.E.; Osher, J.E. (Oak Ridge National Lab., TN (USA); Lawrence Livermore National Lab., CA (USA)). 1983. Contract W-7405-ENG-26. 6p. NTIS, PC A02/MF A01. Order Number DE84004568.

From 10. symposium on fusion engineering; Philadelphia, PA, USA (5 Dec 1983).

The next generation of fusion reactors will be developed to achieve near-ignition conditions and operate in a tritium environment for significant periods of time. Radiation-hardened diagnostic instrumentation must be developed for these reactors. Although neutral beam injection (NBI) will be used for plasma heating and fueling of experimental fusion machines like MFTF-α + T, it is believed that ion cyclotron resonance heating (ICRH) will be used in future machines for heating the plasma. When rf heating is used, fueling will be accomplished with gas puffing and advanced fuel injectors. End cell coils, NBI, and microwave power injectors are needed to provide adequate confinement. Microwave power and NBI control the electostatic potentials of the plug and barrier. Low-frequency rf power provides drift pump control of the ions so that they are lost radially, enhancing the use of direct converters that collect the axially flowing electrons. Direct or indirect measurements of electrostatic potential barriers, electron density, and temperature appear necessary to control the NBI and microwave power generators. This paper discusses some of the end cell instrumentation and control (I & C) systems believed to be necessary for tandem mirror reactors.

11186 (DOE/ER/53122—2) Plasma magnetic field measurement by intracavity absorption. Progress report, June 1, 1983-May 31, 1984. Brink, G.O. (State Univ. of New York, Buffalo (USA)). Jan 1984. Contract AC02-81ER53122. 22p. NTIS, PC A02/MF A01. Order Number DE84005152.

Portions are illegible in microfiche products.

Dye laser intracavity absorption (ICA) is being studied as a potential diagnostic for plasma or neutral beam systems. For magnetic field measurements it is necessary to make Zeeman effect measurements on the resonance transition of atomic lithium on a millisecond time scale. To do this it is necessary to sweep the dye laser in wavelength at a rapid rate so that the absorber can be sampled many times during the measurement. Our results indicate that the ICA signal becomes small at high sweep rates limiting the rate at which such sweeping may be carried out. It may be possible to avoid this limitation by chopping the pump laser. The studies of coupled cavity ICA are continuing, and are discussed in detail in an appendix. An ICA system using a dye cell has been designed, and supplementary experiments involving the observation of ICA in a ring dye laser are discussed.

11187 (DOE/NBM—3017242) MHD activity in the ISX-B tokamak: experimental results and theoretical interpretation. Carreras, B.A.; Dunlap, J.L.; Bell, J.D.; Charlton, L.A.; Cooper, W.A.; Dory, R.A.; Hender, T.C.; Hicks, H.R.; Holmes, J.A.; Lynch, V.E. (Oak Ridge National Lab., TN (USA); Texas Univ., Austin (USA). Inst. for Fusion Studies). 1982. Contract W-7405-ENG-26. 63p. NTIS, PC A04/MF A01. Order Number DE83017242.

The observed spectrum of MHD fluctuations in the ISX-B tokamak is clearly dominated by the $n=1$ mode when the $q=1$ surface is in the plasma. This fact agrees well with theoretical predictions based on 3-D resistive MHD calculations. They show that the $(m=1; n=1)$ mode is then the dominant instability. It drives other $n=1$ modes through toroidal coupling and $n>1$ modes through nonlinear couplings. These theoretically predicted mode structures have been compared in detail with the experimentally measured wave forms (using arrays of soft x-ray detectors). The agreement is excellent. More detailed comparisons between theory and experiment have required careful reconstructions of the ISX-B equilibria. The equilibria so constructed have permitted a precise evaluation of the ideal MHD stability properties of ISX-B. The present results indicate that the high β ISX-B equilibria are marginally stable to finite eta ideal MHD modes. The resistive MHD calculations also show that at finite β there are unstable resistive pressure driven modes.

11188 (EGG-M—10483) Vaporized wall material/plasma interaction during plasma disruption. Merrill, B.J.; Jardin, S.C.; Carroll, M.C. (EG and G Idaho, Inc., Idaho Falls (USA); Princeton Univ., NJ (USA). Plasma Physics Lab.; Illinois Univ., Urbana (USA)). 1983. Contract AC07-76ID01570. 7p. (CONF-831203—83). NTIS, PC A02/MF A01. Order Number DE84004541.

From 10. symposium on fusion engineering; Philadelphia, PA, USA (5 Dec 1983).

Portions are illegible in microfiche products.

The purpose of this paper is to discuss a new plasma disruption model that has been developed for analyzing the consequences to the limiter/first wall structures. This model accounts for: nonequilibrium surface vaporization for the ablating structure, nonequilibrium ionization of and radiation emitted from the ablated material in the plasma, plasma particle and energy transport, and plasma electromagnetic field evolution during the disruption event. Calculations were performed for a 5 ms disruption on a stainless steel flat limiter as part of a d-shaped first wall. These results indicated that the effectiveness of the ablated wall material to shield the exposed structure is greater than predicted by earlier models, and that the rate of redeposition of the ablated wall material ions is very dramatic. Impurity transport along magnetic field lines, global plasma motion, and radiation transport in an optically thick plasma are important factors that require additional modeling. Experimental measurements are needed to verifty these models.

11189 (EUR-CEA-FC—1183) Study of the relevance of simple solutions to nonlinear rate equations with time-varying coefficients. Wilhelmsson, H.; Jancel, R. (Association Euratom-CEA, Centre d'Etudes Nucleaires de Fontenay-aux-Roses, 92 (France). Dept. de Recherches sur la Fusion Controlee). May 1983. 15p. NTIS (US Sales Only), PC A02/MF A01. Order Number DE84750334.

The possibility of accounting for time-dependent coefficients in a nonlinear rate equation, including a source term, is studied in circular cylindrical geometry. It is shown that the equation can be transformed to a form which allows for a simple particular solution, provided a certain combination of the time-dependent coefficients is a constant, or nearly a constant. The relevance of the solutions for describing the evolution of a plasma in the ionization phase is considered.

11190 **(EUR-CEA-FC—1188) Simulation and interpretation codes for the JET ECE diagnostic. Part 2. Numerical details.** Bartlet, D.V. (Association Euratom-CEA, Centre d'Etudes Nucleaires de Fontenay-aux-Roses, 92 (France). Dept. de Recherches sur la Fusion Controlee). Jun 1983. 65p. NTIS (US Sales Only), PC A04/MF A01. Order Number DE84750337.

Portions are illegible in microfiche products.

The second part describes the organization of the codes developed for the analysis of electron emission measurements in JET, the numerical details of the operation of the codes written at CEA-Fontenay and gives information about the required input data (fort the first part see: EUR-CEA-FC-1187).

11191 **(EUR-CEA-FC—1190) Measurement of electron cyclotron emission on the T.F.R. Tokamak. Application to the study of disruptions.** Laurent, L. (Association Euratom-CEA, Centre d'Etudes Nucleaires de Fontenay-aux-Roses, 92 (France). Dept. de Recherches sur la Fusion Controlee; Paris-11 Univ., 91 - Orsay (France)). Jun 1983. 284p. (In French). NTIS (US Sales Only), PC A13/MF A01. Order Number DE84750335.

Portions are illegible in microfiche products.

Measurement of the electron cyclotron radiation from the hot plasma confined by the magnetic field of the T.F.R. tokamak are presented. This emission, in the millimetre wavelength range, has been investigated with a set of two Fabry-Perot interferometers. In part of the spectrum, the plasma radiates as a blackbody. This characteristic has been exploited to measure routinely the electron temperature. New results have been obtained, in particular concerning the study of disruptions. The possibility of measuring the plasma density from the electron cyclotron emission in the part of the spectrum where the plasma is not opaque has been investigated.

From 10. symposium on fusion engineering; Philadelphia, PA, USA (5 Dec 1983).

Portions are illegible in microfiche products.

We find that sensors exploiting the Faraday effect in single-mode optical fibers are practical means of measuring large currents in the MFE environment. Work still needs to be done to overcome the effects of linear birefringence. We have seen distortion caused by dynamic stress-induced birefringence and shown the importance of physically eliminating it because of the difficulty of treating it analytically.

11230 **(PPPL—2046) Measurements of the hydrogenic recombination coefficient for the TFTR vacuum vessel.** Dylla, H.F.; Cecchi, J.L.; Knize, R.J. (Princeton Univ., NJ (USA). Plasma Physics Lab.). Dec 1983. Contract AC02-76CH03073. 22p. (CONF-830795—7). NTIS, PC A02/MF A01. Order Number DE84004296.

From Symposium on energy removal and particle control and toroidal fusion devices; Princeton, NJ, USA (26 Jul 1983).

Characteristic values of the recombination rate coefficient for hydrogen and deuterium in stainless steel have been measured for the inner wall of the TFTR vacuum vessel for vessel temperatures of 25 to 100 C. In situ measurements of k/sub r/ are important for predicting the hydrogen isotope retention in the wall as a function of time, temperature, and discharge exposure, particularly because existing laboratory measurements of k/sub r/ for stainless steel span a range of four orders of magnitude. The measurement technique involved the observation of the decrease in hydrogen pressure during a glow discharge in the TFTR vacuum vessel with an initial static gas fill. The resulting values of k/sub r/ at 25 C are in the range of (0.4 to 4) x 10^{-27} cm^4-s^{-1} assuming a value of the hydrogenic diffusivity of 2 x 10^{-12} cm^2-s^{-1} at room temperature. No significant isotopic dependence was observed and the temperature dependence of k/sub r/ is consistent with the literature value (0.5 eV) of the activation energy. The implications of this range of values of k/sub r/, for the estimation of the in-vessel tritium inventory following D-T operation in TFTR are discussed.

11231 **(PPPL—2052) Parametric excitation of ion Bernstein waves by a fast wave antenna in the ion cyclotron frequency range.** Skiff, F.; Ono, M.; Wong, K.L. (Princeton Univ., NJ (USA). Plasma Physics Lab.). Nov 1983. Contract AC02-76CH03073. 16p. NTIS, PC A02/MF A01. Order Number DE84004301.

Parametric excitation of ion Bernstein waves is observed with an ICRF fast wave induction loop antenna in the ion cyclotron frequency range (ω/sub o/ ~ 2Ω/sub i/ - 4Ω/sub i/). Important features of the decay process are investigated and discussed.

11232 **(PPPL—2055) Preliminary semiempirical transport models.** Singer, C.E. (Princeton Univ., NJ (USA). Plasma Physics Lab.). Nov 1983. Contract AC02-76CH03073. 42p. (CONF-830247—1). NTIS, PC A03/MF A01. Order Number DE84003484.

From Workshop on transport analysis codes for tokamaks with strong auxiliary heating; Princeton, NJ, USA (28 Feb 1983).

A class of semiempirical transport models is proposed for testing against confinement data from tokamaks and for use in operations planning and machine design. A reference model is proposed to be compatible with published confinement data. Theoretical considerations are used to express the anomalous transport coefficients in terms of appropriate dimensionless parameters.

11233 **(PPPL—2056) Attainment of high confinement in neutral beam heated divertor discharges in the PDX tokamak.** Kaye, S.M.; Bell, M.; Bol, K.; Boyd, D.; Brau, K.; Buchenauer, D.; Budny, R.; Cavallo, A.; Couture, P.; Crowley, T. (Princeton Univ., NJ (USA). Plasma Physics Lab.). Nov 1983. Contract AC02-76CH03073. 35p. NTIS, PC A03/MF A01. Order Number DE84004306.

The PDX divertor configuration has recently been converted from an open to a closed geometry to inhibit the return of neutral gas from the divertor region to the main chamber. Since then, operation in a regime with high energy confinement in neutral beam heated discharges (ASDEX H-mode) has been routine over a wide range of operating conditions. These H-mode discharges are characterized by a sudden drop in divertor density and H/sub α/ emission and a spontaneous rise in main chamber plasma density during neutral beam injection. The confinement time is found to scale nearly linearly with plasma current, but it can be degraded due to either the presence of edge instabilities or heavy gas puffing. Detailed Thomson scattering temperature profiles show high values of Te near the plasma edge (~ 450 eV) with sharp radial gradients (~ 400 eV/cm) near the separatrix. Density profiles are broad and also exhibit steep gradients close to the separatrix.

11234 **(PPPL—2064) Stability of n = 1 internal modes in tokamaks.** Manickam, J. (Princeton Univ., NJ (USA). Plasma Physics Lab.). Dec 1983. Contract AC02-76CH03073. 37p. NTIS, PC A03/MF A01. Order Number DE84004300.

An extensive numerical study has been carried out for internal modes with toroidal mode number unity. These are internal kink modes, when the q = 1 surface falls within the plasma, and have a ballooning characteristic when q/sub axis/ > 1. Both modes show a dependence on the pressure and have a second region of stability at high β. A parameter survey has been conducted, varying the geometry, i.e., aspect ratio, ellipticity, triangularity, etc. and the current profiles, through the pressure and safety factor. The principal results show that the modes are dependent on the geometry and are strongly stabilized by high-order, noncircular effects. Broader pressure profiles and reduced shear are favorable for limiting the instability.

11235 **(PPPL—2065) Particle and heat flux measurements in PDX edge plasmas.** Budny, R.; Manos, D. (Princeton Univ., NJ (USA). Plasma Physics Lab.). Dec 1983. Contract AC02-76CH03073. 23p. NTIS, PC A02/MF A01. Order Number DE84004305.

This paper describes the use of novel combined Langmuir-calorimeter probes to measure edge plasma conditions near the midplane in PDX. The probes consisted of up to five Langmuir probes and up to two calorimeters. Single and double probe characteristics yield n/sub e/ and T/sub e/ which are compared with that derived from a triple probe analysis. The calorimeters measure heat flux in the electron and ion drift directions. This paper presents time-resolved radial profiles of n/sub e/, T/sub e/, V/sub F/ (floating potential), and P (heat flux) during high power neutral beam-heated, single-null discharges and circular scoop limiter discharges. The temporal dependence of these quantities displays the previous observed behavior with respect to gross discharge characteristics; however, an additional dependence on confinement mode has been observed. During the H-mode of energy confinement, a transient depression of n/sub e/, T/sub e/, and P occurs in the scrape-off plasma.

11236 **(RL—83-009) Physics of laser compression of plasmas.** Key, M.H. (Rutherford Appleton Lab., Chilton (UK)). Jan 1983. 21p. NTIS (US Sales Only), PC A02/MF A01. Order Number DE83704458.

These lecture notes serve as a supplement to the author's Lectures on the Physics of the Super Dense Region' (Laser Plasma Interactions. Ed. R.A. Cairns and J.J. Sanderson. SUSSP publications Dpt. Phys., Univ. Edinburgh. (1980)). Material, revised and updated to reflect the significant developments which have occurred in the last three years, is discussed under the headings; thermal conduction, ablation governed by electron thermal conduction, experimental study of mass ablation rate and ablation pressure, thermal smoothing of pressure variations due to non-uniform irradiation, and Rayleigh-Taylor instability.

11237 **(SAI—83-1147/PRI-71) Magnetic fusion energy program. Final report.** Aamodt, R.E.; Catto, P.J.; D'Ippolito, D.A.; Francis, G.L.; Hafizi, B.; Lee, X.S.; Myra, J.R.; Rohde, D.C.; Tsang, K.T. (Science Applications, Inc., Boulder, CO (USA). Plasma Research Inst.). 31 Dec 1983. Contract AC03-76ET53057. 66p. NTIS, PC A04/MF A01. Order Number DE84004896.

During the past two years SAI/PRI has expended essentially all its DOE effort on issues central to the mirror fusion program. In addition to extending our equilibrium, transport, and stability studies of standard tandem mirrors, we have become deeply involved in investigations of tandem mirrors with thermal barriers, and hot particle populations employed for stability. Technical reviews are given of our efforts and an assessment of their impact on the mirror program. We also summarize our final bumpy torus equilibrium considerations as well as an application of our stability techniques to the study of hot particle effects on ballooning modes in tokamaks.

11238 **(TRITA-EPP—82-10) Critical ionization velocity mechanism for the case of gas mixture.** Raadu, M.A. (Royal Inst. of Tech., Stockholm (Sweden). Dept. of Plasma Physics). Aug 1982. 8p. (CONF-820618—16). NTIS (US Sales Only), PC A02/MF A01. Order Number DE83704461.

From International conference on plasma physics; Goeteborg, Sweden (7 Jun 1982).

The theory of the critical ionization velocity mechnisms is discussed. In the case of gas mixture the critical velocity is expected to depend on the ionization cross sections. An analytic approximation is introduced which can be used to set limits on a generalized expression for the critical velocity of gas mixtures.

11239 **(TRITA-EPP—82-13) Critical ionization velocity - a bibliography.** Axnaes, I.; Brenning, N.; Raadu, M.A. (Royal Inst. of Tech., Stockholm (Sweden). Dept. of Plasma Physics). Dec 1982. 28p. NTIS (US Sales Only), PC A03/MF A01. Order Number DE83704463.

A list of all relevant contributions, known to the authors, concerning the critical ionization velocity phenomena is presented. The contributions are classified and described in a few sentences.

11240 **(TRITA-EPP—82-14) Review of impact experiments on the critical ionization velocity.** Brenning, N. (Royal Inst. of Tech., Stockholm (Sweden). Dept. of Plasma Physics). Oct 1982. 40p. (CONF-8210190—1). NTIS (US Sales Only), PC A03/MF A01. Order Number DE83704464.

From Workshop on Alfven's critical velocity effect; Garching bei Muenchen, F.R. Germany (11 Oct 1982).

The impact experiments on the critical ionization velocity (V sub (c)) interactions are reviewed. In these experiments, a highly ionized plasma impacts on a neutral gas cloud. V sub (c)-interaction is observed only when the magnetic field, and the neutral gas density, are above certain critical limits. The values of these limits, however, differ between the experiments. The extrapolation of the laboratory results to space applications is also discussed.

11241 **(TRITA-EPP—82-15) Circuit effects on pierce instabilities, and double-layer formation.** Raadu, M.A.; Silevitch, M.B. (Royal Inst. of Tech., Stockholm (Sweden). Dept. of Plasma Physics). Nov 1982. 13p. NTIS (US Sales Only), PC A02/MF A01. Order Number DE83704465.

The role of the Pierce instability in the formation of double layers is considered and compared with that of the Buneman instability. Pierce instabilities have been identified in a double-layer experiment, where they lead to ion trapping. Here the effects of external circuit elements are considered. In the case of immobile ions the onset criteria are unaffected, but in the unstable range the growth rate is reduced by the external impedance. Required experimental values of the circuit elements are estimated. The possible relevance to computer simulations is noted.

11242 **(TRITA-PFU—82-11) Zero-dimensional EXTRAP computer code.** Karlsson, P. (Svensk Kaernbraenslefoersoerjning AB, Stockholm). Oct 1982. 31p. NTIS (US Sales Only), PC A03/MF A01. Order Number DE83704466.

A zero-dimensional computer code has been designed for the EXTRAP experiment to predict the density and the temperature and their dependence upon parameters such as the plasma current and the filling pressure of neutral gas. EXTRAP is a Z-pinch immersed in a vacuum octupole field and could be either linear or toroidal. In this code the density and temperature are assumed to be constant from the axis up to a breaking point from where they decrease linearly in the radial direction out to the plasma radius. All quantities, however, are averaged over the plasma volume thus giving the zero-dimensional character of the code. The particle, momentum and energy one-fluid equations are solved including the effects of the surrounding neutral gas and oxygen impurities. The code shows that the temperature and density are very sensitive to the shape of the plasma, flatter profiles giving higher temperatures and densities. The temperature, however, is not strongly affected for oxygen concentration less than 2% and is well above the radiation barrier even for higher concentrations.

11243 **(TRITA-PFU—82-12) Experimental studies of equilibrium in a linear EXTRAP z-pinch discharge.** Drake, J.R. (Svensk Kaernbraenslefoersoerjning AB, Stockholm). Oct 1982. 19p. NTIS (US Sales Only), PC A02/MF A01. Order Number DE83704467.

Experimental studies of the radial equilibrium condition in linear Extrap discharge have been carried out. Bennet like scaling, NT α I^2 sub (p), has been observed where N is the plasma line den-

sity, T is the tempreature and I sub (p) is the plasma discharge current.

11244 **(TRITA-PFU—82-14) Finite larmor radius stabilization of Z-pinches.** Hellsten, T. (Svensk Kaernbraenslefoersoerjning AB, Stockholm). Dec 1982. 15p. NTIS (US Sales Only), PC A02/MF A01. Order Number DE83704468.

Finite Larmor radius stabilization of Z-pinches is discussed. Stability criteria can be derived for a class of equilibria having constant mass and current density. The internal modes can be stabilized provided the line density not exceed a critical value of the order of 10^{18} ions/m.

11245 **(TRITA-PFU—83-01) Alfven wave excitation in a cavity with a transverse magnetic field.** Bures, M. (Svensk Kaernbraenslefoersoerjning AB, Stockholm). Dec 1982. 31p. NTIS (US Sales Only), PC A03/MF A01. Order Number DE83704469.

A transversely magnetized cylindrical plasma model with an internal rod conductor is used to approximate the FIVA internal ring device of Spherator type with a purely poloidal magnetic field. It is shown that an excitation asymmetry along the plasma column, i.e. with a wave number k sub (z) does not equal 0, introduces a coupling between the magnetoacoustic and shear Alfven waves in the frequency range $\omega << \omega$ sub (ci). The introduction of an equilibrium mass motion along the plasma cylinder introduces a flow continuum. Simultaneously the Alfven resonance frequency becomes Doppler shifted. The experimental observations indicate that cavity modes do not build up in the FIVA device in the case of nonsymmetric excitation. If on the other hand the exciting structure becomes symmetric, i.e. with k sub (z) equals 0, the magnetoacoustic resonance become excited. The resulting Q values are rather low which indicates that the coupling to the shear wave through the Hall electric field cannot be neglected.

11246 **(TRITA-PFU—83-03) Interaction of MHD waves with a plasma surrounded by a cold gas-mantle.** Bures, M. (Royal Inst. of Tech., Stockholm (Sweden). Plasma Physics and Fusion Research). Jan 1983. 37p. NTIS (US Sales Only), PC A03/MF A01. Order Number DE83704470.

In cold gas-mantle systems a partially ionized boundary layer is formed which becomes highly resistive to the magentoacoustic waves. Especially below the ion gyro frequency ω sub (ci) the effective resistivity due to ion-neutral collisions can attain values being an order of magnitude higher than the Spitzer resistivity. Thus, a substantial part of the RF power available at the antenna can be damped in such a layer. The application of the RF power in the Alfven wave frequency range of the internal ring device FIVA results in a relatively powerful plasma heating. The plasma-neutral gas balance is strongly modified by this power input, as well as the plasma equilibrium which becomes a sensitive function of the neutral gas content of the plasma. An RF power of the order of 0.5 MW is absorbed in the plasma.

11247 **(UCID—19943) Initial simultaneous Thomson-scattering measurements in the TMX-U tandem mirror.** Goodman, R.K.; Rognlien, T.D. (Lawrence Livermore National Lab., CA (USA)). 27 Dec 1983. Contract W-7405-ENG-48. 19p. NTIS, PC A02/MF A01. Order Number DE84005225.

In this report, we briefly describe the TMX-U Thomson-scattering systems; we compare TMX-U velocity-distribution measurements with computer modeling; and we present and discuss our first simultaneous measurements of end-plug and central-cell electron temperatures.

11248 **(UCRL—89430) Development of soft x-ray streak cameras at Lawrence Livermore National Laboratory.** Medecki, H.; Phillips, G.E.; Bushman, J.F. (Lawrence Livermore National Lab., CA (USA)). 27 Jun 1983. Contract W-7405-ENG-48. 12p. NTIS, PC A02/MF A01. Order Number DE83015841.

Soft x-ray streak cameras are used in conjunction with several instruments for the diagnostic of laser irradiated targets. A program was undertaken to develop cameras satisfying the requirements of the laser facility, to improve the reliability and performance of the camera and to reduce the level of effort required to set and operate each diagnostic. The implemented soft x-ray streak cameras can be operated either manually or automatically.

11249 **(UPTEC—8254R) MHD-equilibrium and stability of a z-pinch in an external magnetic field.** Brynolf, J. (Uppsala Univ. (Sweden). Inst. of Tech.). May 1982. 96p. NTIS (US Sales Only), PC A05/MF A01. Order Number DE83704471.

The freeboundary of a sharp z-pinch plasma surrounded by four external conductors, all carrying the same current, is solved. This problem, which is considered as two-dimensional, is transformed by a conformal mapping of the vacuum domain onto the outside of the unit circle. In this area both the complex potential and the mapping itself are analytical functions with well-known boundary values and hence they can be solved uniquely. For the configuration where the external conductors lie in the corner of a square, an analytical expression for the coordinates of the surface is found. Each ratio between the plasma and the vacuum currents results in a family of surfaces in which each member can be labeled either with the magnetic field strength on the surface or with the distance to the external conductors. In section III, the energy principle is used to investigate the stability of the equilibrium configurations against two-dimensional displacements. They are found both analytically and by computer to be unstable for all parametervalues. Without external currents any translation gives marginal stability. For the case with conductors forming a square an analysis of the stability against rigid-body translation gives the opposite result. Then the external currents instead have a stabilizing effect.

11250 **(LA-tr—84-3) Stark spectroscopy of hydrogen lines in turbulent plasma. 1. Low-frequency turbulence.** Berezin, A.B.; Lyublin, B.V.; Yakovlev, D.G. (Los Alamos National Lab., NM (USA); Nauchno-Issledovatel'skij Inst. Ehlektrofizicheskoj Apparatury, Leningrad (USSR)). 1984. Contract W-7405-ENG-36. C; NIIEFA-P-K-0609, 1983. 52p. NTIS, PC A03/MF A01. Order Number DE84004443.

Portions are illegible in microfiche products.

Set forth sequentially are the results of calculations of the Stark broadening of the spectral lines of hydrogen atoms H/sub α/, H/sub β/ and H/sub γ/ in plasma under the influence of low-frequency (quasistatic) electric microfields. The results are presented in a form which is convenient for practical utilization during processing of the data of various experiments on the study of plasma. Also given are calculation formulas, graphs and tables, which associate the parameters of the plasma with the parameters of the profiles of the lines H/sub α/, H/sub β/ and H/sub γ/. Basic attention is given to spectroscopy of turbulent plasma. Along with the results of studies published earlier, a series of original results is set forth. Specifically, a method is proposed for measuring the parameters of a low-frequency field according to the position of the center of gravity of the figure near one-half of the profile of the line.

11251 **(LA-tr—84-2) Study of turbulence of plasma of a rapid linear theta-pinch according to the Stark broadening of the spectral lines of deuterium.** Berezin, A.B.; Lyublin, B.V.; Yakovlev, D.G. (Los Alamos National Lab., NM (USA); Nauchno-Issledovatel'skij Inst. Ehlektrofizicheskoj Apparatury, Leningrad (USSR)). 1984. Contract W-7405-ENG-36. C; NIIEFA-P-K-0586, 1982. 18p. NTIS, PC A02/MF A01. Order Number DE84004675.

Analysis of the contours of the spectral lines of deuterium D/sub α/ and D/sub β/, irradiated by the theta-pinch plasma of the UTRO unit in the stage of rapid compression, indicates the presence of intensive low-frequency (omega much less than omega/sub pe/) oscillations of the plasma with an average amplitude $E_0 \approx$ 200 kv/cm, and a very small spread of the ampitudes $\Delta E_0/E_0 \leq 0.1$. The experimental data may be explained if one assumes that oscillating of the near group of modes, of lower-hybrid drift instability, takes place in the plasma. Such turbulence is capable of effectively accelerating electrons at small pitch-angles along the magnetic field by the mechanism of resonance diffusion, which may be the reason for the occurrence of X-ray radiation, observed in the stage of maximum compression.

11252 rf stabilization of an axisymmetric tandem mirror. Ferron, J.R.; Hershkowitz, N.; Breun, R.A.; Golovato, S.N.; Goulding, R. (University of Wisconsin, Nuclear Engineering Department, Madison, Wisconsin 53706). *Physical Review Letters;* **51**: No. 21, 1955-1958(21 Nov 1983). Contract AC02-78ER04861.

Plasma with significant central-cell beta can be sustained in a tandem mirror composed of three axisymmetric simple mirror cells by the use of ion-cyclotron resonant heating. Radial ponderomotive force due to the rf electric field opposes the centrifugal force due to the field-line curvature to ensure interchange stability. This is indicated by the sensitive dependence of the plasma stability on the sign of the difference between the rf frequency and the ion-cyclotron frequency.

11253 Stability of n = 1 kink modes in bean-shaped tokamaks. Manickam, J.; Grimm, R.C.; Okabayashi, M. (Plasma Physics Laboratory, Princeton University, Princeton, New Jersey 08544). *Physical Review Letters;* **51**: No. 21, 1959-1962(21 Nov 1983). Contract AC02-76CH03073.

Numerical studies show that by indenting the small-major-radius side of conventional finite-aspect-ratio tokamaks, significant improvements to the stability of pressure-driven ideal magnetohydrodynamics modes can be achieved. The internal n = 1 kink mode can be stabilized completely with quite modest indentation. In the presence of a nearby conducting wall, kink-ballooning mode stability is also improved, and accessibility to a second stable region at high plasma β is possible.

11254 Ballooning mode stability of bean-shaped cross sections for high-β tokamak plasmas. Chance, M.S.; Jardin, S.C.; Stix, T.H. (Plasma Physics Laboratory, Princeton University, Princeton, New Jersey 08544). *Physical Review Letters;* **51**: No. 21, 1963-1966(21 Nov 1983). Contract AC02-76CH03073.

Indentation of a tokamak plasma on its inner major radius side is shown to be strongly beneficial for achieving high-β stability against ballooning modes. With use of a set of reasonable equilibrium profiles, it is found that moderate indentation provides accessibility to the second region of stability. Ohmic equilibrium configurations which exhibit the second stability region have not yet been found.

11255 Energetic particle stabilization of ballooning modes in tokamaks. Rosenbluth, M.N.; Tsai, S.T.; Van Dam, J.W.; Engquist, M.G. (Institute for Fusion Studies, University of Texas, Austin, Texas 78712). *Physical Review Letters;* **51**: No. 21, 1967-1970(21 Nov 1983). Contract FG05-80ET53088.

Introduction of an anisotropic, highly energetic trapped-particle species into a tokamak may allow direct stable access to the high-beta regime of second stability. Under certain conditions, the mode at marginal stability acquires a real frequency close to the precessional drift frequency of the energetic particles, perhaps correlating with recent "fishbone" observations on PDX.

11256 Heating of plasma ions in a tokamak by the second-harmonic ion-cyclotron resonance interaction with radio-frequency waves. Hwang, D.Q.; Hosea, J.; Thompson, H.; Wilson, J.R.; Davis, S.; Herndon, D.; Kaita, R.; Mueller, D.; Suckewer, S.; Daughney, C. (Plasma Physics Laboratory, Princeton University, Princeton, New Jersey 08544). *Physical Review Letters;* **51**: No. 20, 1865-1868(14 Nov 1983). Contract AC02-76CH03073.

The radio-frequency-wave heating of ions in a tokamak plasma employing the second-harmonic ion-cyclotron resonance interaction has been demonstrated in recent high-power (3-MW) experiments on the Princeton Large Torus tokamak.

11257 ZAPP: An inexpensive versatile x-ray source. Dietrich, D.D.; Fortner, R.J.; Price, D.F.; Stewart, R.E. (Lawrence Livermore National Laboratory, Livermore, California 94550). *IEEE (Institute of Electrical and Electronics Engineers) Transactions on Nuclear Science;* **NS-28**: No. 2, 1366-1368(Apr 1981). (CONF-801111—).

From 6. conference on application of accelerators in research and industry; Denton, TX, USA (3 Nov 1980).

The Z-pinch atomic physics project (ZAPP) in E-Division at the Lawrence Livermore Laboratory has been established to study the physics of high temperature high density plasmas. Using a linear hollow gas puff or a cylindrical wire array the authors can obtain electron temperatures in the keV region and densities of 10^{20} - 10^{22}/cm^3 for virtually any element or mixtures of elements. At the center of this project is a 100 kV, 55 kJ capacitor bank which discharges through low inductance switches and transmission lines into the load developing peak currents in the 2.5 x 10^6 amp range. One of the authors' goals is to have all major diagnostics temporally and spatially resolved. Included in this list are pinhole photography, grazing incidence and bent crystal spectroscopy, laser interferometry and holography, and pulsed laser scattering. The authors have also implemented an array of PIN diodes, XRD detectors and Rogowski coils. With a clean, repeatable, well diagnosed plasma, they can address a wealth of questions concerning both plasma and atomic physics. The main experimental emphasis centers on the investigation of plasma properties such as line broadening and shifting of spectral lines and in general testing the ability of existing codes to predict observed spectra of both lines and continuum radiation. Other plasma properties to be studied are the formation of hot spots and the production of stabilized plasmas. Atomic physics experiments include the study of radiative and relativistic effects in highly stripped heavy ions, radiation transport phenomena, collisional excitation rates and level populations to test inversion schemes.

11258 Contributions to fusion research from studies of foil-excited heavy ion beams. Johnson, B.M.; Gregory, D.C.; Jones, K.W. (Brookhaven National Laboratory, Upton, NY 11973). *IEEE (Institute of Electrical and Electronics Engineers) Transactions on Nuclear Science;* **NS-28**: No. 2, 1350-1353(Apr 1981). (CONF-801111—). Contract AC02-76CH00016.

From 6. conference on application of accelerators in research and industry; Denton, TX, USA (3 Nov 1980).

XUV spectra in the wavelength region from 5-55 nm have been measured at Brookhaven National Laboratory for foil-excited ion beams of Au, W, Zr, Mo, Fe, and Ti. These atoms are of particular interest in fusion research. In sharp contrast to the wide-ranging timedependent charge state evolution of heavy ions in a plasma discharge, foil excitation of a heavy ion beam produces relatively well-defined narrow charge-state distributions. Existing accelerators, such as the Brookhaven MP tandems, can produce sufficiently energetic heavy ion beams to span the range of charge states found in present-day tokamaks. The comparison of spectra from beam-foil excitation and tokamak plasmas can therefore be used to infer the average ion and charge state makeup of the plasma discharge. Such comparisons with Au, W, and Mo features in tokamak spectra are discussed and spectra for Zr and Fe (which are expected contaminants in new tokamaks) are presented. Additional contributions to fusion research from beam-foil experiments are demonstrated. These include: wavelengths and identifications for lines which can be resolved in plasma spectra and direct determinations of radiative lifetimes and absorption oscillator strengths for these transitions which are used to determine impurity concentrations in plasmas.

11259 Plasma confinement. A study of plasma equilibria in axisymmetric devices. Couper, T.A. Oxford, England; Oxford University (1981). 188p. Available from British Library, Boston Spa, Wetherby, West Yorks. No. D45019/83.

This thesis is concerned with the construction of analytic solutions of the Grad-Shafranov (G-S) equation, which itself is the cornerstone of axisymmetric MHD equilibrium theory.

11260 (ANL/FPP—83-1-Vol.1) Blanket comparison and selection study. Volume I. (Argonne National Lab., IL (USA)). Oct 1983. Contract W-31-109-ENG-38. 458p. NTIS, PC A20/MF A01. Order Number DE84003657.

Portions are illegible in microfiche products. Original copy available until stock is exhausted.

The objectives of the Blanket Comparison and Selection Study (BCSS) can be stated as follows: (1) Define a small number (~ 3) of blanket design concepts that should be the focus of the blanket R and D program. A design concept is defined by the selection of all materials (e.g., breeder, coolant, structure and multiplier) and other major characteristics that significantly influence the R and D requirements. (2) Identify and prioritize the critical issues for the leading blanket concepts. (3) Provide the technical input necessary to develop a blanket R and D program plan. Guidelines for prioritizing the R and D requirements include: (a) critical feasibility issues for the leading blanket concepts will receive the highest priority, and (b) for equally important feasibility issues, higher R and D priority will be given to those that require minimum cost and short time.

11261 **(ANL/FPP—83-1-Vol.2) Blanket comparison and selection study. Volume II.** (Argonne National Lab., IL (USA)). Oct 1983. Contract W-31-109-ENG-38. 487p. NTIS, PC A21/MF A01. Order Number DE84003656.

Portions are illegible in microfiche products. Original copy available until stock is exhausted.

This volume contains extensive data for the following chapters: (1) solid breeder tritium recovery, (2) solid breeder blanket designs, (3) alternate blanket concept screening, and (4) safety analysis. The following appendices are also included: (1) blanket design guidelines, (2) power conversion systems, (3) helium-cooled, vanadium alloy structure blanket design, (4) high wall loading study, and (5) molten salt safety studies. (MOW)

11262 **(CONF-820948—14) Development of an ion source for long-pulse (30-s) neutral beam injection.** Menon, M.M.; Barber, G.C.; Blue, C.W.; Dagenhart, W.K.; Gardner, W.L.; Haselton, H.H.; Moeller, J.A.; Ponte, N.S.; Ryan, P.M.; Schecter, D.E. (Oak Ridge National Lab., TN (USA)). 1982. Contract W-7405-ENG-26. 6p. NTIS, PC A02/MF A01. Order Number DE84004460.

From 12. symposium on fusion technology; Juelich, F.R. Germany (13 Sep 1982).

This paper describes the development of a long-pulse positive ion source that has been designed to provide high brightness deuterium beams (divergence $\simeq 0.25°$ rms, current density $\simeq 0.15$ A cm^{-2}) of 40 to 45 A, at a beam energy of 80 keV, for pulse lengths up to 30 s. The design and construction of the ion source components are described with particular emphasis placed on the long-pulse cathode assembly and ion accelerator.

11263 **(CONF-821108—35) Empirical scaling formulas for critical current and critical field for commercial NbTi.** Lubell, M.S. (Oak Ridge National Lab., TN (USA)). 1982. Contract W-7405-ENG-26. 5p. NTIS, PC A02/MF A01. Order Number DE84004587.

From Applied superconductivity conference; Knoxville, TN, USA (30 Nov 1982).

This paper presents the results of an analysis of both published and unpublished critical current data given as a function of both field and temperature. Simple formulas have been obtained for (1) the critical temperature as a function of field that is needed to obtain an estimate of the current sharing temperature and hence temperature margin, (2) the critical current density for constant temperature as a function of field, and (3) the critical current density for constant field as a function of temperature.

11264 **(CONF-830795—8) DCT-8 pumped limiter design considerations.** Fuller, G.M.; Cramer, B.A.; Haines, J.R. (Oak Ridge National Lab., TN (USA)). 1983. Contract W-7405-ENG-26. 15p. NTIS, PC A02/MF A01. Order Number DE84004446.

From Symposium on energy removal and particle control and toroidal fusion devices; Princeton, NJ, USA (26 Jul 1983).

Disruption erosion drives the life of the DCT-8 pumped limiter. This result came from an evaluation of beryllium (Be), beryllium oxide (BeO), and silicon carbide (SiC) as candidate surface tile materials. Beryllium oxide was selected as the reference tile materials. Beryllium oxide was selected as the reference tile material because it has the longest life: 13 full power hours (2300 burns at 20 s/burn) or 2.3 years of DCT-8 operation. The fabricability of any of the candidate materials and the ability to survive thermal shock conditions and electromagnetic loads imposed by distuptions are serious concerns. The most desirable materials from an engineering standpoint (graphite and high-Z, e.g., tantalum) were eliminated due to physical considerations.

11265 **(CONF-830942—78) Experience with Zr-Al getter pumps in the ISX-B tokamak.** Emerson, L.C.; Mioduszewski, P.K.; Simpkins, J.E. (Oak Ridge National Lab., TN (USA)). 1983. Contract W-7405-ENG-26. 6p. NTIS, PC A02/MF A01. Order Number DE84004377.

From 3. topical meeting on fusion reactor materials; Albuquerque, NM, USA (19 Sep 1983).

Zr-Al getter pumps have been used in the ISX-B tokamak in connection with a series of pump limiter experiments. Experience with these pumps in this environment has revealed several problems that may limit their usefulness under typical tokamak operating conditions. Although the pumps perform satisfactorily while in operation with hydrogenic pumping speeds of 1-2 x 10^3 L/s at pressures of ~ 10 mtorr, some unknown mechanism, on occasion, slightly activates pumps that had been previously passive. Such behavior precludes the use of any operations that require high hydrogen pressures in the torus. Additionally, discharge cleaning operations cannot be safely carried out after the pumps are fully activated. Continued use of the pumps eventually leads to destruction of two getter cartridges from hydrogen embrittlement.

11266 **(CONF-831171—17) Design considerations for achieving high vacuum integrity in fusion devices.** Fuller, G.M.; Haines, J.R. (Oak Ridge National Lab., TN (USA)). 1983. Contract W-7405-ENG-26. 35p. NTIS, PC A03/MF A01. Order Number DE84004684.

From American Vacuum Society meeting; Boston, MA, USA (1 Nov 1983).

Achieving high vacuum integrity in fusion devices requires close attention to both the overall system configuration and the design details of joints and seals. This paper describes the factors in selecting the system configuration, from a vacuum standpoint, for the Princeton Plasma Physics Laboratory (PPPL) DCT-8 Tokamak device. The DCT-8 (driven current tokamak) is the eighth design in a series of tokamak concepts defined to cover the magnetic confinement and development gap between the Tokamak Fusion Test Reactor (TFTR) and the Engineering Test Reactor (ETR). Leak detection concept development is considered a vital activity, as well as the definition of a configuration that minimizes the consequences of leaks. A major part of the vacuum boundaries of the magnet system and the plasma system is common. For the major penetrations, primary and secondary seals are provided with vacuum control over the region between seals. The intent is to instrument these cavities and provide automated recordings of these measurements for leak maintenance.

11267 **(CONF-831180—8) 2D accelerator design for SITEX negative ion source.** Whealton, J.H.; Raridon, R.J.; McGaffey, R.W.; McCollough, D.H.; Stirling, W.L.; Dagenhart, W.K. (Oak Ridge National Lab., TN (USA)). 1983. Contract W-7405-ENG-26. 8p. NTIS, PC A02/MF A01. Order Number DE84003301.

From 3. international symposium on the production and neutralization of negative ions and beams; Upton, NY, USA (14 Nov 1983).

Solving the Poisson-Vlasov equations where the magnetic field, B, is assumed constant, we optimize the optical system of a SITEX negative ion source in infinite slot geometry. Algorithms designed to solve the above equations were modified to include the curved emitter boundary data appropriate to a negative ion source. Other configurations relevant to negative ion sources are examined.

11268 **(CONF-831203—39) Overcurrent protection device for neutral beam sources.** Praeg, W.F. (Argonne National Lab., IL (USA)). 1983. Contract W-31-109-ENG-38. 6p. NTIS, PC A02/MF A01. Order Number DE84004013.

From 10. symposium on fusion engineering; Philadelphia, PA, USA (5 Dec 1983).

Portions are illegible in microfiche products.

Electrical loads connected to capacitance elements in high voltage direct current systems are protected from damage caused by capacitance discharge overcurrents by connecting a longitudinal inductor between the capacitance element and the load. The inductor comprises a bifilar winding wound about a magnetic core, which forms an incomplete magnetic circuit. A diode is connected across a portion of the bifilar winding. Most of the energy discharged from the capacitance element is stored in the inductor and then dissipated, away from the load, in an L-R circuit comprising the diode and the coil winding. Multiple high voltage circuits having capacitance elements may be connected to loads through bifilar windings all wound about the aforementioned magnetic core.

11269 **(CONF-831203—56) Computer simulation of magnetic field circuits in ATF.** White, J.A.; Googe, J.M.; Nickels, L.E. (Oak Ridge National Lab., TN (USA); Nickels Engineering, Inc., New Berlin, WI (USA)). 1983. Contract W-7405-ENG-26. 3p. NTIS, PC A02/MF A01. Order Number DE84004583.

From 10. symposium on fusion engineering; Philadelphia, PA, USA (5 Dec 1983).

Portions are illegible in microfiche products.

The proposed design of the Advanced Toroidal Facility (ATF) contains several closely coupled magnetic field circuits that are being modeled using the SUPER*SCEPTRE computer program in order to predict their transient behavior. The results of this transient analysis study will be used to determine component values and/or special precautions that may be required for power supply and other circuit element protection due to the mutual coupling between circuits. ATF is a continuous-coil torsatron device using resistive coils in a pulsed mode of operation in which a current fluctuation in one coil induces voltages in the other circuit element protection due to the mutual coupling between circuits. ATF is a continuous-coil torsatron device using resistive coils in a pulsed mode of operation in which a current fluctuation in one coil induces voltages in the other circuit that may not be desirable. The model contains the solid-state power supplies' equivalent circuits, the resistance and self-inductance of each magnetic field coil, and the mutual inductances of every coil combination. The SUPER*SCEPTRE program allows for the direct input of all electrical components as well as the mutual inductances. The power supply voltages are entered as preprogrammed wave shapes designed to achieve the desired magnetic field strengths. The outputs of this program are tables and plots of voltages and currents associated with each circuit component.

11270 **(CONF-831203—57) National RF Test Facility as a multipurpose development tool.** McManamy, T.J.; Becraft, W.R.; Berry, L.A.; Blue, C.W.; Gardner, W.L.; Haselton, H.H.; Hoffman, D.J.; Loring, C.M. Jr.; Moeller, F.A.; Ponte, N.S. (Oak Ridge National Lab., TN (USA)). 1983. Contract W-7405-ENG-26. 5p. NTIS, PC A02/MF A01. Order Number DE84004577.

From 10. symposium on fusion engineering; Philadelphia, PA, USA (5 Dec 1983).

Portions are illegible in microfiche products.

Additions and modifications to the National RF Test Facility design have been made that (1) focus its use for technology development for future large systems in the ion cyclotron range of frequencies (ICRF), (2) expand its applicability to technology development in the electron cyclotron range of frequencies (ECRF) at 60 GHz, (3) provide a facility for ELMO Bumpy Torus (EBT) 60-GHz ring physics studies, and (4) permit engineering studies of steady-state plasma systems, including superconducting magnet performance, vacuum vessel heat flux removal, and microwave protection. The facility will continue to function as a test bed for generic technology developments for ICRF and the lower hybrid range of frequencies (LHRF). The upgraded facility is also suitable for mirror halo physics experiments.

11271 **(CONF-831203—58) Characteristics of a long-pulse (30-s), high-power (4-MW) ion source for neutral beam injection.** Menon, M.M.; Barber, G.C.; Combs, S.K.; Dagenhart, W.K.; Gardner, W.L.; Haselton, H.H.; Moeller, J.A.; Ponte, N.S.; Ryan, P.M.; Schechter, D.E. (Oak Ridge National Lab., TN (USA)). 1983. Contract W-7405-ENG-26. 6p. NTIS, PC A02/MF A01. Order Number DE84004681.

From 10. symposium on fusion engineering; Philadelphia, PA, USA (5 Dec 1983).

Portions are illegible in microfiche products.

A quasi-steady-state ion source has been developed for neutral beam injection applications. It is of the duoPIGatron type designed for delivering 50 A of hydrogen ions at 80 keV for 30-s-long pulses. Ion beams of 40 A at 75 keV were extracted for pulse lengths up to 30 s, maintaining excellent optical quality in the beam for the entire pulse duration. The design features and operational characteristics of the ion source are elaborated.

11272 **(CONF-831203—59) Parametric system studies of candidate TF coil system options for the Tokamak Fusion Core Experiment (TFCX).** Reiersen, W.T.; Flanagan, C.A.; Miller, J.B. (Oak Ridge National Lab., TN (USA)). 1983. Contract W-7405-ENG-26. 6p. NTIS, PC A02/MF A01. Order Number DE84004783.

From 10. symposium on fusion engineering; Philadelphia, PA, USA (5 Dec 1983).

System studies were performed to determine the sensitivity of hybrid and superconducting toroidal field (TF) coil system options to maximum field at the TF coil and to field enhancement due to resistive insert coils. The studies were performed using Tokamak Fusion Core Experiment (TFCX) design assumptions, guidelines, and criteria and involved iterative execution of the Fusion Engineering Design Center (FEDC) systems code, magnetohydrodynamics (MHD) equilibrium code, and EFFI (a code to evaluate magnetic field strength). The results indicate that for TFCX with no minimum wall loading specified, a design point chosen solely on the basis of cost would likely be in the low-field region of design space where the cost advantage of hybrids is least apparent. However, as the desired neutron wall loading increases, the hybrid option suggests an increasing cost advantage over the all-superconducting option; this cost advantage is countered by increased complexity in design - particularly in assembly and maintenance.

11273 **(CONF-831203—60-Draft) Thermal shock considerations for the TFCX limiter and first wall.** Haines, J.R.; Fuller, G.M. (Oak Ridge National Lab., TN (USA)). 1983. Contract W-7405-ENG-26. 15p. NTIS, PC A02/MF A01. Order Number DE84004420.

From 10. symposium on fusion engineering; Philadelphia, PA, USA (5 Dec 1983).

Resistance to thermal shock fracture of limiter and first wall surface material candidates during plasma disruption heating conditions is evaluated. A simple, figure-of-merit type thermal shock parameter which provides a mechanism to rank material candidates is derived. Combining this figure-of-merit parameter with the parameters defining specific heating conditions yields a non-dimensional thermal shock parameter. For values of this parameter below a critical value, a given material is expected to undergo thermal shock damage. Prediction of thermal shock damage with this parameter is shown to exhibit good agreement with test data. Applying this critical parameter value approach, all materials examined in this study are expected to experience thermal shock damage for nominal TFCX plasma disruption conditions. Since the extent of this damage is not clear, tests which explore the range of expected conditions for TFCX are recommended.

11274 **(CONF-831203—62) Design of the coolant system for the Large Coil Test Facility pulse coils.** Bridgman, C.; Ryan, T.L. (Grumman Aerospace Corp., Bethpage, NY (USA); Union Carbide Corp., Oak Ridge, TN (USA). Nuclear Div.). 1983. Contract W-7405-ENG-26. 5p. NTIS, PC A02/MF A01. Order Number DE84004440.

From 10. symposium on fusion engineering; Philadelphia, PA, USA (5 Dec 1983).

The pulse coils will be a part of the Large Coil Test Facility in Oak Ridge, Tennessee, which is designed to test six large tokamak-type superconducting coils. The pulse coil set consists of two resistive coaxial solenoid coils, mounted so that their magnetic axis is perpendicular to the toroidal field lines of the test coil. The pulse coils provide transient vertical fields at test coil locations to simulate the pulsed vertical fields present in tokamak devices. The pulse coils are designed to be pulsed for 30 s every 150 s, which results in a Joule heating of 116 kW per coil. In order to provide this capabil-

ity, the pulse coil coolant system is required to deliver 6.3 L/s (100 gpm) of subcooled liquid nitrogen at 10-atm absolute pressure. The coolant system can also cool down each pulse coil from room temperature to liquid nitrogen temperature. This paper provides details of the pumping and heat exchange equipment designed for the coolant system and of the associated instrumentation and controls.

11275 **(CONF-831203—67) Quality assurance aspects of the major procurements for the Large Coil Test Facility.** Taylor, D.J.; Thompson, P.B.; Ryan, T.L.; Queen, C.C.; Halstead, E.L.; Murphy, J.L.; Wood, R.J. (Oak Ridge National Lab., TN (USA)). 1983. Contract W-7405-ENG-26. 6p. NTIS, PC A02/MF A01. Order Number DE84004588.

From 10. symposium on fusion engineering; Philadelphia, PA, USA (5 Dec 1983).

The Large Coil Test Facility (LCTF) project is comprised of the test stand, supporting cryogenic systems, instrumentation, data acquisition, and utilities necessary for testing the large superconducting coils of the Large Coil Program (LCP). A significant portion of the facility hardware has been obtained through procurement actions with industrial suppliers. This paper addresses the project's experience in formulation and execution of quality assurance (QA) actions relative to several of the major items procured. Project quality assurance planning and specific features related to procurement activities for several of the more specialized test facility components are described. These component procurements include: (1) the coil test stand's major structural item (the bucking post) purchased from foreign industry; (2) fabrication and testing of high-current power supplies; (3) industrial fabrication of specialized instrumentation (voltage-tap signal conditioning modules); and (4) fabrication, installation, and testing of the liquid helium piping system.

11276 **(CONF-831203—68) Design description of the helical field coils for the Advanced Toroidal Facility.** Cole, M.J.; Thompson, P.B.; Jernigan, T.C.; Nelson, B.E.; Vinyard, L.M.; Johnson, R.L.; Williamson, D.E. (Oak Ridge National Lab., TN (USA)). 1983. Contract W-7405-ENG-26. 5p. NTIS, PC A02/MF A01. Order Number DE84004545.

From 10. symposium on fusion engineering; Philadelphia, PA, USA (5 Dec 1983).

Portions are illegible in microfiche products.

The Helical Field (HF) Coils for the Advanced Toroidal Facility will consist of two coils, which wrap around the plasma six times. The major radius of the coils will be 2.1 m with a minor radius of 45.75 cm to the coil current center. The coils will be positioned at assembly to within a 2 mm diameter around the winding law, Theta = 1/6 Phi. The coils will be fabricated as a set of 24 identical segments, 12 upper segments and 12 lower segments. These segments will be joined into continuous coils at the installation site by means of field assembled joints at the horizontal centerline of the machine. One special joint on each coil will contain the coil leads. The HF coils will consist of 14 copper turns and a structural member of stainless steel which has a cross section in the shape of a T. These pieces will be fabricated in accordance with the winding law Theta = 1/6 Phi. The copper turns will be water cooled and formed from CDA 101 or 102 copper. The 14 copper turns will be positioned such that 7 turns will be placed on each side of the structural tee. The structural tee will be fabricated from 44.45 mm thick stainless steel with a minimum yield strength of 205 MPa and a tensile strength of 485 MPa.

11277 **(CONF-831203—72) Diagnostic techniques for measuring temperature transients and stress transients in the first wall of an ICF reactor.** Melamed, N.T.; Taylor, L.H. (Westinghouse Research and Development Center, Pittsburgh, PA (USA)). 1983. Contract AC08-81DP40146. 31p. NTIS, PC A03/MF A01. Order Number DE84004687.

From 10. symposium on fusion engineering; Philadelphia, PA, USA (5 Dec 1983).

The primary challenge in the design of an Inertial Confinement Fusion (ICF) power reactor is to make the first wall survive the frequent explosions of the pellets. Westinghouse has proposed a dry wall design consisting of steel tubes coated with tantalum. This report describes the design of a test chamber and two diagnostic procedures for experimentally determining the reliability of the Westinghouse design. The test chamber simulates the x-ray and ion pulse irradiation of the wall due to a pellet explosion. The diagnostics consist of remote temperature sensing and surface deformation measurements. The chamber and diagnostics can also be used to test other first-wall designs.

11278 **(CONF-831203—73-Draft) Reactor assessments of advanced bumpy torus configurations.** Uckan, N.A.; Owen, L.W.; Spong, D.A.; Miller, R.L.; Ard, W.B.; Pipkins, J.F.; Schmitt, R.J. (Oak Ridge National Lab., TN (USA); Applied Microwave Plasma Concepts, Inc., Encinitas, CA (USA); McDonnell Douglas Astronautics Co., St. Louis, MO (USA)). 1983. Contract W-7405-ENG-26. 33p. NTIS, PC A03/MF A01. Order Number DE84004644.

From 10. symposium on fusion engineering; Philadelphia, PA, USA (5 Dec 1983).

Portions are illegible in microfiche products.

Recently, several configurational approaches and concept improvement schemes were introduced for enhancing the performance of the basic ELMO Bumpy Torus (EBT) concept and for improving its reactor potential. These configurations include planar racetrack and square geometries, Andreoletti coil systems, and bumpy torus-stellarator hybrids (which include twisted racetrack and helical axis stellarator-snakey torus). Preliminary evaluations of reactor implications of each of these configurations have been carried out based on magnetics (vacuum) calculations, transport and scaling relationships, and stability properties. Results indicate favorable reactor projections with a significant reduction in reactor physical size as compared to conventional EBT reactor designs carried out in the past.

11279 **(CONF-831257—1) Infrared monitoring of gyrotron windows.** Huey, H.; Lopez, N.; Hu, G.; Choi, E.; Mundie, L.;. (Varian Associates, Inc., Palo Alto, CA (USA)). 1983. Contract W-7405-ENG-26. 10p. NTIS, PC A02/MF A01. Order Number DE84004442.

From IEEE meeting; Washington, DC, USA (5 Dec 1983).

A technique for monitoring the gyrotron output window surface temperature with an infrared camera while the gyrotron is in operation has been developed. The IR camera views the window through a perforated waveguide wall, and serves both as a guide for the safe operation at high average power of the tube, as well as an aid in the analysis of new window designs. Window temperatures were studied as a function of a number of parameters, including gun anode voltage, beam current, magnetic field, coolant flow, and load matching. The IR technique is applicable to many types of high average power microwave and millimeter wave tubes. Successful operation of the Varian 60 GHz gyrotron to 214 kW CW was guided by the infrared camera. Analyses on 28, 56 and 60 GHz gyrotrons have led to a number of design changes. A comparison with computer calculations is also presented.

11280 **(CONF-8311111—2-Draft) Technological requisites of the magnetic fusion energy programme.** Cooper, W.A. (Oak Ridge National Lab., TN (USA)). 1983. Contract W-7405-ENG-26. 18p. NTIS, PC A02/MF A01. Order Number DE84004682.

From 2. inter-university energy symposium; Santiago, Chile (14 Nov 1983).

Portions are illegible in microfiche products.

An integral part of magnetic fusion energy research is the development of the technologies necessary for the confinement and heating of reactor-level plasmas. Heating systems based on energetic neutral beam particle injection or radio frequency waves (or both) will be required to heat plasmas to the temperatures at which fusion is self-sustaining. These systems may be used also to drive plasma currents. The magnet systems required to confine reactor-sized plasmas rely on the development of effective superconductors. Issues associated with safety and tritium handling concerns become important considerations in designing reactor concepts.

11281 **(CONF-8311111—3) Status of the Magnetic Fusion Energy Programme.** Cooper, W.A. (Oak Ridge National Lab., TN (USA)). 1983. Contract W-7405-ENG-26. 21p. NTIS, PC A02/MF A01. Order Number DE84004683.

From 2. inter-university energy symposium; Santiago, Chile (14 Nov 1983).

Portions are illegible in microfiche products.

Fusion reactor level plasma parameters have been achieved in experimental devices during the last decade. Energy breakeven is expected in the larger plasma confinement devices that have recently begun or are about to begin operation with the goal of demonstrating that magnetic fusion systems are scientifically feasible. The present status of research in torodial and mirror systems is reviewed. Specifically, the Tokamak, Stellarator, and Mirror Programmes are described, with a concentration on the important physics issues (heating, confinement, stability, potential formation, etc.) these programmes address. Reactor designs are undertaken to identify and address issues associated with the engineering and economic feasibility of magnetic fusion as a power source. The first generation reactors will be based on the DT fuel cycle and have electricity, fissile fuel, and high temperature heat production as design goals.

11282 **(DOE/DP/40157—1) Gas filled dynamics for laser driven fusion reactors. Final report, August 4, 1981-December 31, 1983.** Moses, G.A.; McCarville, T.J.; Peterson, R.R. (Wisconsin Univ., Madison (USA). Dept. of Nuclear Engineering). Oct 1983. Contract AS08-81DP40157. 134p. (UWFDM—458). NTIS, PC A07/MF A01. Order Number DE84005181.

Portions are illegible in microfiche products.

This report serves as documentation for the MF-FIRE computer code. This code is the same as the FIRE code described in University of Wisconsin Fusion Engineering Program Report UWFDM-407 except that a multifrequency flux limited diffusion radiative transfer option has been added. Hence this report is a reproduction of UWFDM-407 with the additional description of the multifrequency radiative transfer.

11283 **(DOE/ER—0113/2) Special-purpose materials for magnetically confined fusion reactors. Fifth annual progress report.** (USDOE Office of Energy Research, Washington, DC. Development and Technology Div.). Oct 1983. 136p. NTIS, PC A07/MF A01. Order Number DE84001531.

Separate abstracts were prepared for each of the 10 included sections. (MOW)

11284 (DOE/ER—0113/2, pp 39-42) **TRIO-01 experiment.** Clemmer, R.G. (Argonne National Lab., IL); Malecha, R.F.; Finn, P.A.; Misra, B.; Dudley, I.T.; Dyer, F.F.; Clemmer, E.D. Oct 1983. NTIS, PC A07/MF A01.

In Special-purpose materials for magnetically confined fusion reactors. Fifth annual progress report.

The objective of this work is to evaluate the potential of solid lithium ceramic materials as tritium breeding materials for D-T fusion reactors. This activity includes: (1) experimental studies on candidate solid breeder materials with regard to key chemical and physical properties and tritium release characteristics and (2) analysis and review of physiochemical and mechaniccal properties data to determine system operating limits.

11285 **(DOE/ER/53091—T9) Collisional mechanisms in D^- beam sources for MFE experiments and reactors. Technical progress report.** Coggiola, M.J.; Peterson, J.R. (SRI International, Menlo Park, CA (USA)). 4 Jan 1983. Contract AT03-80ER53091. 32p. NTIS, PC A03/MF A01. Order Number DE84005027.

Initially, this work was directed toward predicting the angular scattering in D^- beams produced from D^+ charge-transfer in alkali targets. However, the work has now been redirected to provide information on the mechanisms that govern the behavior of direct extraction D^- ion sources, with immediate emphasis on the very promising Ehlers-Leung source at Lawrence Berkeley National Laboratory. The controlling mechanisms in these sources and some aspects of their behavior are only vaguely understood, and this work is intended to answer many of these questions. Included in these are problems related to both the surface production of negative ions and electrons, as well as processes within the source plasma region that determine the characteristics of the ions and neutrals that bombard the converter surface.

11286 **(DOE/ER/53091—T10) Collisional mechanisms in D^- beam sources for MFE experiments and reactors. Progress report No. 16 for quarter ending December 31, 1983.** Coggiola, M.J.; Peterson, J.R. (SRI International, Menlo Park, CA (USA)). 4 Jan 1984. Contract AT03-80ER53091. 11p. NTIS, PC A02/MF A01. Order Number DE84004674.

We have begun a systematic study of H^-/D^- ion production from low-work function metal surfaces. Initial experiments are focussing on low energy (50 to 500 ev) H/sub i/$^+$/D/sub i/$^+$ (i=1-3) impact on both clean polycrystalline Mo and minimum work-function Mo/Cs surfaces. A new, ultra-high vacuum ion-surface scattering apparatus has been constructed for this work, and is described here. Preliminary results are presented for the measured secondary electron yields from low energy He^+, Ar^+, H^+, H_2^+, H_3^+, and Cs^+ impact on polycrystalline molybdenum between 50 eV and 1500 eV.

11287 **(EGG-M—10583) Accidental tritium release from solid breeding blankets.** Holland, D.F.; Merrill, B.J. (EG and G Idaho, Inc., Idaho Falls (USA)). 1983. Contract AC07-76ID01570. 6p. (CONF-831203—49). NTIS, PC A02/MF A01. Order Number DE84004229.

From 10. symposium on fusion engineering; Philadelphia, PA, USA (5 Dec 1983).

Vulnerability of tritium in a solid breeding material has been determined for accidents involving failure of the barrier between the blanket and reactor building. Two breeding materials were analyzed, lithium aluminate and lithium oxide. Accident scenarios included either continuation or termination of the blanket cooling and helium purge flow. The results showed that with the purge flow continued, tritium in lithium oxide is more vulnerable than in lithium aluminate. As the blanket cools after reactor shutdown, tritium is desorbed from the lithium oxide because of its temperature dependent solubility. In addition, the diffusion rate in the solid remains high enough for tritium release, even at the temperatures after shutdown. With the purge flow terminated, the rate of tritium release is limited by diffusion along purge channels to the blanket boundary.

11288 **(EGG-M—10683) Risk assessment of computer-controlled safety systems for fusion reactors.** Fryer, M.O.; Bruske, S.Z. (EG and G Idaho, Inc., Idaho Falls (USA)). 1983. Contract AC07-76ID01570. 4p. (CONF-831203—74). NTIS, PC A02/MF A01. Order Number DE84005055.

From 10. symposium on fusion engineering; Philadelphia, PA, USA (5 Dec 1983).

The complexity of fusion reactor systems and the need to display, analyze, and react promptly to large amounts of information during reactor operation will require a number of safety systems in the fusion facilities to be computer controlled. Computer software, therefore, must be included in the reactor safety analyses. Unfortunately, the science of integrating computer software into safety analyses is in its infancy. Combined plant hardware and computer software systems are often treated by making simple assumptions about software performance. This method is not acceptable for assessing risks in the complex fusion systems, and a new technique for risk assessment of combined plant hardware and computer software systems has been developed. This technique is an extension of the traditional fault tree analysis and uses structured flow charts of the software in a manner analogous to wiring or piping diagrams of hardware. The software logic determines the form of much of the fault trees.

11289 **(EGG-M—23583) Development of target capsules for muon catalyzed fusion experiments.** Watts, K.D.; Jones, S.E.; Caffrey, A.J. (EG and G Idaho, Inc., Idaho Falls (USA)). 1983. Contract AC07-76ID01570. 6p. (CONF-831203—84). NTIS, PC A02/MF A01. Order Number DE84004540.

From 10. symposium on fusion engineering; Philadelphia, PA, USA (5 Dec 1983).

A series of Muon Catalyzed Fusion experiments has been conducted at the Los Alamos Meson Physics Facility to determine how many fusion reactions one muon would catalyze under various temperature, pressure, contamination, and tritium concentration conditions. Target capsules to contain deuterium and tritium at ele-

vated temperatures and pressures were engineered for a maximum temperature of 540 K (512°F) and a maximum pressure of 103 MPa (15,000 psig). Experimental data collected with these capsules indicated that the number of fusion reactions per muon continued to increase with temperature up to the 540-K design limit. Theory had indicated that the reaction rate should peak at approximately 540 K, but this was not confirmed during the experiments. A second generation of capsules which have a maximum design temperature of 800 K (980°F) and a maximum design pressure of 103 MPa (15,000 psig) has now been engineered. These new capsules will be used to further study the muon catalysis rate versus deuterium-tritium mixture temperature.

11290 (EUR-CEA-FC—1184) Construction of force-free fields which have toroidal surfaces about a given surface. Bouligand, G. (Association Euratom-CEA, Centre d'Etudes Nucleaires de Fontenay-aux-Roses, 92 (France). Dept. de Recherches sur la Fusion Controlee). May 1983. 54p. (In French). NTIS (US Sales Only), PC A04/MF A01. Order Number DE84750336.

A study of two-fields (B vector, rotB vector) of conservative flux which admits a family of toroidal surfaces of parameter phi on a domain limited by a given surface S, suggests their construction by a Cauchy-Arzela method of step by step. Taking into account the Newcomb condition this method is consistent with force-free magnetic fields and with helical equilibria with scalar pressure. The method supposes that B vector is of class C^1. This construction makes use of the remarkable property of the field B vector to be the surface gradient of a generating multivalued function Q on a closed surface. Consequently, the initial surface will be given with its normal metric coefficient K; that is to say, B vector admits a family F of homotopic surfaces on a infinitesimal domain about S, an element of F. From this, the periodic part of Q is a solution of a Beltrami equation for the flux conservation of which numerical resolution is envisaged. The study of these fields is made in a biorthogonal system of coordinates. The coeffficients of the two fundamental metric forms of magnetic surfaces vary with phi and are interrelated by a sixth order differential system of equations which gives their variation.

11291 (GA-A—16844) Neutron streaming through diagnostic penetrations in a fusion reactor shield. Engholm, B.A.; Battaglia, J.M.; Baur, J.F. (GA Technologies, Inc., San Diego, CA (USA)). May 1983. Contract AT03-76ET51011. 80p. NTIS, PC A05/MF A01. Order Number DE84005323.

Portions are illegible in microfiche products. Original copy available until stock is exhausted.

Monte Carlo calculations of neutron fluxes were made for several types of diagnostic penetrations in a realistic fusion reactor shield, and the results compared with classical streaming theory. Calculations and theory agreed well in straight penetrations, but calculated neutron transport in penetrations with elbows was higher than predicted by theory.

11292 (GA-A—17010) Cavity launchers for ICRF. Chiu, S.C.; Parks, P.; Perkins, F.W.; Rawls, J.W. (GA Technologies, Inc., San Diego, CA (USA); Princeton Univ., NJ (USA)). Aug 1983. Contract AT03-76ET51011. 8p. (CONF-830210—21). NTIS, PC A02/MF A01. Order Number DE84004892.

From 5. topical conference on radio frequency plasma heating; Madison, WI, USA (21 Feb 1983).

A type of resonant coil cavity is analyzed as a launcher for ICRF. This approach offers the advantages of: (1) convenient and flexible sizing, (2) ease of operation and maintenance, and (3) high power handling capability. We present results for resonance conditions, mode structures, power handling capabilities, and sensitivity to variation in plasma parameters.

11293 (HEDL—7408) Comparison of activation in STARFIRE and MARS first-walls. Heinisch, H.L.; Mann, F.M. (Hanford Engineering Development Lab., Richland, WA (USA)). 1983. Contract AC06-76FF02170. 6p. NTIS, PC A02/MF A01. Order Number DE84004940.

Activation calculations were performed for elements in the MARS and STARFIRE first-wall positions. The seven elements considered (N, Al, Ni, Mo, Cu, Nb, Pb) are these which were found from earlier STARFIRE calculations to require restrictions in order to meet NRC disposal regulations. The importance of the neutron spectrum is demonstrated by a comparison of MARS and STARFIRE results. In the harder spectrum of the MARS first-wall the same elements face restrictions, but for Ni, Mo and Nb the allowable limits are two to five times larger than in STARFIRE.

11294 (HEDL-SA—2925-FP) Development of a large lithium coolant system for operation under vacuum. Kolowith, R.; Schwartz, K.E.; Meadows, G.E.; Berg, J.D. (Hanford Engineering Development Lab., Richland, WA (USA)). Nov 1983. Contract AC06-76FF02170. 7p. (CONF-831203—52). NTIS, PC A02/MF A01. Order Number DE84004825.

From 10. symposium on fusion engineering; Philadelphia, PA, USA (5 Dec 1983).

Argon and vacuum systems for the Experimental Lithium System (ELS) were tested to demonstrate vacuum-break capability, vacuum pumping performance, and vacuum sensor compatibility with a hostile liquid metal vapor/aerosol environment. Mechanical, diffusion and cryogenic vacuum pumps were evaluated. High-vacuum levels in the 10^{-3} Pa range were achieved over a 270°C flowing lithium system. Ionization, thermal conductivity, capacitance manometer, and compound-type pressure sensors were evaluated to determine the effects of this potentially deleterious environment. Screening elbows were evaluated as pressure sensor protective devices. A dual-purpose vacuum-level/nitrogen partial-pressure sensor was evaluated as a means of detecting air in-leakage. Several types of static mechanical vacuum seals were also evaluated. Measurements of the vapor/aerosol generation were made at several system locations and operating conditions.

11295 (IAE—3535/6) Effect of a field structure on the particle behaviour in magnetic traps. Orthogonality condition. Panov, D.A. (Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow. Inst. Atomnoj Ehnergii). 1982. 28p. (In Russian). NTIS (US Sales Only), PC A03/MF A01. Order Number DE83704455.

Non-contribution to and splitting of charged particle drift surfaces in a field of the general type are shown to be specified by the violation of the mutual orthogonality of lines B = const (where B the magnetic field modulus) and the field force lines on the magnetic surfaces. Attention is drawn to the impossibility of aligning the electron- and ion drift shells in the magnetic configurations with the non-orthogonal geometry of the field. The drift shells splitting is shown to be accompanied by generation of a magnetic field lateral to the vacuum field. The lateral field is comparable with the diamagnetic field in the order of magnitude. The field orthogonality condition, invariant with regard to selecting co-ordinates, is obtained, with the differentiation being performed along the directions of a force line and a line binormal to it. The structure of averaged and split drift surfaces with violation of the field geometry orthogonality is studied for a final anisotropic plasma pressure, the latter being considered as preset and satisfying the equilibrium conditions. Some consequences of violation of the field geometry orthogonality are considered that affect the conditions of the plasma MHD-equilibrium and maintaining its quasi-neutrality.

11296 (INIS-mf—8473, pp 106-112) Varennes Tokamak. Cumyn, P.B. (Canatom Ltd., Montreal, Quebec (Canada)). [nd]. NTIS (US Sales Only), PC A19/MF A01. (CONF-8106200—Pt.1).

From 21. annual international conference of Canadian Nuclear Association and 2. annual conference of Canadian Nuclear Society; Ottawa, Canada (8 Jun 1981).

A consortium of five organizations under the leadership of IREQ, the Institute de Recherche d'Hydro-Quebec has completed a conceptual design study for a tokamak device, and in January 1981 its construction was authorized with funding being provided principally by Hydro-Quebec and the National Research Council, as well as by the Ministre d'Education du Quebec and Natural Sciences and Engineering Research Council of Canada (NSERC). The device will form the focus of Canada's magnetic-fusion program and will be located in IREQ's laboratories in Varennes. Presently the machine layout is being finalized from the physics point of view

and work has started on equipment design and specification. The Tokamak de Varennes will be an experimental device, the purpose of which is to study plasma and other fusion related phenomena. In particular it will study: 1. Plasma impurities and plasma/liner interaction; 2. Long pulse or quasi-continuous operation using plasma rampdown and eventually plasma current reversal in order to maintain the plasma; and 3. Advanced diagnostics.

11314 (KFKI—1983-12) Self-focusing of laser beam crossing a laser plasma. Bakos, J.S.; Foeldes, I.B.; Ignacz, P.N.; Soerlei, Zs. (Hungarian Academy of Sciences, Budapest. Central Research Inst. for Physics). Mar 1983. 10p. NTIS (US Sales Only), PC A02/MF A01. Order Number DE83704456.

A crossed-beam experiment was performed to clarify the mechanism of self-focusing in a laser produced spark. The plasma was created by one beam and self-focusing was observed in the weak probe beam which crossed the plasma. Experimental results show that the cause of self-focusing is the nonuniform heating mechanism.

11315 (KFKI—1983-50) Self-focusing in laser produced spark. Bakos, J.S.; Foeldes, I.B. (Hungarian Academy of Sciences, Budapest. Central Research Inst. for Physics). May 1983. 14p. NTIS (US Sales Only), PC A02/MF A01. Order Number DE83704457.

The self-focusing effect appearing in different phases of development of laser produced breakdown plasma in air is investigated. Self-focusing during the ionization process is demonstrated. Thermal self-focusing was observed in the later stage of the plasma development at moderate light intensities. Plasma development was investigated by forward and side scattering of the laser light in the plasma. A crossed beam experiment gave evidence of the thermal mechanism of self-focusing.

From Chapman conference on magnetic reconnection; Los Alamos, NM, USA (3 Oct 1983).

Portions are illegible in microfiche products.

The equation of zero-beta, hydromagnetic equilibrium: del x B = lambda B, which has long been of interest to astrophysicists, has recently become of interest to fusion physicists as a result of its ability to describe the gross features of the magnetic field configurations of finite-beta reversed-field-pinch and spheromak discharges. Not only does the equation describe the state of minimum magnetic energy for a fixed magnetic flux and magnetic helicity, but also it describes the mean magnetic field of an absolute equilibrium ensemble with magnetic energy, magnetic helicity, and magnetic flux constraints. Because of its utility, we have recently solved it analytically for two cylindrically symmetric configurations: (1) a circular cylinder of radius r_0 and length L whose side and endplates are perfectly conducting, except for infinitesimal ports at the center of each endplate that permit a finite magnetic flux to enter and leave the cylinder's interior, and (2) a circular cylinder of radius r_0 and length L whose side and endplates are perfectly conducting, except for one endplate that has both an infinitesimal port at its center that permits magnetic flux to enter the cylinder's interior and a concentric, circular, infinitesimal slit of radius a that permits the flux to exit.

11317 (LA-UR—83-3470) Development of CO_2 and KrF gas lasers as drivers for inertial confinement fusion. Rockwood, S.D. (Los Alamos National Lab., NM (USA)). 1983. Contract W-7405-ENG-36. 16p. (CONF-831203—44). NTIS, PC A02/MF A01. Order Number DE84004329.

From 10. symposium on fusion engineering; Philadelphia, PA, USA (5 Dec 1983).

Portions are illegible in microfiche products.

Several different driver systems are currently under development in the national ICF program. Los Alamos has traditionally emphasized gas laser systems because of their intrinsic high average power capability and ease of operation. This paper will review the status of activities in both carbon dioxide (CO_2) and krypton fluoride (KrF) development at the Laboratory.

11318 (LA-UR—83-3476) Poloidal field system design for the ZT-H reversed field pinch experiment. Schoenberg, K.F.; Gribble, R.F.; Linton, T.W.; Reass, W.R. (Los Alamos National Lab., NM (USA)). 1983. Contract W-7405-ENG-36. 7p. (CONF-831203—43). NTIS, PC A02/MF A01. Order Number DE84004328.

From 10. symposium on fusion engineering; Philadelphia, PA, USA (5 Dec 1983).

Portions are illegible in microfiche products.

This report discusses each of the following areas: (1) equilibrium specification, (2) the equilibrium winding, (3) the magnetizing winding, (4) numerical poloidal field system analysis, (5) coil cross section, turns, minimum field error, (6) coil stresses and cooling, (7) the upper structure, (8) the loads, (9) boundary conditions and method of analysis, and (10) design description. (MOW)

11319 (LA-UR—83-3489) Toroidal magnetic field system for a 2-MA reversed-field pinch experiment. Melton, J.G.; Linton, T.W. (Los Alamos National Lab., NM (USA)). 1983. Contract W-7405-ENG-36. 7p. (CONF-831203—45). NTIS, PC A02/MF A01. Order Number DE84004322.

From 10. symposium on fusion engineering; Philadelphia, PA, USA (5 Dec 1983).

Portions are illegible in microfiche products.

The engineering design of the toroidal magnetic field (TF) system for a 2-MA Reversed-Field Pinch experiment (ZT-H) is described. ZT-H is designed with major radius 2.15 meters, minor radius 0.40 meters, and a peak toroidal magnetic field of 0.85 Tesla. The requirement for highly uniform fields, with spatial ripple $<0.2\%$ leads to a design with 72 equally spaced circular TF coils, located at minor radius 0.6 meters, carrying a maximum current of 9.0 MA. The coils are driven by a 12-MJ capacitor bank which is allowed to ring in order to aid the reversal of magnetic field. A stress analysis is presented, based upon calculated hoop tension, centering force, and overturning moment, treating these as a combination of static loads and considering that the periodic nature of the loading causes little amplification. The load transfer of forces and moments is considered as a stress distribution resisted by the coils, support structures, wedges, and the structural shell.

11320 (LA-UR—83-3490) Electrical design of a high current density air-core reversed-field pinch ZTP. Reass, W.A.; Melton, J.G.; Gribble, R.F. (Los Alamos National Lab., NM (USA)). 1983. Contract W-7405-ENG-36. 5p. (CONF-831203—46). NTIS, PC A02/MF A01. Order Number DE84004321.

From 10. symposium on fusion engineering; Philadelphia, PA, USA (5 Dec 1983).

Portions are illegible in microfiche products.

This paper describes the electrical design of a small, high current density (10 MA/m^2) toroidal reversed-field Z-Pinch (RFP) presently being constructed at Los Alamos. Special purpose magnetic field programs were used to calculate self and mutual inductances for the poloidal field windings. The network analysis program MINI-SCEPTRE was then used to predict plasma current, including the interaction between toroidal and poloidal field circuits, as described by the Bessel function model for RFP's. Using these programs, coil geometry was obtained for minimal field errors and the pulse power systems were optimized to minimize equilibrium control power. Results of computer modeling and implementation of the electrical circuits are presented.

11321 (LA-UR—83-3505) Plasma engineering design of a compact reversed-field pinch reactor (CRFPR). Bathke, C.G.; Embrechts, M.J.; Hagenson, R.L.; Krakowski, R.A.; Miller, R.L. (Los Alamos National Lab., NM (USA)). 1983. Contract W-7405-ENG-36. 9p. (CONF-831203—47). NTIS, PC A02/MF A01. Order Number DE84004334.

From 10. symposium on fusion engineering; Philadelphia, PA, USA (5 Dec 1983).

Portions are illegible in microfiche products.

The rationale for and the characteristics of the high-power-density Compact Reversed-Field Pinch Reactor (CRFPR) are discussed. Particular emphasis is given to key plasma engineering aspects of the conceptual design, including plasma operations, current drive, and impurity/ash control by means of pumped limiters or magnetic divertors. A brief description of the Fusion-Power-Core integration is given.

11322 **(LBL—16833) Formation of H^- by charge transfer in alkaline-earth vapors.** Schlachter, A.S.; Morgan, T.J. (Lawrence Berkeley Lab., CA (USA); Wesleyan Univ., Middletown, CT (USA)). Oct 1983. Contract AC03-76SF00098;AC02-76ET53048. 14p. (CONF-831180—15). NTIS, PC A02/MF A01. Order Number DE84004346.

From 3. international symposium on the production and neutralization of negative ions and beams; Upton, NY, USA (14 Nov 1983).

Portions are illegible in microfiche products.

Progress on the study of H^- formation by charge transfer in alkaline-earth vapors is reported. The H^- equilibrium yield in strontium vapor reaches a maximum of 50% at an energy of 250 eV/amu, which is the highest H^- yield reported to date.

11323 **(LBL—16903) H^- production from different metallic converter surfaces.** Leung, K.N.; Ehlers, K.W. (Lawrence Berkeley Lab., CA (USA)). Nov 1983. Contract AC03-76SF00098. 10p. (CONF-831180—13). NTIS, PC A02/MF A01. Order Number DE84004345.

From 3. international symposium on the production and neutralization of negative ions and beams; Upton, NY, USA (14 Nov 1983).

The relative yield of H^- ions generated from various metallic surfaces (such as Mo, Ti, V, Nb, Pt, Pd, Rh, Cu, Ta, Al, Au and stainless steel) are compared in a multicusp source with and without the presence of cesium. Result of the investigation shows that one can optimize the H^- yield and formation process by choosing the proper converter material for a given range of source operating conditions.

11324 **(LBL—16939) Considerations involved in the design of negative-ion-based neutral beam systems.** Cooper, W.S. (Lawrence Berkeley Lab., CA (USA)). Nov 1983. Contract AC03-76SF00098. 13p. (CONF-831180—14). NTIS, PC A02/MF A01. Order Number DE84004241.

From 3. international symposium on the production and neutralization of negative ions and beams; Upton, NY, USA (14 Nov 1983).

We consider the requirements and constraints for negative-ion-based neutral beam injection systems, and show how these are reflected in design considerations. We will attempt to develop a set of guidelines for users and developers to use to see how well (in a qualitative sense, at least) a particular neutral beam system fits a particular proposed need.

11325 **(PFC/RR—83-08) Modeling of lithium and lithium-lead reactions in air using LITFIRE.** Gilberti, V.J.; Kazimi, M.S. (Massachusetts Inst. of Tech., Cambridge (USA)). Jan 1983. Contract AP07-79ID00019. 171p. NTIS, PC A08/MF A01. Order Number DE84004764.

Portions are illegible in microfiche products.

LITFIRE is a computer code that simulates the combustion of lithium in various containment schemes. The accuracy of LITFIRE in predicting thermal and pressure responses of containment atmosphere and structures has been tested against small scale (100 kg. Li) spills performed at the Hanford Engineering Development Laboratory. The agreement between experiment and LITFIRE prediction was within 10%. Application of LITFIRE to fires in a prototypical fusion reactor was made. The predictions of LITFIRE indicate that fires limited to the torus of a tokamak fusion reactor would be much less severe than fires resulting from spills directly onto the containment building floor. However, the primary wall and surrounding structures would become hotter in spills inside the torus because they are directly exposed to radiative heating by the fire.

11326 **(PPPL—2038) Analytic representation of three-dimensional stellarator field.** Yoshikawa, S. (Princeton Univ., NJ (USA). Plasma Physics Lab.). Sep 1983. Contract AC02-76CH03073. 11p. (CONF-831105—6). NTIS, PC A02/MF A01. Order Number DE84000535.

From Meeting of the Plasma Physics Division of the American Physical Society; Los Angeles, CA, USA (7 Nov 1983).

The stellarator configuration can be greatly simplified when toroidal harmonics are introduced. The toroidal function satisfies Laplace's equation and together with toroidal field and vertical field, a small-aspect-ratio stellarator can be constructed with an aspect ratio as low as 3.6. This functional presentation suggests a very fast computation of particle orbits and magnetic configuration.

11327 **(PPPL—2051) TFTR initial operations.** Young, K.M.; Bell, M.; Blanchard, W.R.; Bretz, N.; Cecchi, J.; Coonrod, J.; Davis, S.; Dylla, H.F.; Efthimion, P.C.; Fonck, R. (Princeton Univ., NJ (USA). Plasma Physics Lab.). Nov 1983. Contract AC02-76CH03073. 35p. NTIS, PC A03/MF A01. Order Number DE84004302.

The Tokamak Fusion Test Reactor (TFTR) has operated since December 1982 with ohmically heated plasmas. Routine operation with feedback control of plasma current, position, and density has been obtained for plasmas with I/sub p/ $\simeq$ 800 kA, a = 68 cm, R = 250 cm, and B/sub t/ = 27 kG. A maximum plasma current of 1 MA was achieved with q $\simeq$ 2.5. Energy confinement times of $\sim$ 150 msec were measured for hydrogen and deuterium plasmas with anti n/sub e/ $\simeq 2 \times 10^{13}$ cm^{-3}, T/sub e/ (0) $\simeq$ 1.5 keV, T/sub i/ (0) $\simeq$ 1.5 keV, and Z/sub eff/ $\simeq$ 3. The preliminary results suggest a size-cubed scaling from PLT and are consistent with Alcator C scaling where tau $\sim nR^2a$. Initial measurements of plasma disruption characteristics indicate current decay rates of $\sim$ 800 kA in 8 ms which is within the TFTR design requirement of 3 MA in 3 ms.

11328 **(PPPL—2062) Island formation and destruction of flux surfaces in three-dimensional MHD equilibria.** Reiman, A.H.; Boozer, A.H. (Princeton Univ., NJ (USA). Plasma Physics Lab.). Nov 1983. Contract AC02-76CH03073. 32p. NTIS, PC A03/MF A01. Order Number DE84004297.

We describe the physics involved in the appearance of islands due to resonant pressure driven currents in three-dimensional MHD equilibria. Estimates of island widths are obtained by an expansion in β. The theory is applied to Princeton's heliac reference design.

11329 **(SAAS—303) Techniques for radiation protection monitoring of personnel at fusion reactors.** Schuricht, V. (Staatliches Amt fuer Atomsicherheit und Strahlenschutz, Berlin (German Democratic Republic)). 1983. 18p. NTIS (US Sales Only), PC A02/MF A01. Order Number DE83704327.

The radiation sources and fields likely to be encountered in future nuclear fusion plants are discussed in respect to the resulting requirements for personnel monitoring. Although large inventories of radioactive substances and very intensive neutron fields would be present in such plants, only some special aspects need to be observed in radiation monitoring measurements. Further development of fusion technology will presumably render possible a 'clean' energy production which does not require extensive radiation protection measures.

11330 **(SAI—83/1193) Tandem mirror coil optimization studies.** Francis, G.L.; D'Ippolito, D.A.; Myra, J.R. (Science Applications, Inc., Boulder, CO (USA). Plasma Research Inst.). Nov 1983. Contract AC03-76ET53057. 39p. NTIS, PC A03/MF A01. Order Number DE84005394.

A recently developed numerical algorithm for optimizing quadrupole magnetic coil systems is applied to the tandem mirror design problems. By adjusting filamentary coil shapes, the magnetic field structure minimizing radial particle transport is found, subject to a stability constraint. Two configurations are examined: a MARS-like reactor design and an unconventional TMX-like system with a non-axisymmetric central cell. In the latter case, a number of nearly omnigenous geometries with various stability properties are investigated.

11331 **(UCID—19948) Flow visualizations, velocity measurements, and surface convection measurements in simulated 20.8-cm Nova box amplifier cavities.** Julien, J.L.; Molishever, E.L. (Lawrence Livermore National Lab., CA (USA)). 31 Oct 1983. Contract W-7405-ENG-48. 75p. NTIS, PC A04/MF A01. Order Number DE84004354.

Portions are illegible in microfiche products. Original copy available until stock is exhausted.

Reported are fluid mechanics experiments performed in models of the 20.8-cm Nova amplifier lamp and disk cavities. Lamp cavity nitrogen flows are shown, by both flow visualization and velocity measurements, to be acceptably uniform and parallel to the flashlamps. In contrast, the nitrogen flows in the disk cavity are shown to be disordered. Even though disk cavity flows are disordered, the simplest of three proposed nitrogen introduction systems for the disk cavity was found to be acceptable based on convection measurements made at the surfaces of simulated laser disks.

11332 **(UCRL—15565) Seismic review of vault for MFTF upgrade project.** Franklin, H.A. (Lawrence Livermore National Lab., CA (USA)). 29 Sep 1983. Contract W-7405-ENG-48. 18p. NTIS, PC A02/MF A01. Order Number DE84004188.

Portions are illegible in microfiche products.

This letter report was prepared in accordance with the scope of work for the preconceptual seismic evaluation of the (α + T) Tandem Mirror Fusion Machine concrete vault. The scope of the work was developed with the assistance of the Bechtel site representative Dr. Sunil Ghose. The report contains comments and preconceptual recommendations on wall upgrading for an 150-ton crane installation, concrete vault seismic capability for (α + T) conditions, and recommendations for future work.

11333 **(UCRL—15571) Pressure drop considerations of a lithium cooled fusion breeder tokamak reactor blanket.** Wong, C.P.C. (Lawrence Livermore National Lab., CA (USA)). 6 Dec 1983. Contract W-7405-ENG-48. 13p. NTIS, PC A02/MF A01. Order Number DE84004805.

Liquid lithium was selected as one of the coolants for the 1983 fusion breeder blanket used on the magnetically confined tokamak fusion reactor, and as a result, the thermal-hydraulic calculations were dominated by magnetohydrodynamic (MHD) considerations. The applicable sets of MHD equations for the engineering thermal-hydraulic design were reviewed and compared. Special attention was given to the MHD calculations for the fertile material zone, a packed bed of composite beryllium and thorium balls, since this region can dominate the thermal-hydraulic behavior of this blanket module. To keep the pressure drops acceptable, fertile fuel balls were omitted in the inboard blanket.

11334 **(UCRL—89285) Calculation of density profiles in tandem mirrors fueled by pellets.** Campbell, R.B.; Gilmore, J.M. (Lawrence Livermore National Lab., CA (USA)). 2 Dec 1983. Contract W-7405-ENG-48. 7p. (CONF-831203—51). NTIS, PC A02/MF A01. Order Number DE84004079.

From 10. symposium on fusion engineering; Philadelphia, PA, USA (5 Dec 1983).

Portions are illegible in microfiche products.

We have modified the LLNL radial transport code TMT to model reactor regime plasmas, fueled by pellets. The source profiles arising from pellet fueling are obtained from existing pellet ablation models. Because inward radial diffusion due to inverted profiles must compete with trapping of central cell ions in the transition region for tandem mirrors, pellets must penetrate fairly far into the plasma. In fact, based on our radial calculations, a pellet with a velocity of 10 km/sec cannot sustain the central flux tubes; a velocity more like 100 km/sec will be necessary. We also find that the central cell radial diffusion must exceed classical by about a factor of 100.

11335 **(UCRL—89433) Volume generation of negative ions in high density hydrogen discharges.** Hiskes, J.R.; Karo, A.M. (Lawrence Livermore National Lab., CA (USA)). 1 Jul 1983. Contract W-7405-ENG-48. 5p. (CONF-830920—11). NTIS, PC A02/MF A01. Order Number DE84004793.

From 7. symposium on sources and ion assisted technology and 4. international conference on ion and plasma assisted techniques; Kyoto, Japan (12 Sep 1983).

A parametric survey is made of a high-density tandem two-chamber hydrogen negative ion system. The optimum extracted negative ion current densities are sensitive to the atom concentration in the discharge and to the system scale length. For scale lengths ranging from 10 cm to 0.1 cm optimum current densities range from of order 1 to 100 mA cm^{-2}, respectively.

11336 **(UCRL—89726) Generation of H^-, D^- ions on composite surfaces with application to surface/plasma ion source systems.** Hiskes, J.R.; Karo, A.M.; Wimmer, E.; Freeman, A.J.; Chubb, S.R. (Lawrence Livermore National Lab., CA (USA); Northwestern Univ., Evanston, IL (USA)). 19 Aug 1983. Contract W-7405-ENG-48. 23p. (CONF-831171—18). NTIS, PC A02/MF A01. Order Number DE84004814.

From American Vacuum Society meeting; Boston, MA, USA (1 Nov 1983).

We review some salient features of the experimental and theoretical data pertaining to hydrogen negative ion generation on minimum-work-function composite surfaces consisting of Cs/transition metal substrates. Cesium or hydrogen ion bombardment of a cesium-activated negatively-biased electrode exposed to a cesium-hydrogen discharge results in the release of hydrogen negative ions. These ions originate through desorbtion of hydrogen particles by incident cesium ions, desorbtion by incident hydrogen ions, and by backscattering of incident hydrogen. Each process is characterized by a specific energy and angular distribution. The calculation of ion formation in the crystal selvage region is discussed for different approximations to the surface potential. An ab initio, all-electron, local density functional model for the composite surface electronics is discussed.

11337 **(UCRL—89759) NOVA laser facility for inertial confinement fusion.** Simmons, W.W. (Lawrence Livermore National Lab., CA (USA)). 30 Nov 1983. Contract W-7405-ENG-48. 7p. (CONF-831203—71). NTIS, PC A02/MF A01. Order Number DE84004190.

From 10. symposium on fusion engineering; Philadelphia, PA, USA (5 Dec 1983).

Portions are illegible in microfiche products.

The NOVA laser consists of ten beams, capable of concentrating 100 to 150 kJ of energy (in 3 ns) and 100 to 150 TW of power (in 100 ps) on experimental targets by 1985. NOVA will also be capable of frequency converting the fundamental laser wavelength (1.05 μm) to its second (0.525 μm) or third (0.35 μm) harmonic. This additional capability (80 to 120 kJ at 0.525 μm, 40 to 70 kJ at 0.35 μm) was approved by the US Department of Energy (DOE) in April 1982. These shorter wavelengths are much more favorable for ICF target physics. Current construction status of the NOVA facility, intended for completion in the autumn of 1984, will be presented.

11338 **(UCRL—89987) MFTF-B quasi-optical ECRH transmission system.** Yugo, J.J.; Shearer, J.W.; Ziolkowski, R.W. (Lawrence Livermore National Lab., CA (USA)). 7 Nov 1983. Contract W-7405-ENG-48. 6p. (CONF-831105—5). NTIS, PC A02/MF A01. Order Number DE84004792.

From Meeting of the Plasma Physics Division of the American Physical Society; Los Angeles, CA, USA (7 Nov 1983).

The microwave transmission system for ERCH on MFTF-B will utilize quasi-optical transmission techniques. The system consists of ten gyrotron oscillators: two gyrotrons at 28 GHz, two at 35 GHz, and six at 56 GHz. The 28 and 35 GHz gyrotrons both heat the electrons in the end plug (potential peak) while the 56 GHz sources heat the minimum-B anchor region (potential minimum). Microwaves are launched into a pair of cylindrical mirrors that form a pseudo-cavity which directs the microwaves through the plasma numerous times before they are lost out of the cavity. The cavity allows the microwave beam to reach the resonance zone over a wide range of plasma densities and temperatures. The fundamental electron cyclotron resonance moves to higher axial positions as a result of beta-depression of the magnetic field, doppler shifting of the resonance, and relativistic mass corrections for the electrons. With this system the microwave beam will reach the resonance surface at the correct angle of incidence for any density or temperature without active aiming of the antennas. The cavity also allows the beam to make multiple passes through the plasma to increase the heating efficiency at low temperatures and densities when the single pass absorption is low. In addition, neutral beams and diagnostics have an unobstructed view of the plasma.

11339 **(UCRL—90059) Radiation-induced electrical breakdown of helium in fusion reactor superconducting magnet systems.** Perkins, L.J. (Lawrence Livermore National Lab., CA (USA)). 2 Dec 1983. Contract W-7405-ENG-48. 7p. (CONF-831203—54). NTIS, PC A02/MF A01. Order Number DE84004359.

From 10. symposium on fusion engineering; Philadelphia, PA, USA (5 Dec 1983).

A comprehensive theoretical study has been performed on the reduction of the electrical breakdown potential of liquid and gaseous helium under neutron and gamma radiation. Extension of the conventional Townsend breakdown theory indicates that radiation fields at the superconducting magnets of a typical fusion reactor are potentially capable of significantly reducing currently established (i.e., unirradiated) helium breakdown voltages. Emphasis is given to the implications of these results including future deployment choices of magnet cryogenic methods (e.g., pool-boiling versus forced-flow), the possible impact on magnet shielding requirements and the analogous situation for radiation-induced electrical breakdown in fusion RF transmission systems.

11340 **(UCRL—90092) Superconducting (radiation hardened) magnets for mirror fusion devices.** Henning, C.D.; Dalder, E.N.C.; Miller, J.R.; Perkins, J.R. (Lawrence Livermore National Lab., CA (USA)). 7 Dec 1983. Contract W-7405-ENG-48. 9p. (CONF-831203—53). NTIS, PC A02/MF A01. Order Number DE84004076.

From 10. symposium on fusion engineering; Philadelphia, PA, USA (5 Dec 1983).

Superconducting magnets for mirror fusion have evolved considerably since the Baseball II magnet in 1970. Recently, the Mirror Fusion Test Facility (MFTF-B) yin-yang has been tested to a full field of 7.7 T with radial dimensions representative of a full scale reactor. Now the emphasis has turned to the manufacture of very high field solenoids (choke coils) that are placed between the tandem mirror central cell and the yin-yang anchor-plug set. For MFTF-B the choke coil field reaches 12 T, while in future devices like the MFTF-Upgrade, Fusion Power Demonstration and Mirror Advanced Reactor Study (MARS) reactor the fields are doubled. Besides developing high fields, the magnets must be radiation hardened. Otherwise, thick neutron shields increase the magnet size to an unacceptable weight and cost. Neutron fluences in superconducting magnets must be increased by an order of magnitude or more. Insulators must withstand 10^{10} to 10^{11} rads, while magnet stability must be retained after the copper has been exposed to fluence above 10^{19} neutrons/cm^2.

11341 **(UCRL—90109) Reconnection in Spheromak formation and sustainment.** Hammer, J.H. (Lawrence Livermore National Lab., CA (USA)). 12 Dec 1983. Contract W-7405-ENG-48. 36p. (CONF-8310229—4). NTIS, PC A03/MF A01. Order Number DE84004157.

From Chapman conference on magnetic reconnection; Los Alamos, NM, USA (3 Oct 1983).

Portions are illegible in microfiche products.

The Spheromak is a magnetic confinement device that is being explored in both the US and Japanese fusion programs. It is a member of the Compact Torus family of magnetic structures characterized by a set of closed, nested toroidal flux surfaces but without any coils, transformer cores, etc. protruding through the hole in the torus. The Speromak is closely elated to the Reversed Field Pinch (RFP) in that most of the magnetic field is produced by plasma currents flowing along the magnetic field lines (a near force free field) rather than by external coils. The Spheromak has magnetic field components of comparable strength in both the toroidal (azimuthal) and poloidal (in the plane perpendicular to the azimuthal unit vector) directions. The large internal magnetic energy in the Spheromak makes it rich in magnetohydrodynamic phenomena and reconnection, in particular, plays an important role in the formation, resistive decay and instability processes.

11342 **Experimental investigation of muon-catalyzed d-t fusion.** Jones, S.E.; Anderson, A.N.; Caffrey, A.J.; Walter, J.B.; Watts, K.D.; Bradbury, J.N.; Gram, P.A.M.; Leon, M.; Maltrud, H.R.; Paciotti, M.A. (Idaho National Engineering Laboratory, Idaho Falls, Idaho 83415). *Physical Review Letters;* **51**: No. 19, 1757-1760(7 Nov 1983). Contract AC07-76ID01570;W-7405-ENG-36.

Measurements of the absolute neutron yield and the time dependence of the appearance of neutrons resulting from muon-catalyzed fusion have been carried out in high-density deuterium-tritium mixtures. The temperature dependence of the resonant dtμ-molecular formation process has been determined in the range 100 to 540 K. Mesomolecular formation is found to be resonant for DT as well as D_2 target molecules. The sticking probability and other fundamental parameters have been measured for the first time.

11343 **Scaling and electron penetration in slab plasmas.** Wienke, B.R. (Los Alamos National Laboratory, P.O. Box 1663, Los Alamos, NM 87545). *Transactions of the American Nuclear Society;* **44**: 128-130(Jun 1983). (CONF-830609—).

From ANS annual meeting; Detroit, MI, USA (12 Jun 1983).

11344 **Tritium diffusion in lithium oxide solid breeder materials.** Shearer, J.A.; Johnson, C.E.; Tam, S.W. (Argonne National Laboratory, 9700 S. Cass Avenue, Argonne, IL 60439). *Transactions of the American Nuclear Society;* **44**: 139-140(Jun 1983). (CONF-830609—).

From ANS annual meeting; Detroit, MI, USA (12 Jun 1983).

11345 **Blanket neutronics of a compact reversed-field pinch reactor.** Battat, M.E.; Krakowski, R.A.; LaBauve, R.J. (Los Alamos National Laboratory, P.O. Box 1663, Los Alamos, NM 87545). *Transactions of the American Nuclear Society;* **44**: 147-149(Jun 1983). (CONF-830609—).

From ANS annual meeting; Detroit, MI, USA (12 Jun 1983).

11346 **Effect of polarized fusion on the neutronics of a mirror fusion reactor.** Takahashi, H.; Lazareth, O.W. (Brookhaven National Laboratory, Upton, NY 11973). *Transactions of the American Nuclear Society;* **44**: 149-151(Jun 1983). (CONF-830609—).

From ANS annual meeting; Detroit, MI, USA (12 Jun 1983).

11347 **Nuclear data requirements for fusion reactors.** Abdou, M.A. (Argonne National Laboratory, 9700 S. Cass Avenue, Argonne, IL 60439). *Transactions of the American Nuclear Society;* **44**: 186-188(Jun 1983). (CONF-830609—).

From ANS annual meeting; Detroit, MI, USA (12 Jun 1983).

11348 **IPP: Jahresbericht 1982. (IPP: Annual report 1982).** Garching, Germany, F.R.; Max-Planck-Institut fuer Plasmaphysik (1982). 520-524p. (In German). Available from Max-Planck-Institut fuer Plasmaphysik, Garching (Germany, F.R.).

This report presents a detailed outline of the work accomplished within the framework of the Tokamak projects ASDEX and ASDEX Upgrade and the JET and NET projects, the stellarator projects VIII-A, VII-AS and VII-X, and of stellarator reactor system studies. The various scientific research departments, such as Experimental Plasma Physics 1, 2 and 3, Theoretical Plasma Physics 1 and 2, Plasma-Wall. Interactions, and Information Sciences give an account of the results of their research and development work. Further reports on the 1982 activities deal with a) the organisational structure of the IPP, b) administrative and business items, c) scientific publications and conference proceedings, and with d) IPP-supported projects at universities.

11349 **Studies of neutral beam power loss in stray magnetic fields.** Stewart, L.D. (Exxon Nuclear Co., Princeton Plasma Physics Lab.). *IEEE (Institute of Electrical and Electronics Engineers) Transactions on Nuclear Science;* **NS-28**: No. 2, 1323-1325(Apr 1981). (CONF-801111—).

From 6. conference on application of accelerators in research and industry; Denton, TX, USA (3 Nov 1980).

Reionization losses in neutral beams for magnetic confinement devices are significant and thus they are an important design consideration. This paper presents an overview of the analyses and data of the past ten years. Included is the traditional analysis, or Classical Effect, which considers the ion source and neutralizer as gas sources; the Culham Effect, which considers gas molecules knocked from walls as a significant additional gas source; and the PLT effect, which suggests wall outgassing is a significant additional gas source.

11350 **Tandem mirror reactor with an inherent thermal barrier.** Kammash, T.; Galbraith, D.L. (Michigan Univ., Ann Arbor (USA)). pp 1135-1140 of Fusion technology 1980. Vol. 2. Oxford, England; Pergamon Press (1981). (CONF-800950—Vols.1,2; EUR—7035).

From 11. symposium on fusion technology; Oxford, UK (15 Sep 1980).

In two volumes.

The Basic Tandem Mirror Configuration is evaluated as a reactor allowing for unequal plug and central-cell electron temperatures as means of simulating the effect of a 'thermal barrier'. It is shown that the ratio of fusion power density to the power loss per unit volume in the plugs does increase when the temperatures are allowed to be unequal but simultaneously the central cell to plug volume ratio decreases sufficiently to result in a reduction in the Q-value of the system as compared to the case when the two temperatures are equal.

11351 **Steady-state tokamak reactor with non-divertor impurity control - STARFIRE.** Baker, C.C. (Argonne National Lab., IL (USA)). pp 1161-1167 of Fusion technology 1980. Vol. 2. Oxford, England; Pergamon Press (1981). (CONF-800950—Vols.1,2; EUR—7035).

From 11. symposium on fusion technology; Oxford, UK (15 Sep 1980).

In two volumes.

STARFIRE is a conceptual design study of a commercial tokamak fusion electric power plant. Particular emphasis has been placed on simplifying the reactor concept by developing design concepts to produce a steady-state tokamak with non-divertor impurity control and helium ash removal. The concepts of plasma current drive using lower hybrid rf waves and a limiter/vacuum system for reactor applications are described.

11352 **Inertial confinement fusion reactor systems.** Frank, T.G.; Bohachevsky, I.O.; Pendergrass, J.H. (Los Alamos Scientific Lab., NM (USA)). pp 1179-1185 of Fusion technology 1980. Vol. 2. Oxford, England; Pergamon Press (1981). (CONF-800950—Vols.1,2; EUR—7035).

From 11. symposium on fusion technology; Oxford, UK (15 Sep 1980).

In two volumes.

A variety of reactor cavity concepts, drivers, and energy conversion mechanisms are being considered to realize commercial applications of ICF. Presented in this paper are: (1) a review of reactor concepts with estimates of practically achievable pulse repetition rates, (2) a survey of drivers with estimates of the requirements on reactor conditions imposed by beam propagation characteristics, and (3) an assessment of compatible driver-reactor combinations.

11353 **HYFIRE: a Tokamak - high-temperature electrolysis system.** Fillo, J.A.; Powell, J.R.; Steinberg, M.; Benenati, R.; Horn, F.; Isaacs, H.; Lazareth, O.W.; Makowitz, H.; Usher, J. (Brookhaven National Lab., Upton, NY (USA)). pp 1215-1221 of Fusion technology 1980. Vol. 2. Oxford, England; Pergamon Press (1981). (CONF-800950—Vols.1,2; EUR—7035).

From 11. symposium on fusion technology; Oxford, UK (15 Sep 1980).

In two volumes.

Brookhaven National Laboratory (BNL) is carrying out a comprehensive conceptual design study called HYFIRE of a commercial fusion Tokamak reactor, high-temperature electrolysis system. The study is placing particular emphasis on the adaptability of the STARFIRE power reactor to a synfuel application. The HYFIRE blanket must perform three functions: a) provide high-temperature (approx. 1400 deg C) process steam at moderate pressures (in the range of 10 to 30 atm) to the high-temperature electrolysis (HTE) units; b) provide high-temperature (approx. 700 deg to 800 deg C) heat to a thermal power cycle for generation of electricity to the HTE units; and c) breed enough tritium to sustain the D-T fuel cycle. In addition to thermal energy for the decomposition of steam into its constituents, H_2 and O_2, electrical input is required. Fourteen hundred degree steam coupled with 40% power cycle efficiency results in a process efficiency (conversion of fusion energy to hydrogen chemical energy) of 50%.

11354 **High flux energy and particle collection scheme for divertors.** Werley, K.A.; Gilligan, J.G.; Miley, G.H. (Illinois Univ., Urbana (USA). Fusion Studies Lab.). pp 1223-1228 of Fusion technology 1980. Vol. 2. Oxford, England; Pergamon Press (1981). (CONF-800950—Vols.1,2; EUR—7035).

From 11. symposium on fusion technology; Oxford, UK (15 Sep 1980).

In two volumes.

A lithium rain approach is described for handling the large divertor ion and energy fluxes (10^{23} ions/m^{2}s and 10 MW/m^2) inherent to a power producing reactor. Previous concepts, which use a solid wall or gravity driven liquid metal flow, face serious feasibility questions dealing with thermo-mechanical wall material limitations or MHD retardation forces on a moving conducting fluid. The new scheme uses a rain of high speed (1 to 166 m/s) lithium droplets, formed by nozzles outside of the magnetic field, to collect diverted ions and their energy.

11355 **'compact' reversed-field pinch (CRFP) reactor design.** Miley, G.H.; Nebel, R.A. (Illinois Univ., Urbana (USA). Fusion Studies Lab.). pp 1229-1233 of Fusion technology 1980. Vol. 2. Oxford, England; Pergamon Press (1981). (CONF-800950—Vols.1,2; EUR—7035).

From 11. symposium on fusion technology; Oxford, UK (15 Sep 1980).

In two volumes.

Many fusion reactor design studies have resulted in large and complex nuclear 'islands', making maintenance difficult, integration into smaller electrical networks impractical, and posing financial problems due to the large capital costs involved. Consequently, a new class of concepts, termed compact tori (CT), have evolved that could potentially lead to smaller, less complex systems. These concepts include Field Reversed Mirrors, Field Reversed Theta Pinches, and Spheromaks. They all share, to a varying extent, the common features of a closed toroidal configuration and a high-β field that is largely created by internal plasma currents. The Reversed Field Pinch (RFP) has a magnetic configuration that is similar in many respects to these CT. Consequently it too can be viewed as a candidate for a 'compact' system. While a relatively large major radius (and large aspect ratio) will be retained, the plasma chamber itself and the surrounding structure can enjoy a 'compactness' and still provide easy access.

11356 **Witamir-I, a tandem mirror reactor with non-zero nu.** Santarius, J.; Audenaerde, K. (Wisconsin Univ., Madison (USA). Dept. of Nuclear Engineering); Beyer, J. (Wisconsin Univ., Madison (USA). Dept. of Electrical and Computer Engineering) (and others). pp 1261-1265 of Fusion technology 1980. Vol. 2. Oxford, England; Pergamon Press (1981). (CONF-800950—Vols.1,2; EUR—7035).

From 11. symposium on fusion technology; Oxford, UK (15 Sep 1980).

In two volumes.

Witamir-I, a tandem mirror reactor, is a study by the University of Wisconsin fusion engineering design group. Various engineering aspects and physics considerations are presented. Witamir-I is a high Q device with particularly attractive maintenance features and blanket characteristics.

11357 **X-ray imaging of laser produced plasmas.** Duncan, C.I.R. Oxford, England; Oxford University (1981). 148p. Available from British Library, Boston Spa, Wetherby, West Yorks. No. D45026/83.

There is much current interest in laser driven compression as an approach to inertial confinement fusion. The success of this ap-

proach however, depends upon imploding hollow spherical shells to high densities in a stable and symmetrical manner. This thesis investigates the effects of large and small scale illumination non-uniformity on the symmetry of such implosions. Experiments were performed using infrared and green irradiation and radiographs were obtained using zone plate coded imaging and x-ray pinhole photography. The results show distortion of the imploding material due to large scale illumination asymmetry and rippling due to beam structure. Comparisons are made with theoretical predictions.

11358 **(ADSM—18-P46FD) Army Civilian Personnel System (ACPERS): functional description. Automated Data Systems Manual.** (Oak Ridge National Lab., TN (USA)). Dec 1983. Contract W-7405-ENG-26. 170p. NTIS, PC A08/MF A01. Order Number DE84004889.

Portions are illegible in microfiche products.

This Functional Description for the automated Army Civilian Personnel System (ACPERS) is written to provide: system requirements to be satisfied which will serve as a basis for mutual understanding between the user and the developer; information on performance requirements, preliminary design, and user impacts including fixed and continuing costs; and a basis for the development of the system tests.

11359 **(CONF-8310243—1) Typographical terminology.** Walker, T.R. (Oak Ridge National Lab., TN (USA)). 1983. Contract W-7405-ENG-26. 4p. NTIS, PC A02/MF A01. Order Number DE84001981.

From IEEE Professional Communication Society conference; Atlanta, GA, USA (19 Oct 1983).

Portions are illegible in microfiche products.

Every craft develops its own language and printers are no exception. Technical writers and editors, in daily contact with printers and compositors, sometimes become confused by the language used. Today's compositors use high-speed, computerized phototypesetters instead of type cases and Linotype machines but many of the words they use were developed during the early days of printing when all type was set by hand from a typecase. Although the words, as used today, still have the same basic meaning, the editor or writer has no way of knowing the meaning unless they have a background in printing or typesetting. A listing of the most commonly used words and their origins and definitions will help clear some of the confusion. The inability to communicate with printers and typesetters frequently leads to misunderstandings and the production of work that does not meet the required standards.

11360 **(DOE/IG—0202) Government-owned property in the custody of contractors.** (Department of Energy, Washington, DC (USA). Office of Inspector General). 13 Jan 1984. 28p. TIC, PO Bx 62, Oak Ridge, TN 37831.

Report to the Secretary.

The management of government-owned property at 11 Department of Energy (DOE)-owned facilities was reviewed. The objectives of the review were to determine whether property was effectively acquired, used, and accounted for in the Department's financial records. The examination was made in accordance with generally accepted government auditing standards for economy and efficiency audits and included such tests of the procedures and accounting records as was considered necessary in the circumstances. The estimated value of government personal property in the hands of Departmental Contractors is more than $9 billion. This includes property owned or leased by either the government or contractors. During this review, the 11 contractors were visited and nearly 600 recently acquired capital items were examined. An attempt was made to learn if the property was properly acquired, adequately accounted for, properly utilized, and/or if not needed, whether appropriate disposal actions had been taken. The report cites deficiencies in the justification and documentation of purchase decisions, the accountability maintained over property on-hand, and in the identification and disposal of underutilized property.

11361 **(INIS-mf—8284) Publications of the University of Karlsruhe (T.H.) and the Nuclear Research Center Karlsruhe 1981.** (Karlsruhe Univ. (T.H.) (Germany, F.R.). Bibliothek; Kernforschungszentrum Karlsruhe G.m.b.H. (Germany, F.R.). Literaturabteilung). 1982. 177p. (In German). NTIS (US Sales Only), PC A09/MF A01. Order Number DE83704763.

This is the 14th volume of the joint list of publications of the University of Karlsruhe (T.H.), the Nuclear Research Center Karlsruhe and some institutions which are closely linked to the University. It contains the publications of the year 1981 as well as some addenda from 1980. Included were books and journals, journal articles and contributions from compilations, research reports, dissertations and habilitation theses which were written or published by these institutions, their bodies and institutes as well as their teachers and scientific staff, and also patents. Not included were, as a rule, diploma theses, newspaper articles, reviews, internal reports and bulletins. The list of publications from University is mainly based on entries made by the institutes and chairs; its completeness can not be granted here.

11362 **(RISO-M—2377) Reports issued by the Risoe National Laboratory in the series: RISO-R reports and RISO-M reports.** (Risoe National Lab., Roskilde (Denmark)). Aug 1982. 91p. NTIS (US Sales Only), PC A05/MF A01; Also available from Risoe Library, Dk-4000 Roskilde, Denmark. Order Number DE83704603.

This list includes all scientific and technical reports issued from 1957 - May 1982 by Risoe National Laboratory, former Research Establishment Risoe. The list covers Riso-R and Risoe-M reports, and is arranged according to report numbers.

11363 **(RISO-M—2382) Annual report 1982 chemistry department.** Larsen, E.; Nielsen, O.J. (eds.). (Risoe National Lab., Roskilde (Denmark)). Apr 1983. 33p. NTIS (US Sales Only), PC A03/MF A01. Order Number DE83704604.

The work going on in the Risoe National Laboratory, Chemistry Department is briefly surveyed by a presentation of all articles and reports published in 1982. The facilities and equipment are barely mentioned. The papers are divided into eight activities: 1. neutron activation analysis 2. analytical- and organic chemistry 3. environmental chemistry 4. polymer chemistry 5. geochemistry 6. radical chemistry 7. poitron annihilation 8. uranium process chemistry.

11364 **Summary and evaluation of the results of the symposium on the role of technology assessment in the decision-making process.** Paschen, H. Berlin, Germany; Unweltbundesamt (1983). vp. (CONF-8210185—Summ.).

From International symposium on the role of technology assessment in the decision-making process; Bonn, F.R. Germany (19 Oct 1982).

Individual papers were abstracted and indexed separately.

11365 **(ANL—83-96) Approach to programming multiprocessing algorithms on the Denelcor HEP.** Lusk, E.L.; Overbeek, R.A. (Argonne National Lab., IL (USA)). Dec 1983. Contract W-31-109-ENG-38. 22p. NTIS, PC A02/MF A01. Order Number DE84005440.

In the process of learning how to write code for the Denelcor HEP, we have developed an approach that others may well find useful. We believe that the basic synchronization primitives of the HEP (i.e., asynchronous variables), along with the prototypical patterns for their use given in the HEP FORTRAN 77 User's Guide, form too low-level a conceptual basis for the formulation of multiprocessing algorithms. We advocate the use of monitors,

which can be easily implemented using the HEP primitives. Attempts to solve substantial problems without introducing higher-level constructs such as monitors can produce code that is unreliable, unintelligible, and restricted to the specific dialect of FORTRAN currently supported on the HEP. Our experience leads us to believe that solutions which are both clear and efficient can be formulated using monitors.

11366 **(ANL/MCS-TM—10) Minimax solution of a nonlinear system of mixed equalities and inequalities.** Garcia-Palomares, U.M. (Argonne National Lab., IL (USA)). Jul 1983. Contract W-31-109-ENG-38. 19p. NTIS, PC A02/MF A01. Order Number DE84003870.

A modification of a quadratic algorithm for solving a nonlinear system of mixed equalities and inequalities is proposed. Under suitable conditions, the modified algorithm always generates a local minimum of a function that represents the maximum violation of any equality of inequality of the system. A superlinear rate of convergence is achieved, when the maximum violation is null. Neither convexity nor constraint qualifications are required.

11367 **(ANSI/ANS—10.2-1982) American National Standard: recommended programming practices to facilitate the portability of scientific-computer programs.** (American Nuclear Society, La Grange Park, IL). Mar 1982. 11p. American Nuclear Society, 555 Kensington Ave., La Grange Park, IL 60525.

This standard recommends programming practices to facilitate the portability of computer programs prepared for scientific and engineering computations. These practices are intended to simplify implementation, conversion, and modification of computer programs.

11368 **(CONF-8310244—1) Algorithm to calculate proportional area transformation factors for digital geographic databases.** Edwards, R. (Oak Ridge National Lab., TN (USA)). 1983. Contract W-7405-ENG-26. 11p. NTIS, PC A02/MF A01. Order Number DE84004456.

From Spatially-Oriented Referencing Systems Association (SORSA) general meeting; College Park, MD, USA (10 Oct 1983).

A computer technique is described for determining proportionate-area factors used to transform thematic data between large geographic areal databases. The number of calculations in the algorithm increases linearly with the number of segments in the polygonal definitions of the databases, and increases with the square root of the total number of chains. Experience is presented in calculating transformation factors for two national databases, the USGS Water Cataloging Unit outlines and DOT county boundaries which consist of 2100 and 3100 polygons respectively. The technique facilitates using thematic data defined on various natural bases (watersheds, landcover units, etc.) in analyses involving economic and other administrative bases (states, counties, etc.), and vice versa.

11369 **(DOE/ER/10357—1) Implementation of MACLISP on a large address space computer. Final report.** Moses, J. (Massachusetts Inst. of Tech., Cambridge (USA)). 21 Dec 1983. Contract AC02-79ER10357. 4p. NTIS, PC A02/MF A01. Order Number DE84005042.

This is a belated final report on the implementation of NIL - the New Implementation of LISP. Work on this project began in 1978 and is still continuing. The original timetable for the project - two years - slipped badly. It took us over four years to get a working version ready for distribution. We have distributed at this point over 130 copies of the NIL System and many of the users find it superior to all available alternatives on the DEC VAX. In that sense the project has been quite successful.

11370 **(DOE/ER/12048—T1) Evaluation of the large scale computing needs of the energy research program and how to meet them. Final report.** Miller, B. (Hart (Fred C.) Associates, Inc., Washington, DC (USA)). [nd]. Contract AC01-82ER12048. 52p. NTIS, PC A04/MF A01. Order Number DE84005355.

Portions are illegible in microfiche products.

The Energy Research program may be on the verge of abdicating an important role it has traditionally played in the development and use of state-of-the-art computer systems. The lack of easy access to Class VI systems coupled to the easy availability of local, user-friendly systems is conspiring to drive many investigators away from forefront research in computational science and in the use of state-of-the-art computers for more discipline-oriented problem solving. The survey conducted under the auspices of this contract clearly demonstrates a significant suppressed demand for actual Class VI hours totaling the full capacity of one such system. The current usage is about a factor of 15 below this level. There is also a need for about 50% more capacity in the current mini/midi availability. Meeting the needs of the ER community for this level of computing power and capacity is most probably best achieved through the establishment of a central Class VI capability at some site linked through a nationwide network to the various ER laboratories and universities and interfaced with the local user-friendly systems at those remote sites.

11371 **(DOE/ET/29365—2) Numerical and theoretical investigations into a continuation approach to decentralized control.** Harris, T.L. (Purdue Univ., Lafayette, IN (USA)). May 1982. Contract AC01-79ET29365. 170p. NTIS, PC A08/MF A01. Order Number DE84005504.

Portions are illegible in microfiche products. Original copy available until stock is exhausted; Thesis.

This thesis investigates theoretical and numerical aspects of a continuation approach to decentralized eigenvalue assignment for interconnected linear systems. In particular, a continuation method is developed to construct decentralized output feedback to assign a desired set of natural frequencies to a system. This method is a homotopy technique which imbeds the decentralized control problem into a parameterized family of decentralized control problems. The parameterization is based on the system interconnections and represents a measure of the coupling between subsystems. A differential equation is constructed based on this parameterization. The initial condition of this differential equation is the feedback required to assign eigenvalues to the decoupled system, and the endpoint of the equation's solution trajectory is the decentralized output feedback required for eigenvalue in the original problem.

11372 **(DOE/ET/53075—T1) NIL notes for release 0.259.** Burke, G.S.; Carrette, G.J.; Eliot, C.R. (Massachusetts Inst. of Tech., Cambridge (USA). Lab. for Computer Science). Jun 1983. Contract AC02-78ET53075. 240p. NTIS, PC A11/MF A01. Order Number DE84005045.

Portions are illegible in microfiche products.

This document describes NIL, a New Implementation of Lisp. NIL is currently under development on the DEC VAX under the VAX/VMS operating system.

11373 **(DOE/ET/53075—T2) Introduction to NIL.** Burke, G. (Massachusetts Inst. of Tech., Cambridge (USA). Lab. for Computer Science). Mar 1983. Contract AC02-78ET53075. 58p. NTIS, PC A04/MF A01. Order Number DE84005044.

This document is a primer for NIL, a New Implementation of Lisp. It is not a description or overview of the language, but rather documentation of some of the ordinary facilities available, so that those with some small LISP experience can use NIL in a basic way.

11374 **(EGG-IS—6478) Cyber Visual System (CVS) reference manual.** Snider, D.M.; Wagner, K.L. (EG and G Idaho, Inc., Idaho Falls (USA)). Dec 1983. Contract AC07-76ID01570. 97p. NTIS, PC A05/MF A01. Order Number DE84005191.

This is a reference manual for the Idaho National Engineering Laboratory (INEL) Cyber Visual System. The manual contains a summary of the operation of the CVS program and describes the hardware requirements. It explains the main features and operation of the program as well as how to communicate with the host computer. CVS is a high performance color graphics system. This system enables color pictures to be generated and edited on a color raster terminal and subsequently output as 35mm color transparencies and grey-scale or black and white hard copies. CVS provides processors for the construct word slides, tables, charts, and sketch-

es. Commands for the creation and editing of images are entered by picking items from menus displayed on the terminal screen. The CVS program executed on a Control Data Corporation (CDC) CYBER 176 computer in a NOS/BE environment. The user interacts with CVS through a color terminal. There is no requirement as to the brand of color terminal. However, only drivers for the AED line of terminals are currently available. As other terminals become available, new driver modules will be added.

11375 **(IC—81/235) Vector-valued measure and the necessary conditions for the optimal control problems of linear systems.** Xunjing, L. (International Centre for Theoretical Physics, Trieste (Italy)). Dec 1981. 13p. NTIS (US Sales Only), PC A02/MF A01. Order Number DE83704431.

The vector-valued measure defined by the well-posed linear boundary value problems is discussed. The maximum principle of the optimal control problem with non-convex constraint is proved by using the vector-valued measure. Especially, the necessary conditions of the optimal control of elliptic systems is derived without the convexity of the control domain and the cost function.

11376 **(IC—82/38) Optimal control of distributed parameter system with incomplete information about the initial condition.** Kotarski, W.; Kowalewski, A. (International Centre for Theoretical Physics, Trieste (Italy)). Mar 1982. 23p. NTIS (US Sales Only), PC A02/MF A01. Order Number DE83704443.

In this paper we consider an optimal control problem for a system described by a linear partial differential equation of the parabolic type with Dirichlet's boundary condition. We impose some constraints on the control. The performance functional has the integral form. The control time T is fixed. The initial condition is not given by a known function but belongs to a certain set (incomplete information about the initial state). The problem formulated in this paper describes the process of optimal heating, of which we do not have exact information about the initial temperature on the heated object. We present an example in which the set of admissible controls and one of initial conditions are given by means of the norm constraints too. The application of the well-known projective gradient method in the Hilbert space allows us to obtain the numerical solution for our optimization problem.

11377 **(IC—82/51) Extension of Hsup(p) functions in polydiscs.** Chee, P.S. (International Centre for Theoretical Physics, Trieste (Italy)). May 1982. 10p. NTIS (US Sales Only), PC A02/MF A01. Order Number DE83704445.

For N=2 or 3 it is shown that if E is the zero set of a holomorphic function in Usup(N) satisfying the separation condition of Alexander, viz., there exist r is an element of (0,1) and delta>0 such that 'α-β'>=delta whenever (z',α,z'') not= (z',β,z'') are both in (Qsup(k-1)xUxQsup(N-k)) intersection E, where Q=(lambda is an element of C:r<'lambda'<1), then (a) E is the zero set of some F is an element of Hsup(infinity)(Usup(N)) and (b) for 0<p<=infinity, every g is an element of H(E) so that 'g'sup(p) has a pluriharmonic majorant on E extends to a G is an element of Hsup(p)(Usup(N)). This generalizes earlier results of the author [Proc. Amer. Math. Soc., 60, 109-115 (1976)] and of Zarantonello [ibid., 78, 519-524 (1980)].

11378 **(IC—82/66) Analytical examination of distortions in power spectra due to sampling errors.** Njau, E.C. (International Centre for Theoretical Physics, Trieste (Italy)). Jun 1982. 21p. NTIS (US Sales Only), PC A02/MF A01. Order Number DE83704598.

Distortions introduced into spectral energy densities of sinusoid signals as well as those of more complex signals through different forms of errors in signal sampling are developed and shown analytically. The approach we have adopted in doing this involves, firstly, developing for each type of signal and for the corresponding form of sampling errors an analytical expression that gives the faulty digitization process involved in terms of the features of the particular signal. Secondly, we take advantage of a method described elsewhere [IC/82/44] to relate, as much as possible, the true spectral energy density of the signal and the corresponding spectral energy density of the faulty digitization process. Thirdly, we then develop expressions which reveal the distortions that are formed in the directly computed spectral energy density of the digitized signal. It is evident from the formulations developed herein that the types of sampling errors taken into consideration may create false peaks and other distortions that are of non-negligible concern in computed power spectra.

11379 **(IC—82/67) Power estimation of sinusoids mounted upon dc background: Conditional problems.** Njau, E.C. (International Centre for Theoretical Physics, Trieste (Italy)). Jun 1982. 17p. NTIS (US Sales Only), PC A02/MF A01. Order Number DE83704599.

We analyse theoretically the distortions involved in directly computed energy spectra of sinusoid signals which are intermingled with dc background. It is shown that under certain stated conditions, the effect of strong dc background is, among others, to grossly exaggerate the computed energy or power density corresponding to the frequency of the sinusoid signal involved, and to clip onto "energy density approx.= $1/\omega^2$" relationship at low frequencies that is hardly affected by the choice of the sinusoid period. In the presence of sizeable mismatch between the initial and final phases of the sinusoid signal involved, the relationship "energy density approx.= $1/\omega^2$" is still maintained at low frequencies even when only few wavelengths of the sinusoid are included in the data samples. However, when the above-mentioned mismatch is negligible and at the same time the sinusoid wavelengths included in the data samples are few, the relationship "energy density is approx. constant" prevails at low frequencies whether or not the dc background is weak. The formulation is finally extended onto sinusoid signals mounted upon slowly changing background.

11380 **(IC—82/217) Formula relating infinitesimal Backlund transformations to hierarchy generating operators.** Hou, B.Y.; Tu, G.Z. (International Centre for Theoretical Physics, Trieste (Italy)). Dec 1982. 13p. NTIS (US Sales Only), PC A02/MF A01. Order Number DE83704438.

Let u'=Bsub(eta)u and l be, respectively, the elementary Backlund transformation and hierarchy generating operators for the AKNS equations. It is shown that (dB/d eta)(Bsub(eta))$^{-1}=\sigma_3/$(l-eta). A similar formula relating to the general NxN matrix spectral problem is also derived.

11381 **(IC—82/225) Necessary and sufficient conditions of the optimality for hyperbolic systems with non-differentiable performance functional.** Kowalewski, A. (International Centre for Theoretical Physics, Trieste (Italy)). Nov 1982. 15p. NTIS (US Sales Only), PC A02/MF A01. Order Number DE83704440.

In this paper an optimal control problem with non-differentiable cost function for distributed parameter system is solved. As an example an optimal control problem for system described by a linear partial differential of hyperbolic type with the Neuman's boundary condition is considered. By use of the Milutin-Dubovicki method, necessary and sufficient conditions of optimality with non-differentiable performance functional and constrained control are derived for Neuman's problem.

11382 **(LA-UR—83-3396) Interactive benchmark comparison between a VAX 11/780 and a VAX 11/782.** Lubeck, O.; Martinez, R. (Los Alamos National Lab., NM (USA)). 1983. Contract W-7405-ENG-36. 5p. (CONF-8310182—7). NTIS, PC A02/MF A01. Order Number DE84003828.

From US fall DECUS symposium; Las Vegas, NV, USA (24 Oct 1983).

Portions are illegible in microfiche products.

In this paper, we present the results of a benchmark comparison between a single processor VAX 11/780 and a dual processor VAX 11/782. Using the VMS Monitor utility and available accounting data, we first parameterized the workload on the VAX 11/782. We developed synthetic scripts that matched both the current workload parameters and also generated four forecasted workloads. Using a remote terminal emulator (RTE), we submitted interactive user commands from the scripts to the single and dual processor VAXs. Response times were then measured as a function of script category and VAX model.

11383 **(LA-UR—83-3397) Cray/VAX interactive graphics system.** Willerton, D.L. (Los Alamos National Lab., NM (USA)). 1983. Contract W-7405-ENG-36. 4p. (CONF-8310182—6). NTIS, PC A02/MF A01. Order Number DE84003826.

From US fall DECUS symposium; Las Vegas, NV, USA (24 Oct 1983).

Portions are illegible in microfiche products.

A new graphics system has been brought into production at Los Alamos National Laboratory that interfaces under codes running on the Cray-1 computers with an Evans and Sutherland Multi Picture System high-speed, high-resolution graphics workstation. The system is described from three points of view: hardware, software, and software functions. Special emphasis is placed on the use of detached processes, global sections, and event flag communication.

11384 **(LBL—16194) Multiplication of processing capacity with a parallel processor array.** Meng, J. (Lawrence Berkeley Lab., CA (USA)). Oct 1983. Contract AC03-76SF00098. 8p. (CONF-8310194—3). NTIS, PC A02/MF A01. Order Number DE84004654.

From Asilomar conference on circuits, systems and computers; Pacific Grove, CA, USA (31 Oct 1983).

Portions are illegible in microfiche products.

A parallel connection of eight minicomputers is under test in an attempt to deal interactively with arrays of experimentally-generated kiloparameter data events. We have been able to achieve computer amplification factors linearly proportional to the number of executing processors. By replacing our minicomputers with single chip processor arrays, we expect to observe additional multiplication of data processing capacity.

11385 **(LBL—16805) Operation of a computer aided drafting system: improvements, results and hopes.** Millaud, J.; Goulding, F.; Salz, P.; Shimada, K. (Lawrence Berkeley Lab., CA (USA)). Oct 1983. Contract AC03-76SF00098. 12p. (CONF-8310160—1). NTIS, PC A02/MF A01. Order Number DE84005176.

From 3. DOE workshop on computer-aided engineering; Livermore, CA, USA (13 Oct 1983).

A two workstation Computer Aided Drafting system has been in operation since September 1982 at the Lawrence Berkeley Laboratory, Department of Instrument Science and Engineering. Improvements made to the original hardware and software configuration are described. Benefits from this installation are reported and future developments are outlined.

11386 **(PNL-SA—9932) Variable user interface construction techniques.** Thomas, J.J. (Pacific Northwest Lab., Richland, WA (USA)). Sep 1981. Contract AC06-76RL01830. 16p. (CONF-820318—4). NTIS, PC A02/MF A02. Order Number DE83002710.

From Conference on human factors in computer systems; Washington, DC, USA (15 Mar 1982).

Portions are illegible in microfiche products.

The ability to construct applications that have variable user interfaces is becoming a desired characteristic in many application areas. One such area is human factors research. Here the ability to provide multiple user interfaces to a single application, without application modification, allows testing of a variety of user interfaces with controlled experiments. By variable user interfaces, the authors mean a user interface which is a function of the available interaction hardware combined with the user environment and user familiarity with the system. Example user interfaces discussed in this paper include structured interaction sequences, i.e., menus, and unstructured interaction sequences offered by command systems. Both types of interfaces can be provided for a range of applications through a single application interface. The techniques discussed also address an approach toward providing a common interaction style across several application domains.

11387 **(PNL-SA—11765) Architecture for a user interface management system.** Thomas, J.J. (Pacific Northwest Lab., Richland, WA (USA)). Oct 1983. Contract AC06-76RL01830. 7p. (CONF-8311115—1). NTIS, PC A02/MF A01. Order Number DE84003982.

From Workshop on user interface management system; Frankfurt, F.R. Germany (1 Nov 1983).

The term User Interface Management System has been coined to represent a set of software tools for the construction and control of the interaction dialogue between the user and the computational resource. This set of software tools will have a significant impact on the structure of applications in the future. Its advantages include faster and more reliable application development, consistent user interfaces across application domains, and easily modifiable user interfaces. Also, the user interface management systems are an essential experimental tool for research in the human computer interface. This paper describes a brief history of UIMS and an architecture for a specific UIMS to provide an adaptable user interface.

11388 **(SAND—83-1376C) Altering the application of the traditional systems lifecycle.** Schofield, J.R. Jr. (Sandia National Labs., Albuquerque, NM (USA)). 1983. Contract AC04-76DP00789. 15p. (CONF-8310211—2). NTIS, PC A02/MF A01. Order Number DE84000052.

From USE conference; Orlando, FL, USA (4 Oct 1983).

Portions are illegible in microfiche products.

The following material examines many of the issues which face the systems analyst today. The paper is designed to build an argument for altering the system's development process. Maintenance is briefly mentioned to reveal the common attributes between some maintenance tasks and development work. Although economic benefits justify altering the development approach, intangible benefits are realized as well.

11389 **(SAND—83-1874C) One solution to STAR-1100 in a dual machine environment.** (Sandia National Labs., Albuquerque, NM (USA)). 1983. Contract AC04-76DP00789. 9p. (CONF-8310211—3). NTIS, PC A02/MF A01. Order Number DE83017160.

From USE conference; Orlando, FL, USA (4 Oct 1983).

Very few initial problems were encountered in moving to the split STAR. Modifications to STAR to allow a split machine environment as described here included modification of the scratch and clean run to include two machines and a change to the EXEC portion of STAR to turn off some file name checking. The change was almost transparent to the user community with two one-page bulletins providing sufficient information and no runstream changes required. After initial training, the tape library is functioning smoothly. In spite of the physical proximity of our two machines, very little operator confusion has resulted. This solution to the dual machine problem appears quite satisfactory providing there is no overriding need to be able to write individual tapes on both machines at will. There does not seem to be any reason why this solution could not be expanded to an environment with more than two machines.

11390 **(SAND—83-2072C) Bootstrapping RSX-11S from ROM memories.** Chipman, A. (Sandia National Labs., Albuquerque, NM (USA)). 1983. Contract AC04-76DP00789. 7p. (CONF-8309197—1). NTIS, PC A02/MF A01. Order Number DE83018234.

From DECUS symposium; Las Vegas, NV, USA (29 Sep 1983).

A technique has been devised for bootstrapping RSX-11S from read-only memories. This papers describes a method for storing an RSX-11S system into PROM, and then loading it into RAM for execution. A full 124 kW system was saved into 64 4Kb PROM. The bootstrap program necessary to load and execute the system is also described.

11391 **(UCRL—15570) DIGLIB for HP-1000 computers.** Treadway, T.R. (General Electric Co., Sunnyvale, CA (USA)). Nov 1983. Contract W-7405-ENG-48. 151p. NTIS, PC A08/MF A01. Order Number DE84004741.

DIGLIB (Device Independent Graphic LIBrary), originally developed by Hal R. Brand for DEC computers, has been modified for use by HP 1000 computers running under RTE. DIGLIB consists of a small but functionally complete set of FORTRAN-callable library subroutines for creating arbitrary views of two-dimensional objects and for supporting interaction between the graphic applica-

tion program and its user. Graphic presentation is oriented towards interactive graphic display devices (such as the HP 2648A or Tektronix 4025) and line-drawing plotters (like the CalComp pen plotters). In addition, a high density Versatec V-80 or 1200 electrostatic printer/plotter interface is available. DIGLIB makes the application program independent of the specific graphic hardware devices, thereby presenting a uniform programmer interface to the graphics library, requiring few modifications (typically one) to the application program in order to accommodate a different graphics configuration. A device-independent subroutine library provides a high level of program portability, allowing support of a variety of different display controllers and operating environments.

11392 **(UCRL—90030) Generalization of the numerical Schwarz algorithm.** Rodrigue, G.; Simon, J. (Lawrence Livermore National Lab., CA (USA)). 1983. Contract W-7405-ENG-48. 13p. (CONF-831256—1). NTIS, PC A02/MF A01. Order Number DE84003735.

From 6. international conference on computing methods in applied sciences and engineering; Paris, France (12 Dec 1983).

The Schwarz alternating method of decomposing the domain has lately been found to be an effective means for solving elliptic partial differential equations on a multiprocessing computing system. In this paper, the method is recast into numerical linear algebra so that classical techniques of acceleration can be applied. Computional results using an incomplete-factorization as a pre-conditioner are given. A study of the effects of convergence by varying the subdomains is made.

11393 **Efficient algorithm for bifurcation problems of variational inequalities.** Mittelmann, H.D. *Mathematics of Computation;* **41**: No. 164, 473-589(Oct 1983). Contract AM03-76SF00326.

For a class of variational inequalities on a Hilbert space H bifurcating solutions exist and may be characterized as critical points of a functional with respect to the intersection of the level surfaces of another functional and a closed convex subset K of H. In a recent paper [13] we have used a gradient-projection type algorithm to obtain the solutions for discretizations of the variational inequalities. A related but Newton-based method is given here. Global and asymptotically quadratic convergence is proved. Numerical results show that it may be used very efficiently in following the bifurcating branches and that is compares favorably with several other algorithms. The method is also attractive for a class of nonlinear eigenvalue problems (K = H) for which it reduces to a generalized Rayleigh-quotient interaction. So some results are included for the path following in turning-point problems.

11394 **Anderson-Bjoerck for linear sequences.** King, R.F. *Mathematics of Computation;* **41**: No. 164, 591-783(Oct 1983).

The proposed one-point method for finding the limit of a slowly converging linear sequence features an Anderson-Bjoerck extrapolation step that had previously been applied to the Regula Falsi problem. Converegence is of order 1.839 as compared to $\sqrt{2}$ for the well-known Aitken-Steffensen δ^2-process, and to 1.618 for another one-point extrapolation procedure of King. There are examples for computing for computing a polynomial's multiple root with Newton's method and for finding a fixed point of a nonlinear function.

9903 Information Handling

REFER ALSO TO CITATION(S) 9226, 9824, 9888, 10475, 11115

11395 **(DOE/EV/10341—T1) Assessment of the DOE Office of Environment Planning and Budgeting Information System. Final report.** Gerson, J.I.; Hinckley, A.D.; McNeal, J.P. (General Research Corp., McLean, VA (USA)). Jul 1981. Contract AC01-80EV10341. 69p. (IRT—23400/1). NTIS, PC A04/MF A01. Order Number DE84004748.

Portions are illegible in microfiche products.

This report defines and assesses the Department's Planning, Programming, and Budgeting System (PPBS) as one critical component of the environmental information system. Preliminary research undertaken for this contract indicated that a major gap existed between DOE operating systems and the Agency-wide PPBS. Therefore, it was deemed appropriate to document the more encompassing PPBS as an initial contract effort. The other pertinent components of the environmental information system could be appraised in the context of PPBS requirements.

11396 **(LA-UR—83-3395) Experiment in benchmarking database systems.** Martinez, R.; Wiley, R.; Bitton, D.; Turbyfill, C. (Los Alamos National Lab., NM (USA); Cornell Univ., Ithaca, NY (USA)). 1983. Contract W-7405-ENG-36. 7p. (CONF-8310182—8). NTIS, PC A02/MF A01. Order Number DE84003840.

From US fall DECUS symposium; Las Vegas, NV, USA (24 Oct 1983).

Portions are illegible in microfiche products.

This paper describes and analyzes an interactive benchmark of the INGRES database system, which we have recently performed at the Los Alamos National Laboratory. The benchmark includes single-user runs and an extensive set of multi-user runs composed by synthesizing workloads of increasing complexity. Basic estimates were obtained for the response type of a range of interactive queries and for several other measures of the database management system performance.

11397 **(LITH-MAT-R—83-02) Formal specification and implementation of operations in information management systems.** Sandewall, E. (Linkoeping Univ. (Sweden). Matematiska Institutionen). Feb 1983. 30p. NTIS (US Sales Only), PC A03/MF A01. Order Number DE83704595.

Among information management systems we include general purpose systems, such as text editors and data editors (forms management systems), as well as special purpose systems such as mail systems and computer based calendars. Based on a method for formal specification of some aspects of IMS, namely the structure of the data base, the update operations, and the user dialogue, the paper shows how reasonable procedures for executing IMS operations can be written in the notation of a first-order theory, in such a way that the procedure is a logical consequence of the specification.

9905 Civilian Defense

11398 **(IFE/KR/E—82/001V) Shielding factors for typical houses in the Nordic countries.** Tveten, U. (Institute for Energy Technology, Kjeller (Norway)). Sep 1982. 47p. NTIS (US Sales Only), PC A04/MF A01. Order Number DE83704551.

The report presents the result of calculations of shielding factors that have been performed for typical houses (appartment buildings and one family houses) in Denmark, Finland, Norway and Sweden. A computer model developed at Risoe National Laboratory, Denmark has been used. The situation when radioactive materials are deposited on the walls and roof of the house as well as on the ground surrounding the house, has been considered. It appears from the report that the shielding factors can vary considerably with house type. In many cases the variation in total individual and collective radiation doses will be proportional to the shielding factor.

11399 **(UCID—19933) Heat conduction analog model of urban fire spread.** Reitter, T.A. (Lawrence Livermore National Lab., CA (USA)). Nov 1983. Contract W-7405-ENG-48. 41p. NTIS, PC A03/MF A01. Order Number DE84005075.

This report describes a model of urban fire spread. The model attempts to simulate the gross features of urban fire spread by adjusting parameters in a 2-D transient heat conduction code. The requirements imposed on the model are that the spread probabilities agree with those taken from empirical data or more sophisticated modesl, and that the results for the simple test problems be physically plausible. The effects of a constant wind velocity have also been simulated, but the results suffer from the lack of data for adjustment of parameters. The results of this preliminary investigation are encouraging. However, justification for further develop-

ment requires a direct comparison of costs and results using a more sophisticated model.

CORPORATE AUTHOR INDEX

In the Corporate Index, report literature is indexed using the name of the organization or institution responsible for issuing the report. Headings are provided for all report literature and for published literature for which a corporate approach is especially desirable, e.g., symposium and conference proceedings.

Each entry under a corporate heading gives the document title and the volume and abstract numbers. The document type, e.g., R for Report; country of publication, e.g., US; and language of the document, e.g., In German; are given in parentheses at the end of the entry. If no language statement appears, the language is English. Tables of document types and country of publication codes appear after the indexes.

DOE Energy Information Data Base: Corporate Author Entries (DOE/TIC-4585) is used in the standardization of corporate entries. DOE/TIC-4585 is available for purchase from the National Technical Information Service (NTIS), U. S. Department of Commerce, Springfield, Virginia 22161.

Zimbabwe - energy situation 1981/82, 9:10029 (R;DE;In German)

Bureau of Mines, Washington, DC (USA)
Costs and effects of environmental protection controls regulating US phosphate rock mining. Information circular, 9:9991 (R;US)

C

Caen Univ., 14 (France). Lab. de Physique Corpusculaire
Study of gamma-emitting radionuclides present in the sediments and algae of the "Baie de l'Orne" (Central Normandy Coast) collecting during the years 1980 - 1982, 9:10752 (R;FR;In French)

California Energy Resources Conservation and Development Commission, Sacramento (USA)
Report to the Legislature on the California Energy Commission's Geothermal Development Grant Program for Local Governments, 9:9733 (R;US)

California Univ., Berkeley (USA). Dept. of Materials Science and Mineral Engineering
Diffusion of gases in porous solids: simulations and measurements. Fifth quarterly technical proogress report, July 16, 1983-October 15, 1983, 9:10427 (R;US)

California Univ., Los Angeles (USA)
Influence of late radiation effects on the immunological parameters of aging. Final technical report, September 1977-August 1983, 9:10846 (R;US)

California Univ., Los Angeles (USA). Dept. of Chemistry
Resonance Raman spectra of photochemical picosecond transients: method and application to study bacteriorhodopsin primary processes, 9:10765 (R;US)

Canadian Commercial Corp., Ottawa, Ontario
Canadian Seismic Agreement, 9:10962 (R;US)

Carnegie-Mellon Univ., Pittsburgh, PA (USA)
Program of research on microfabrication techniques for vlsi magnetic devices. Interim progress report 30 Sep 1981-29 Sep 1982, 9:10446 (R;US)

Carnegie-Mellon Univ., Pittsburgh, PA (USA). Dept. of Mechanical Engineering
Vaporization and devolatilization of coal water sprays. Fifth quarterly report for the period ending November 11, 1983, 9:9303 (R;US)

Carolina Power and Light Co., Raleigh, NC (USA)
North Carolina Rate Demonstration Project. Project Library. Part 1, 9:10065 (R;US)

Carrier Corp., Syracuse, NY (USA). Energy Systems Div.
Development of a high temperature solar powered water chiller. Phase III. Technical progress report, October 1, 1979-July 31, 1981, 9:9700 (R;US)

Case Western Reserve Univ., Cleveland, OH (USA). Dept. of Macromolecular Science
Spectroscopic characterization of the cured state of acetylene-terminated resin. Final report 1 Apr 1982-31 Mar 1983, 9:10285 (R;US)

Catalytic, Inc., Wilsonville, AL (USA)
Wilsonville advanced coal liquefaction research and development facility, Wilsonville, Alabama. Topical report No. 7. Operation and maintenance, 1982, 9:9231 (R;US)

CEA Centre d'Etudes de Bruyeres-le-Chatel, 92 - Montrouge (France)
French AEC nuclear microprobe: description and first application examples, 9:10310 (R;FR)
Inspection from outside of weld bead on tubes by gamma absorptiometry, 9:10435 (R;FR;In French)

CEA Centre d'Etudes Nucleaires de Cadarache, 13 - Saint-Paul-les-Durance (France)
Acoustic methods in sodium flow for characterising pump cavitation and noise erosion correlations, 9:9814 (R;FR)
Control absorber rod in Phenix. Comparison of calculated and measured worths, 9:9853 (R;FR)
Device for direct digitized radiology of small objects, 9:9835 (R;FR;In French)
Group collapsing strategy for 3D design calculations, 9:9816 (R;FR)
Heating measurements in a heterogeneous core configuration, 9:9831 (R;FR)
Influence of various stresses on diametral and axial plastic deformations of the Phenix reactor fuel cans, 9:9813 (R;FR;In French)
PHYSURA code - objectives, description, validation, 9:9878 (R;FR;In French)
Recent developments and improvements in the code system for the neutronic design of fast breeder reactors at CEA, 9:9815 (R;FR)
Temperature field downstream of an heated bundle mock-up results for different power distribution, 9:9843 (R;FR)
Three-dimensional solution of the Navier-Stokes equations by means of a finite element method, 9:10423 (R;FR;In French)
Transport of carbon in 316 steels submitted to neutron irradiation, 9:10209 (R;FR;In French)

CEA Centre d'Etudes Nucleaires de Fontenay-aux-Roses, 92 (France)
Depassivation and repassivation of austenitic stainless steels. Consequences on stress corrosion cracking, 9:10218 (R;FR)
Determination of seismic reference motions on nuclear sites in France, 9:9876 (R;FR;In French)
Gamma irradiation up to 10^9 rads of all silica fibers, comparison with polymer clad silica fibers and solid sample between 0.4 and 2.5 micrometers, 9:10291 (R;FR;In French)

How safety procedures can follow the evolution in transport of RAM, 9:9450 (R;FR)
Interactive computer model for the assessment of continuous release atmospheric transfers, 9:10679 (R;FR;In French)
Justification and crush tests compared with fall tests in relation to changes in existing regulations, 9:10399 (R;FR;In French, English)
Lessons learnt from the experience acquired on the operation of pressurized water reactors in the field of radiation protection, 9:9875 (R;FR;In French)
Operational and regulatory outlook for the transport of radioactive material, 9:9448 (R;FR)
Recent developments in spectrophotometry with optical fibers for in situ measurement of uranium VI in solution, 9:10309 (R;FR;In French)
Results of and prospects for studies on molten salt nuclear reactors, 9:9788 (R;FR;In French, English)
Studies of materials for molten salt nuclear applications, 9:9789 (R;FR)
Transient fuel melting, 9:9874 (R;FR;In French)

CEA Centre d'Etudes Nucleaires de Grenoble, 38 (France)
Device for direct digitized radiology of small objects, 9:9835 (R;FR;In French)

CEA Centre d'Etudes Nucleaires de Saclay, 91 - Gif-sur-Yvette (France)
ALS II: the Saclay proposal for a 2 GeV, CW electron facility, 9:10477 (R;FR)
Application of X ray microanalysis and gamma spectrometry to the study of the behaviour of gaseous and volatile fission products in transient conditions, 9:9844 (R;FR;In French)
Automatic treatment of a complex γ spectrum, results of the P.T.I. R12 intercomparison, 9:10572 (R;FR;In French)
Broken symmetry in the mean field theory of the ising spin glass: replica way and no replica way, 9:11159 (R;FR)
Complete and incomplete fusion in transition energy range, 9:11137 (R;FR;In French)
Creep embrittlement of austenitic stainless steels with titanium addition, 9:10208 (R;FR)
Damaging by fatigue and creep of PWR fuel cans. Programme and work in progress, 9:10217 (R;FR;In French)
Development and qualification of the LOCA analysis system CUPIDON-DEMETER, 9:9877 (R;FR)
DIOGENE: a small-scale pictorial drift chamber at Saturne, 9:10570 (R;FR)
El strength function at high spin and excitation energy, 9:11140 (R;FR)
Fast fission phenomena, 9:11141 (R;FR)
Ferritic steels for French LMFBR steam generators, 9:9817 (R;FR)
Flow-induced vibration of steam generator tube bundles, 9:9781 (R;FR;In French)
French AEC nuclear microprobe: description and first application examples, 9:10310 (R;FR)
Improvement of sizing methods using focussed probes, 9:10436 (R;FR;In French)
Influence of composition and thermomechanical treatment on EM 12 properties, 9:10216 (R;FR)
Influence of geometrical imperfections on the buckling loads and vibrations of fluid structure systems, 9:9834 (R;FR)
Influence of various stresses on diametral and axial plastic deformations of the Phenix reactor fuel cans, 9:9813 (R;FR;In French)
Irradiation effects on zircaloy, 9:10215 (R;FR;In French)
Justification and crush tests compared with fall tests in relation to changes in existing regulations, 9:10399 (R;FR;In French, English)
Large scale inhomogeneities and galaxy statistics, 9:10975 (R;FR)
Life prediction in low cycle fatigue using elastic analysis, 9:10210 (R;FR)
Mechanical stresses of PWR steam generators and particularly of the bundle of U tubes, 9:9782 (R;FR;In French)
Microstructure evolution of stainless steel 316 irradiated by neutrons, 9:10212 (R;FR;In French)
Multifrequency eddy current testing of helical tubes of steam generators, 9:9818 (R;FR;In French)
Nondestructive testing by neutron radiography, improvement of performance with cold neutrons, 9:10434 (R;FR;In French)
Operation of a neutron radiography facility using nitrocellulose films as solid track detectors, 9:9842 (R;FR;In French)
Pattern recognition program for the pictorial drift chamber DIOGENE, 9:10571 (R;FR)
Pion photo- and electroproduction on light nuclei, 9:11117 (R;FR)
Properties and mechanical behaviour of fuel cans of fast neutron reactors, 9:10213 (R;FR;In French)
Q.C.D. estimates of hadronic cross sections, 9:11068 (R;FR)
Radiation response of optical fibers and photodiode components with a view to nuclear data links, 9:10290 (R;FR;In French)
Radiographic inspection of PWR safe end welds, 9:9784 (R;FR;In French)
Research on giant resonances at high excitation energy by alpha particle inelastic scattering, 9:11122 (R;FR;In French)
Several applications of the DWBA diffractional model of quasi-elastic reactions induced by heavy ions, 9:11128 (R;FR)
Study of a multitransducer device by numerical simulation, 9:10438 (R;FR;In French)
Study of giant resonances at high excitation energy by alpha inelastic scattering, 9:11123 (R;FR;In French)
Study of swelling by simulation, 9:10214 (R;FR;In French)
Swelling of structural materials in fast neutron reactors, 9:10211 (R;FR;In French)
Transient beam loading calculations and experiment at the Saclay electron linac, 9:10478 (R;FR)
Transport of FBR spent fuels, 9:9449 (R;FR;In French)
Use of a model for the determination of actual lung volume in hypoxemic patients, 9:10793 (R;FR;In French)
Use of phase and transit time of an ultrasonic signal for the characterization of plane defects, 9:10437 (R;FR;In French)
Vibration signature of PWR internal structures in various abnormal conditions, 9:9783 (R;FR)

CEA Centre d'Etudes Nucleaires de Saclay, 91 - Gif-sur-Yvette (France). Service de Physique Theorique
Family of almost periodic Schroedinger operators, 9:11175 (R;US)

CEA Etablissement de la Vallee du Rhone, 30 - Bagnols-sur-Ceze (France)
Design and testing of a plutonium oxide transfer container, 9:10398 (R;FR;In English, French)
Glasses used for the high level radioactive wastes storage, 9:9458 (R;FR;In French)
Mechanical properties of some candidate glasses for high-level radioactive waste management, 9:9459 (R;FR)

Central Electricity Generating Board, Berkeley (UK). Berkeley Nuclear Labs.
COPDIRC - calculation of particle deposition in reactor coolants, 9:9790 (R;GB)

Central Electricity Generating Board, London (UK)
Sizewell 'B' power station public inquiry: CEGB proof of evidence. The disposal of low level and intermediate level solid wastes, 9:9460 (R;GB)

Centre Universitaire de Chambery, 73 (France)
Time reversal invariance in polarized neutron beta decay, 9:11086 (R;US)

C-E Power Systems, Windsor, CT (USA)
Industrial application of fluidized bed combustion. Progress report, January-September 1983, 9:10460 (R;US)

City Coll., New York (USA). Dept. of Chemical Engineering
Evaluation of the slurry methanol reactor, 9:9546 (R;US)
Thermodynamic constraints in catalytic reactions, 9:10356 (R;US)

Clarkson Coll. of Tech., Potsdam, NY (USA). Dept. of Chemical Engineering
Numerical study of heat transfer in turbulent shear flow, 9:10426 (R;US)

Club Niederoesterreich, Vienna (Austria)
Biogasohol, 9:9550 (R;AT;In German)

Colorado School of Mines, Golden (USA)
CSM/OCRD hard rock test facility at the CSM experimental mine, Idaho Springs, Colorado, 9:10964 (R;US)

Colorado School of Mines, Golden (USA). Dept. of Chemical and Petroleum Refining Engineering
Enthalpy measurement of coal-derived liquids. Final report, April 1981-September 1983, 9:9228 (R;US)

Colorado School of Mines, Golden (USA). Dept. of Geological Engineering
Hard rock excavation at the CSM/OCRD test site using Swedish blast design techniques, 9:10965 (R;US)

Colorado State Univ., Fort Collins (USA)
Sensitive collinear laser spectroscopy on fast atom and ion beams, 9:10574 (R;US)

Colorado Univ., Boulder (USA)
Degradation of evaporated aluminum films for solar reflectors. Final report, July 1, 1980-May 14, 1983, 9:9720 (R;US)
Columbia Univ., Palisades, NY (USA). Lamont-Doherty Geological Observatory
Transport and transfer rates in the waters of the Continental Shelf. Annual report, June 1, 1981-April 30, 1984, 9:10738 (R;US)
Variation of arctic cloud cover in summer: results through February 1983, 9:10641 (R;US)
Comitato Nazionale per l'Energia Nucleare, Sede (Italy). Direzione Centrale Sicurezza Nucleare e Protezione Sanitaria
Optimization technique for radioprotection: methodology questions and applicative problems, 9:11153 (R;IT;IT)
Commission of the European Communities, Brussels (Belgium). Directorate General for Science, Research and Development
Comparison of collector performance measured in a solar simulator, 9:9721 (R;XE)
Commission of the European Communities, Luxembourg
Experimental study of the tritium inventory in the BR3 and extrapolation to a P.W.R. of 900 MWe. Final report, 9:9785 (R;US)
Light-water reactors reference system classification for the European Reliability Data System (ERDS), 9:9774 (R;US)
Reestimation of the EDM in the Netherlands and the reference case. Final report, 9:9972 (R;US)
Commonwealth Edison Co., Maywood, IL (USA)
Analysis of cracked core spray piping from the Quad Cities Unit 2 boiling water reactor, 9:9772 (R;US)
Connecticut Office of Policy and Management, Hartford (USA). Energy Div.
State of Connecticut middle distillate monitoring program. Report for July 1982-June 1983, 9:9336 (R;US)
Conservatoire National des Arts et Metiers (CNAM), 75 - Paris (France)
Measurement of the activity coefficient of carbon in steels in liquid sodium, 9:10225 (R;FR;In French)
Cornell Univ., Ithaca, NY (USA)
Characterization and isolation of a light driven sodium pump from membranes of Halobacterium halobium. Final technical progress report, 9:10767 (R;US)
Experiment in benchmarking database systems, 9:11396 (R;US)
Marine biomass: New York State species and site studies. Annual report, December 1, 1981-November 30, 1982, 9:9602 (R;US)
Cornell Univ., Ithaca, NY (USA). Dept. of Materials Science and Engineering
Intrinsic gettering in EFG ribbons by pre-diffusion anneal at high temperatures. Quarterly report, July 1, 1983-September 31, 1983, 9:9597 (R;US)
Council for Mineral Technology, Randburg (South Africa)
Reduction in metal consumption by the use of alternating lines of higher and lower lifter bars in a rod mill, 9:10145 (R;US)

D

Danske Elvaerkers Forening, Copenhagen
Offshore wind power in Denmark, 9:9751 (R;DK;In Danish)

Time reversal invariance in polarized neutron beta decay, 9:11086 (R;US)

International Atomic Energy Agency, Seibersdorf (Austria). Laboratories
Report on intercomparison A-13 of the determination of trace elements in freeze dried animal blood, 9:10770 (R;XA)
Report on intercomparison V-9 of the determination of trace elements in cotton cellulose, 9:10769 (R;XA)

International Atomic Energy Agency, Vienna (Austria)
Characteristics of radioactive waste forms conditioned for storage and disposal: Guidance for the development of waste acceptance criteria. Report by an advisory group meeting on conditioning requirements for storage and disposal of radioactive wastes organized by the IAEA and held in Vienna, 23-27 August 1982, 9:9479 (R;XA)
Characterization of sporozoite surface antigens of Plasmodium falciparum, using monoclonal antibodies. Part of a coordinated programme on the preparation of irradiated vaccines against some human diseases. Final report for the period 1 October 1980 - 31 August 1982, 9:10836 (R;XA)
Fate and persistence of ^{14}C pesticide residues in different soils: effects of ^{14}C pesticide contaminated run-off soil water on biological systems. Part of a coordinated programme on isotopic-tracer-aided studies of agrochemical residue - soil biota

interactions. Final report for the period 1 August 1977 - 31 August 1982, 9:10837 (R;XA)
Guide on a national system for collecting, assessing and disseminating information on safety-related events in nuclear power plants. A pre-publication working document, 9:9888 (R;XA)
Interaction of pesticides and microorganisms in aquatic ecosystems. Part of a coordinated programme on isotopic-tracer-aided research and monitoring on agricultural residue-biological interactions in aquatic ecosystems. Final report for the period 1 November 1980 - 30 June 1982, 9:10741 (R;XA)
Isotope characterization of the water vapour in the Amazon region. Final report for the period 1 August 1979 - 31 July 1982, 9:10642 (R;XA)
Non-destructive multielement analysis of airborne particulates by means of instrumental neutron activation method. Final report for the period 1 December 1975 - 28 February 1981, 9:10314 (R;XA)
Nuclear risk assessment and public acceptance. Final report for the period 1 December 1979-30 November 1982, 9:9968 (R;XA)
Perceived risk of nuclear and hydro electrical power generation in Colombia. Final report for the period 1 July 1980-31 January 1983, 9:9969 (R;XA)
Persistence of organophosphorus pesticides in aquatic environments. Coordinated programme on isotope-tracer-aided research and monitoring on agricultural residue - biological interactions in aquatic environment. Final report for the period 1 July 1976 - 31 July 1982, 9:10740 (R;XA)
Radioisotope tracer application in surface and groundwater flow measurements. Final report for the period 1 January 1979 - 30 September 1982, 9:10953 (R;XA;In Russian)
Regional and global environmental behaviour of radionuclides from the nuclear fuel cycle. Report of the advisory group meeting on pathways for radionuclide releases of regional and world-wide interest organized by the IAEA held in Vienna, 2-5 June 1981, 9:10686 (R;XA)
Research within the coordinated programme on comparison of methods of "age" determination of ground water based on decay of long-lived radioisotopes, especially 32-Si. Final report for the period 1 June 1979 - 31 January 1982, 9:10954 (R;XA)
Study of radionuclides interaction with hydrophytocenosis. Part of a coordinated programme on isotopic-tracer-aided research and monitoring on agricultural residue-biological interactions in aquatic ecosystems. Final report for the period 1 January 1977 - 3 June 1982, 9:10848 (R;XA)
Use and maintenance of nuclear medicine instruments in Southeast Asia. Results of a survey conducted by the Medical Applications Section of the IAEA, 9:10796 (R;XA)
Utilization of particle fuels in different reactor concepts. Survey of world experience, 9:9846 (R;XA)

Growth and characterization of single crystal (Cd, Zn)S thin films relevant to the study of the (Cd, Zn)S/Cu/sub x/S photovoltaic cell, 9:9599 (R;US)
H^- production from different metallic converter surfaces, 9:11323 (R;US)
Interactive parallel processor for data analysis, 9:10608 (R;US)
Lie algebraic methods for particle tracking calculations, 9:10494 (R;US)
Local structure of manganese in the photosynthetic apparatus and superoxide dismutase: an x-ray absorption study, 9:10772 (R;US)
Meson radiation from quark-gluon plasma, 9:11081 (R;US)
Molecular ion photofragment spectroscopy, 9:10380 (R;US)
Molecular surface science of heterogeneous catalysis. History and perspective, 9:10240 (R;US)
Multiplication of processing capacity with a parallel processor array, 9:11384 (R;US)
Numerical simulation of flame propagation in a closed vessel, 9:10391 (R;US)
Operation of a computer aided drafting system: improvements, results and hopes, 9:11385 (R;US)
Plastic box: a 4π detector for intermediate energy heavy ion physics, 9:10609 (R;US)
Reversible intercalation of graphite by fluorine and related synthetic and thermodynamic studies, 9:10297 (R;US)
Search for right-handed currents in muon decay, 9:11057 (R;US)
Seismic Safety Guide, 9:10443 (R;US)
Solid electrolyte degradation: problems and solutions, 9:9955 (R;US)
Some nitrogen-14 NMR studies in solids, 9:10350 (R;US)
Status of the Lawrence Berkeley Laboratory and the Lawrence Livermore National Laboratory (LLNL) free electron laser (FEL). Revision 1, 9:10496 (R;US)
Technology of high luminosity detectors, 9:10610 (R;US)
Thermodynamic coupling of heat and matter flows in near-field regions of nuclear waste repositories, 9:9482 (R;US)
Use of phase transformations in the design of alloy steel, 9:10239 (R;US)
Lawrence Livermore National Lab., CA (USA)
Alterant geophysical tomography, 9:10963 (R;US)
Application of positron annihilation, electron paramagnetic resonance and thermogravimetric techniques to the study of uranium oxidation, 9:10247 (R;US)
BAGI: a new concept for detecting and tracking hazardous gases, 9:10336 (R;US)
Calculation of density profiles in tandem mirrors fueled by pellets, 9:11334 (R;US)
Code ALICE B and B: a precompound/evaporation fission code emphasizing neutron yields, 9:11143 (R;US)

Comparisons of hydrodynamic beam models with kinetic treatments. Revision 1, 9:10497 (R;US)
Computer assessment of electromagnetic means of detecting approaching cruise missiles, 9:10454 (R;US)
Concentrations of copper-binding proteins in livers of bluegills exposed to increased concentrations of soluble copper, 9:10931 (R;US)
Corrosion test plan to guide canister material selection and design for a tuff repository, 9:10246 (R;US)
Coyote series data report LLNL/NWC 1981 LNG spill tests dispersion, vapor burn, and rapid-phase-transition. Volume 1, 9:9373 (R;US)
Cytogenetic characterization of the CHO mutant EM9, 9:10773 (R;US)
Development of soft x-ray streak cameras at Lawrence Livermore National Laboratory, 9:11248 (R;US)
Electric air filtration: theory, laboratory studies, hardware development, and field evaluations, 9:10473 (R;US)
End cell I & C requirements for operating tandem mirror reactors, 9:11185 (R;US)
Feasibility studies of a carbon/oxygen logging tool for evaluating the CO_2 content of the medium in nuclear device containment, 9:10635 (R;US)
Flow visualizations, velocity measurements, and surface convection measurements in simulated 20.8-cm Nova box amplifier cavities, 9:11331 (R;US)
Generalization of the numerical Schwarz algorithm, 9:11392 (R;US)
Generation of H^-, D^- ions on composite surfaces with application to surface/plasma ion source systems, 9:11336 (R;US)
Heat conduction analog model of urban fire spread, 9:11399 (R;US)
High frequency acoustic instabilities in heated fluids, 9:11048 (R;US)
Initial simultaneous Thomson-scattering measurements in the TMX-U tandem mirror, 9:11247 (R;US)
Intense positron beams: linacs. Preworkshop copy, 9:9530 (R;US)
Mechanical Engineering Research Program. Quarterly progress report, April-June 1983, 9:10441 (R;US)
MFTF-B quasi-optical ECRH transmission system, 9:11338 (R;US)
Modeling antennas near to and penetrating a lossy interface, 9:10457 (R;US)
Monte-Carlo calculations of forward directed bremsstrahlung produced by 20 and 45 MeV electrons on tungsten, 9:11148 (R;US)
NOVA laser facility for inertial confinement fusion, 9:11337 (R;US)
Numerical simulations of compliant material response to turbulent flow, 9:10431 (R;US)
Partitioning of copper among copper-binding proteins in the mussel Mytilus edulis exposed to soluble copper, 9:10935 (R;US)
Physical modeling of EM propagation over nonhomogeneous terrain, 9:10456 (R;US)
Pressure drop considerations of a lithium cooled fusion breeder tokamak reactor blanket, 9:11333 (R;US)
Probability problems in seismic risk analysis and load combinations for nuclear power plants, 9:9916 (R;US)
Radiation-induced electrical breakdown of helium in fusion reactor superconducting magnet systems, 9:11339 (R;US)
Reconnection in Spheromak formation and sustainment, 9:11341 (R;US)
Reevaluation of ENDL of σ(n,f) and anti nu/sub p/ for ^{235}U and ^{239}Pu from 100 keV to 20 MeV, 9:11139 (R;US)
Review of the impact of copper released into freshwater environments, 9:10742 (R;US)
Seismic review of vault for MFTF upgrade project, 9:11332 (R;US)
Seismic upgrade of Building 311, 9:10406 (R;US)
Status of the Lawrence Berkeley Laboratory and the Lawrence Livermore National Laboratory (LLNL) free electron laser (FEL). Revision 1, 9:10496 (R;US)
Study of parameters important to soil-structure interaction in seismic analyses of nuclear power plants, 9:9915 (R;US)
Summary of computational support and general documentation for computer code (GENTREE) used in Office of Nuclear Waste Isolation Pilot Salt Site Selection Project, 9:9492 (R;US)
Superconducting (radiation hardened) magnets for mirror fusion devices, 9:11340 (R;US)
Three-dimensional graphics for scientific data display and analysis, 9:10308 (R;US)
USI A-40 value/impact assessment, 9:9910 (R;US)
Vacuum outgassing of various materials, 9:10445 (R;US)
Volume generation of negative ions in high density hydrogen discharges, 9:11335 (R;US)

Lehigh Univ., Bethlehem, PA (USA). Dept. of Chemistry
Determination of the surface reactivity of coal powders. Fifth quarterly report, September 1, 1983-November 30, 1983, 9:9262 (R;US)

Linkoeping Univ. (Sweden). Dept. of Mechanical Engineering
Strategy for optimization of wind energy systems, 9:9752 (R;SE)

Linkoeping Univ. (Sweden). Matematiska Institutionen
Formal specification and implementation of operations in information management systems, 9:11397 (R;SE)

Little (Arthur D.), Inc., Cambridge, MA (USA)
Assessment of internal combustion engines as drivers for heat pumps. Final report, 9:10072 (R;US)
Catalog of selected heavy duty transport energy management models, December 1982-November 1983, 9:10131 (R;US)

Los Alamos National Lab., NM (USA)
Comparison of remotely acquired deep-body and subdermal temperature measurements for detecting fever in cattle, 9:10771 (R;US)
Computer simulation of reconnection in planetary magnetospheres, 9:10985 (R;US)
Cray/VAX interactive graphics system, 9:11383 (R;US)
Current sensing in magnetic fusion experiments by Faraday rotation in single-mode optical fibers, 9:11229 (R;US)
Development of CO_2 and KrF gas lasers as drivers for inertial confinement fusion, 9:11317 (R;US)
Development of the VLS process for SiC whisker growth, 9:10271 (R;US)
Electrical design of a high current density air-core reversed-field pinch ZTP, 9:11320 (R;US)
Experiment in benchmarking database systems, 9:11396 (R;US)
Family of almost periodic Schroedinger operators, 9:11175 (R;US)
Gaseous fuel safety assessment for light-duty automotive vehicles, 9:10196 (R;US)
Interactive benchmark comparison between a VAX 11/780 and a VAX 11/782, 9:11382 (R;US)
Little Boy replication: justification and construction, 9:10638 (R;US)
Los Alamos National Laboratory/New Mexico State University filter plugging test facility: description and preliminary test results, 9:10472 (R;US)
Los Alamos real-time and digital radiography plans, 9:10631 (R;US)
Magnetic field topologies of the relaxed states of turbulent discharges, 9:11316 (R;US)
Observations of the interstellar ice grain feature in the Taurus molecular clouds, 9:10978 (R;US)
Particle and field signatures of substorms in the near magnetotail, 9:10986 (R;US)
Particulate oil shale inhalation and pulmonary inflammatory response in rats, 9:10926 (R;US)
Pattern formation by shock processes, 9:11046 (R;US)
Plasma engineering design of a compact reversed-field pinch reactor (CRFPR), 9:11321 (R;US)
Poloidal field system design for the ZT-H reversed field pinch experiment, 9:11318 (R;US)
Reference materials for nondestructive assay of special nuclear material. Volume 2. Thin metal foils of highly enriched uranium, 9:9524 (R;US)
Safeguards and security. Progress report, August 1982-January 1983, 9:9521 (R;US)
Semigroup associated with a quasi-linear system in which the coupling is linear, 9:11181 (R;US)
Simulation of betatron-synchrotron coupling, 9:10493 (R;US)
Stability of planar multifluid plasma equilibria by Arnold's method, 9:11047 (R;US)
Stark spectroscopy of hydrogen lines in turbulent plasma. 1. Low-frequency turbulence, 9:11250 (TG;US)
Studies of altered vitrophyre for the prediction of nuclear waste repository - induced thermal alteration at Yucca Mountain, Nevada, 9:9481 (R;US)
Study of turbulence of plasma of a rapid linear theta-pinch according to the Stark broadening of the spectral lines of deuterium, 9:11251 (TG;US)

Time reversal invariance in polarized neutron beta decay, 9:11086 (R;US)
Toroidal magnetic field system for a 2-MA reversed-field pinch experiment, 9:11319 (R;US)
Louisiana Geological Survey, Baton Rouge (USA)
Louisiana peat resources. Final technical report, 1 April 1981-15 April 1983, 9:9289 (R;US)
Louisiana State Univ., Baton Rouge (USA). Dept. of Geology
Subsidence in coastal Louisiana: causes, rates, and effects on wetlands, 9:10727 (R;US)
Louisiana Universities Marine Consortium, Chauvin (USA)
Subsidence in coastal Louisiana: causes, rates, and effects on wetlands, 9:10727 (R;US)
Lund Univ. (Sweden). Dept. of Obstetrics and Gynaecology
Malignant tumours of the vulva. A study of the effects of radiotherapy, surgery and cho-emotherapy in combination or used alone, 9:10804 (R;SE)
Lund Univ. (Sweden). Dept. of Orthopaedics
Femoral head vitality after intracapsular hip fracture. 490 cases studied by intravital tetracyclic labeling and Tc-MDP radionuclide scintimetry, 9:10803 (R;SE)
Lund Univ. (Sweden). Fysiska Institutionen
Production of negative ion beams by charge exchange at the 3UDH Pelletron accelerator in Lund; ion-optical calculations for different geometries, 9:10516 (R;SE;In Swedish)
Lund Univ. (Sweden). Institutionen foer Astronomi
Physical processes in young supernovae, 9:10979 (R;SE;In Swedish)

M

Mannheim Univ. (Germany, F.R.). Fakultaet fuer Volkswirtschaftslehre und Statistik
Supply response of resource extracting firms to pre-announced price changes, 9:9981 (R;DE)
Manville Service Corp., Denver, CO (USA)
Acoustical benefits resulting from insulation and air leakage control in family housing units. Final report Jul 1981-Sep 1982, 9:10056 (R;US)
Marburg Univ. (Germany, F.R.). Fachbereich Geowissenschaften
Electron density distribution in α-oxalic acid dihydrate. An X-ray and neutron scattering investigation at low temperatures, 9:10294 (R;DE;In German)
Maryland Univ., Baltimore (USA)
Assessment of health and environmental effects of energy sources. Final report, 9:10640 (R;US)
Maryland Univ., College Park (USA)
Lie algebraic methods for particle tracking calculations, 9:10494 (R;US)
Preservation of fresh solid foods by gas exchange. Final report of Phase I, 9:10138 (R;US)
Massachusetts Inst. of Tech., Cambridge (USA)
Control of molting in crustacea, 9:10763 (R;US)
Implementation of MACLISP on a large address space computer. Final report, 9:11369 (R;US)
Modeling of lithium and lithium-lead reactions in air using LITFIRE, 9:11325 (R;US)
Photochemical energy storage: studies of inorganic photoassistance agents. Progress report, November 30, 1982-November 29, 1983, 9:9593 (R;US)
Massachusetts Inst. of Tech., Cambridge (USA). Dept. of Nutrition and Food Science
Comparative mutagenesis of human cells in vitro and in vivo. Progress report and financial statement, 9:10768 (R;US)
Massachusetts Inst. of Tech., Cambridge (USA). Lab. for Computer Science
Introduction to NIL, 9:11373 (R;US)
NIL notes for release 0.259, 9:11372 (R;US)
Massachusetts Univ., Amherst (USA). Dept. of Mechanical Engineering
Investigation of the aerodynamics of horizontal-axis wind turbine rotors. Final technical report, 9:9745 (R;US)
Massachusetts Univ., Amherst (USA). Materials Research Lab.
Radiolysis of resist polymers. 1. Poly(methyl-alpha-haloacrylates) and copolymers with methylmethacrylate. Technical report, 9:10382 (R;US)
Radiolysis of resist polymers. III. Copolymers of methyl-alpha-chloroacrylate and trihaloethylmethacrylates. Technical report, 9:10383 (R;US)
Mathematica Policy Research, Inc., Washington, DC (USA)
Estimating household energy expenditures in the Phase I Comprehensive Human Resources Data System. Task 11 final report, 9:9978 (R;US)
Extending the CHRD System into a microanalytic model of the US economy: a literature review and preliminary design, 9:9979 (R;US)
Household impacts of gasoline decontrol, 9:9980 (R;US)
Mathtech, Inc., Princeton, NJ (USA)
Benefits analysis of alternative secondary national ambient air quality standards for sulfur dioxide and total suspended particulates. Volume 1. Final report, 9:10697 (R;US)
Benefits analysis of alternative secondary national ambient air quality standards for sulfur dioxide and total suspended particulates. Volume 4. Final report, 9:10699 (R;US)
Benefits analysis of alternative secondary national ambient air quality standards for sulfur dioxide and total suspended particulates. Volume 2. Final report, 9:10698 (R;US)
Benefits analysis of alternative secondary national ambient air quality standards for sulfur dioxide and total suspended particulates. Volume 6. Final report, 9:10701 (R;US)
Benefits analysis of alternative secondary national ambient air quality standards for sulfur dioxide and total suspended particulates. Volume 5. Final report, 9:10700 (R;US)

Title list of documents made publicly available, September 1-30, 1983. Volume 5, No. 9, 9:10011 (R;US)
Nuclear Regulatory Commission, Washington, DC (USA). Office for Analysis and Evaluation of Operational Data
Report to Congress on abnormal occurrences, April-June 1983. Vol. 6, No. 2, 9:9895 (R;US)
Nuclear Regulatory Commission, Washington, DC (USA). Office of Nuclear Reactor Regulation
Safety evaluation report related to steam generator repair at H.B. Robinson Steam Electric Plant, Unit No. 2. Docket No. 50-261, 9:9902 (R;US)
Safety evaluation report related to the operation of LaSalle County Station, Units 1 and 2, (Docket Nos. 50-373 and 50-374). Supplement No. 7, 9:9897 (R;US)
Safety evaluation report related to the operation of WPPSS Nuclear Project No. 2, (Docket No. 50-397). Supplement No. 4, 9:9899 (R;US)
Safety evaluation report related to the operation of Limerick Generating Station, Units 1 and 2 (Docket Nos. 50-352-50-353). Supplement 1, 9:9900 (R;US)
Safety evaluation report related to the operation of Braidwood Station, Units 1 and 2 (Docket Nos. 50-456 and 50-457), 9:9901 (R;US)
Safety evaluation report related to the operation of Shearon Harris Nuclear Power Plant, Units 1 and 2. Docket Nos. STN 50-400 and STN 50-401, 9:9903 (R;US)
Safety evaluation report related to the operation of Wolf Creek Generating Staton, Unit No. 1, (Docket No. STN 50-482). Supplement No. 4, 9:9898 (R;US)
Nuclear Regulatory Commission, Washington, DC (USA). Office of Nuclear Regulatory Research
Staff analysis of public comments on proposed rule 10 CFR Part 60, Disposal of High-Level Radioactive Wastes in Geologic Repositories, 9:9483 (R;US)
Nuclear Regulatory Commission, Washington, DC (USA). Office of Resource Management
Licensed operating reactors. Status summary report, data as of 7-31-83. Volume 7, No. 8, 9:10010 (R;US)
Licensed operating reactors: status summary report, data as of September 30, 1983. Volume 7, No. 10, 9:9771 (R;US)
Regulatory licensing: status summary report, November 1-30 1983. Volume 12, No. 11, 9:10013 (R;US)
Regulatory licensing: status summary report, October 1-31, 1983. Volume 12, No. 10, 9:10012 (R;US)
Summary information report. Volume 2, 9:9827 (R;US)
Systematic evaluation program. Status summary report. Volume 5, No. 10, 9:9896 (R;US)
Nuclear Regulatory Commission, Washington, DC (USA). Office of State Programs
Impacts of NRC programs on state and local governments, 9:9828 (R;US)

O

Oak Ridge Associated Universities, Inc., TN (USA)
Sensitive collinear laser spectroscopy on fast atom and ion beams, 9:10574 (R;US)
Oak Ridge Gaseous Diffusion Plant, TN (USA)
Consolidated fuel reprocessing program: a guide for reliability and maintainability data acquisition, 9:9445 (R;US)
Liquid-phase compositions from vapor-phase analyses. I. Thermodynamic properties at UF_6 and some of its potential impurities, 9:10349 (R;US)
Oak Ridge National Lab., TN (USA)
Acid rain and tree physiology: an overview of some possible mechanisms of response, 9:10918 (R;US)
Acute, chronic and reproductive effects of petroleum and two petroleum substitutes on the large milkweed bug, Oncopeltus fasciatus, 9:10933 (R;US)
Algorithm to calculate proportional area transformation factors for digital geographic databases, 9:11368 (R;US)
Army Civilian Personnel System (ACPERS): functional description. Automated Data Systems Manual, 9:11358 (R;US)
Characteristics of a long-pulse (30-s), high-power (4-MW) ion source for neutral beam injection, 9:11271 (R;US)
Computer simulation of magnetic field circuits in ATF, 9:11269 (R;US)
Consolidated fuel reprocessing program: a guide for reliability and maintainability data acquisition, 9:9445 (R;US)
Control of molting in crustacea, 9:10763 (R;US)
2D accelerator design for SITEX negative ion source, 9:11267 (R;US)
DCT-8 pumped limiter design considerations, 9:11264 (R;US)
Design considerations for achieving high vacuum integrity in fusion devices, 9:11266 (R;US)
Design description of the helical field coils for the Advanced Toroidal Facility, 9:11276 (R;US)
Development of a promising filtration method for liquid clarification in nuclear facilities, 9:9879 (R;US)
Development of an ion source for long-pulse (30-s) neutral beam injection, 9:11262 (R;US)
Diagnostic protection techniques in steady state, high power RF and microwave, 9:11183 (R;US)
DNA target sites associated with chemical induction of dominant-lethal mutations and heritable translocations in mice, 9:10917 (R;US)
Empirical scaling formulas for critical current and critical field for commercial NbTi, 9:11263 (R;US)
End cell I & C requirements for operating tandem mirror reactors, 9:11185 (R;US)
Experience with Zr-Al getter pumps in the ISX-B tokamak, 9:11265 (R;US)
Final report on the decontamination of the Curium Source Fabrication Facility, 9:9487 (R;US)
FORAST: a regional scale study of forest responses to air pollutants, 9:10653 (R;US)
Fusion-relevant basic radiation effects: theory and experiment, 9:10219 (R;US)
High-temperature gas-cooled reactor safety studies for the Division of Accident Evaluation. Quarterly progress report, April 1-June 30, 1983. Volume 2, 9:9911 (R;US)
Industrial Safety and Applied Health Physics Division, annual report for 1982, 9:10951 (R;US)
Integrated palm oil processing, 9:9535 (R;US)
Integrating forest-stand simulations with paleoecological records to examine long-term forest dynamics, 9:10703 (R;US)
Kinetic study of ethanol production by Zymomonas mobilis, 9:9558 (R;US)

Limnological and ecological changes associated with reservoir aging, 9:10736 (R;US)
MHD activity in the ISX-B tokamak: experimental results and theoretical interpretation, 9:11187 (R;US)
Monte Carlo methods for optimizing torsatron configurations, 9:11184 (R;US)
Mutagenic properties of O^6-methylguanine in DNA in vivo and in vitro, 9:10764 (R;US)
National RF Test Facility as a multipurpose development tool, 9:11270 (R;US)
New vistas of heavy-ion reactions with the spin spectrometer, 9:10611 (R;US)
Nuclear power plant operating experience. Volume 1. Annual report, 1981, 9:10014 (R;US)
ORNL grouting technologies for immobilizing hazardous wastes, 9:9469 (R;US)
ORNL integrated forecasting system, 9:10033 (R;US)
Parametric system studies of candidate TF coil system options for the Tokamak Fusion Core Experiment (TFCX), 9:11272 (R;US)
Pretest predictions for degraded shutdown heat-removal tests in THORS-SHRS Assembly 1, 9:9882 (R;US)
Quality assurance aspects of the major procurements for the Large Coil Test Facility, 9:11275 (R;US)
Quantitative and molecular analyses of mutation in a pSV2gpt transformed CHO cell line, 9:10843 (R;US)
Radiological assessment. A textbook on environmental dose analysis, 9:10691 (R;US)
Reaching people with energy conservation information: four statewide residential case studies, 9:10177 (R;US)
Reactor assessments of advanced bumpy torus configurations, 9:11278 (R;US)
Residential Conservation Service installer's guide, 9:10082 (R;US)
Resource materials developed in support of the residential conservation service rule issued on November 7, 1979, 9:10064 (R;US)
Role of toxicological interactions in chemical carcinogenesis, 9:10919 (R;US)
Shielding considerations for multi-GeV/nucleon heavy ion accelerators: the introduction of a new heavy ion transport code, HIT, 9:10517 (R;US)
Short- and long-term leaching of solid wastes from the H-coal coal liquefaction process, 9:9281 (R;US)
Space reactor shielding: an assessment of the technology, 9:9823 (R;US)
Status of the Magnetic Fusion Energy Programme, 9:11281 (R;US)
Status report: solid waste management, 9:9316 (R;US)
Technological requisites of the magnetic fusion energy programme, 9:11280 (R;US)
Thermal shock considerations for the TFCX limiter and first wall, 9:11273 (R;US)
Typographical terminology, 9:11359 (R;US)
Use of fixed-film, anaerobic bioreactors for energy-conserving treatment of meatpacking wastewaters, 9:10133 (R;US)
Your home energy audit: the first step to more energy-efficient living, 9:10063 (R;US)

Oesterreichisches Forschungszentrum Seibersdorf G.m.b.H.
Concentration of heavy metals in water plants of some Austrian running waters, 9:10932 (R;AT;In German.)

Oesterreichisches Inst. fuer Raumplanung, Vienna
Land use survey for Austria - basic instrument to determine and to safeguard natural and economic resources in terms of land, especially with regard to energy recovery from biomass. 1st project stage, 9:9996 (R;AT;In German)

Office of Technology Assessment (U.S. Congress), Washington, DC
Energy efficiency of buildings in pities. Volume 2. Working papers. Paper No. 1. Fostering equity in urban conservation: utility metering and utility financing. Part 1. Utility metering. Part 2. Utility financing. Paper No. 2. Case studies of building energy efficiency in five U.S. cities: Buffalo, Des Moines, Jersey City, San Antonio, Tampa, 9:10076 (R;US)
Technologies and management strategies for hazardous waste control. Summary report, 9:9994 (R;US)

Oklahoma State Univ., Stillwater (USA)
Characterization and treatment of aqueous wastes and residue from petroleum refineries. Final report 1 Oct 79-30 Sep 82, 9:9346 (R;US)

Oklahoma Univ., Norman (USA). Energy Resources Inst.
System development/operation and data collection/reconcilation for forms EIA-23 and EIA-64A. Final closeout report, July 15, 1978-September 30, 1981, 9:9334 (R;US)
System development/operation and data collection/reconciliation for forms EIA-23 and EIA-64A. Final report: 1979 report year processing, May 15, 1980-May 15, 1981, 9:9335 (R;US)

Orleans Univ., 45 (France)
Ion and electron injection in ionosphere and magnetosphere. Application to the parallel electric field measurement in auroral zones, 9:10983 (R;FR;In French)

Owens-Illinois, Inc., Toledo, OH (USA)
Investigation of the nature of semisynthetic esterases. Annual progress report, September 15, 1982-September 14, 1983, 9:10766 (R;US)

Oxford Univ. (UK). Nuclear Physics Lab.
Folding model analysis of alpha-particle elastic scattering with a semirealistic density dependent effective interaction, 9:11124 (R;US)
Lepton spectroscopy, 9:11082 (R;US)

P

Pacific Northwest Lab., Richland, WA (USA)
Acoustic emission monitoring of ZB-1 intermediate scale vessel test, 9:9839 (R;US)
Architecture for a user interface management system, 9:11387 (R;US)
Chemical and biological effects of heavy distillate recycle in the SRC-II process, 9:9238 (R;US)
Epidemiologic aspects of neural tube defects in the United States: changing concepts and their importance for screening and prenatal diagnostic programs, 9:10828 (R;US)
Estimated health effects from a regionwide weatherization program, 9:10934 (R;US)
Further validation of equilibrium thermodynamic speciation of uranium by analytical determination of anionic, cationic, and neutrally charged groups, 9:10968 (R;US)
Hanford atmospheric dispersion data: 1960 through June 1967, 9:10660 (R;US)
International program to study subseabed disposal of high-level radioactive wastes, 9:9488 (R;US)
Master schedule for CY-1984 Hanford environmental surveillance routine sampling program, 9:10692 (R;US)
Model for the iodine-induced strain rate sensitivity of Zircaloy fuel rod cladding, 9:9850 (R;US)
Passive neutron counter for determination of transuranics in high gamma activity samples, 9:10612 (R;US)
Recommended radiation protection practices for low-level waste disposal sites, 9:9519 (R;US)
Status of the Battelle-Carolina ^{76}Ge double beta decay experiment, 9:10613 (R;US)
Suppression pool modeling, 9:9912 (R;US)
Thermal-power nuclear reactor, 9:9830 (TG;US)
Thermophysical behavior of St. Peter sandstone: application to compressed air energy storage in an aquifer, 9:9943 (R;US)
Variable user interface construction techniques, 9:11386 (R;US)

Paris-11 Univ., 91 - Orsay (France)
High transverse momentum π^0 and direct photon photoproduction, 9:11056 (R;FR;In French)
Measurement of electron cyclotron emission on the T.F.R. Tokamak. Application to the study of disruptions, 9:11191 (R;FR;In French)

Paris-11 Univ., 91 - Orsay (France). Inst. de Physique Nucleaire
Cross section for inclusive deep inelastic scattering in the impulse approximation: scale invariance and mass problems, 9:11077 (R;FR;In French)
Neutron dose equivalent rates due to heavy ion beams, 9:11155 (R;FR)

Paris-11 Univ., 91 - Orsay (France). Lab. de l'Accelerateur Lineaire
High transverse momentum π^0 and direct photon photoproduction, 9:11056 (R;FR;In French)
Second order effects of a sextupolar field on betatron oscillations in a storage ring, 9:10563 (R;FR)
Techniques for longitudinal polarisation in electron storage rings, 9:10562 (R;FR)

Pennsylvania State Univ., University Park (USA). Coal Research Section
Data base for the analysis of compositional characteristics of coal seams and macerals. Technical progress report, August 1982-January 1983, 9:9261 (R;US)

Pittsburgh Univ., PA (USA). Dept. of Chemical and Petroleum Engineering
Cation promotion effects in zeolite-supported F-T catalysts. First quarterly report, September-November 1983, 9:9538 (R;US)
Promotion effects on the synthesis of higher alcohols. Fifth quarterly report, September 1983-November 1983, 9:9547 (R;US)
Thermodynamic behavior of coal liquids in the presence of coal solids characterization of IOM and ash. First quarterly progress report, August 1-November 1, 1983, 9:9234 (R;US)

Pittsburgh Univ., PA (USA). Graduate School of Public Health
Noise attenuating properties of earmuffs worn by miners. Volume 2. Development of a laboratory procedure for the physical measurement of earmuff attenuation. Open file report 1 Jul 1979-30 Jun 1980, 9:10952 (R;US)
Noise attenuating properties of earmuffs worn by miners. Volume 1. Comparison of earmuff attenuation as measured by psychophysical and physical methods. Open file report (final) Jan-Oct 1979, 9:10702 (R;US)

Plank (Don), St. Petersburg, FL (USA)
Solar-powered postage stamp: an artist's energy statement, 9:9659 (R;US)

Podlasek (R.J.), Springfield, IL (USA)
Cogeneration systems reliability data base feasibility study. Final report Aug 1982-May 1983, 9:10016 (R;US)

Policy Planning and Evaluation, Inc., McLean, VA (USA)
Energy savings by recovered materials use in the copper industry , 9:10139 (R;US)

Portland Cement Association, Skokie, IL (USA). Construction Technology Labs.
Heat transfer characteristics of a low density concrete wall. Final report, 9:10073 (R;US)

Preston Polytechnic (UK). Div. of Physics and Astronomy
Observations of the interstellar ice grain feature in the Taurus molecular clouds, 9:10978 (R;US)

Princeton Univ., NJ (USA)
Cavity launchers for ICRF, 9:11292 (R;US)

Princeton Univ., NJ (USA). Plasma Physics Lab.
Analytic representation of three-dimensional stellarator field, 9:11326 (R;US)
Attainment of high confinement in neutral beam heated divertor discharges in the PDX tokamak, 9:11233 (R;US)
Island formation and destruction of flux surfaces in three-dimensional MHD equilibria, 9:11328 (R;US)
Measurements of the hydrogenic recombination coefficient for the TFTR vacuum vessel, 9:11230 (R;US)
Parametric excitation of ion Bernstein waves by a fast wave antenna in the ion cyclotron frequency range, 9:11231 (R;US)
Particle and heat flux measurements in PDX edge plasmas, 9:11235 (R;US)
Preliminary semiempirical transport models, 9:11232 (R;US)
Stability of n = 1 internal modes in tokamaks, 9:11234 (R;US)
TFTR initial operations, 9:11327 (R;US)
Vaporized wall material/plasma interaction during plasma disruption, 9:11188 (R;US)

Purdue Univ., Lafayette, IN (USA)
Decentralized control of large transient in power systems: theory and application, 9:9758 (R;US)
Numerical and theoretical investigations into a continuation approach to decentralized control, 9:11371 (R;US)

Purdue Univ., Lafayette, IN (USA). Dept. of Physics
Proposal for a free electron laser in the x-ray region, 9:10422 (R;US)

Purdue Univ., Lafayette, IN (USA). School of Mechanical Engineering
Laminarization effects on the dynamics of a disk levitated by incompressible fluid flow, 9:10424 (R;US)

Pyros, Inc., Gaithersburg, MD (USA)
Support service to the Office of Oil, Gas, Shale and Coal Liquids. Final report, 9:9218 (R;US)

R

Radian Corp., Austin, TX (USA)
Review of shell-and-tube heat exchanger fouling and corrosion in geothermal power plant service, 9:9736 (R;US)

Radian Corp., Salt Lake City, UT (USA)
Control technology assessment of selected petroleum refinery operations, 9:9333 (R;US)

Radiation Monitoring Devices, Inc., Watertown, MA (USA)
Low cost, sprayed $CuInSe_2$ solar cell research. First annual progress report, September 15, 1982-September 15, 1983, 9:9595 (R;US)

Radiochemistry Consultant Group, Vaestra Froelunda (Sweden)
Small scale studies of production of fissium aerosols, 9:9913 (R;SE)

Rationalisierungsverband des Steinkohlenbergbaus, Essen (Germany, F.R.)
Economic association of the coal mining industry, 9:9290 (R;DE;In German)

Renewable Energy, Inc., Paducah, KY (USA)
Market analyses relative to the Renewable Energy, Inc. ethanol plant feasibility study, 9:9545 (R;US)

Rensselaer Polytechnic Inst., Troy, NY (USA)
Kinetic measurements on elementary fossil fuel combustion reactions over wide temperature ranges. Progress report, 1 May-31 December 1983, 9:10379 (R;US)

Rensselaer Polytechnic Inst., Troy, NY (USA). Dept. of Materials Engineering
Application of positron annihilation, electron paramagnetic resonance and thermogravimetric techniques to the study of uranium oxidation, 9:10247 (R;US)

Rensselaer Polytechnic Inst., Troy, NY (USA). Dept. of Nuclear Engineering
Measurement of phase distribution phenomena in a triangular conduit, 9:10429 (R;US)

Research Consulting Associates, Lexington, MA (USA)
Windamper method of galloping control. Pt. I. Management overview. Final report, 9:9768 (R;US)
Windamper method of galloping control. Pt. II. Prediction of dynamic galloping. Final report, 9:9769 (R;US)

Research Triangle Inst., Research Triangle Park, NC (USA)
North Carolina rate demonstration project. Blue Ridge Electric Membership Corporation. Volume II. Results and conclusions, 9:10068 (R;US)
North Carolina rate demonstration project. Carolina Power and Light Company study. Project library Part 2. Volume 2, 9:10125 (R;US)
North Carolina rate demonstration project. Carolina Power and Light Company study. Project library Part 3. Volume 2, 9:10126 (R;US)
North Carolina rate demonstration project. Carolina Power and Light Company study. Volume I. Design and implementation, 9:10069 (R;US)
North Carolina Rate Demonstration Project: Blue Ridge Electric Membership Corporation. Volume I. Design and implementation, 9:10066 (R;US)
North Carolina Rate Demonstration Project: Carolina Power and Light Company study. Volume II. Results and conclusions, 9:10067 (R;US)
North Caroline rate demonstration project. Blue Ridge Electric Membership Corporation study. Project library. Volume 2, 9:10070 (R;US)

RE/SPEC, Inc., Rapid City, SD (USA)
Avery Island brine migration tests: installation, operation, data collection, and analysis, 9:10966 (R;US)

Rhode Island Univ., Kingston (USA). Dept. of Chemical Engineering
Study of multiphase flow useful to understanding scaleup of coal liquefaction reactors. Technical progress report, September 1-November 30, 1983, 9:9229 (R;US)

Rhode Island Univ., Narragansett (USA). Marine Geomechanics Lab.
Consolidation properties and stress history of some deep sea sediments, 9:10970 (R;US)

Rice Univ., Houston, TX (USA). Dept. of Mechanical Engineering
Metallurgical characterization of niobium/tin superconducting multifilamentary wires. Final report 1 Apr-31 Dec 1982, 9:10202 (R;US)

Rijksuniversiteit Leiden (Netherlands)
Angiography of the upper extremity, 9:10801 (R;NL)
Charge and spin density in s-stable rare earth intermetallic compounds, 9:11007 (R;NL)
Diagnosis of multiple sclerosis, 9:10798 (R;NL;In Dutch)
Enhanced nuclear magnetic resonance in a non-magnetic cubic doublet. A study performed with a ^{4}He-circulating dilution refrigerator, 9:10234 (R;NL)
Experimental study of praseodymium intermetallic compounds at low temperatures, 9:10233 (R;NL)
Fibrosarcoma of bone. A clinical-radiological investigation, 9:10800 (R;NL;In Dutch)
Influence of collisions with noble gases on spectral lines of hydrogen isotopes, 9:11006 (R;NL)
Nuclear cardiology. Fourier functional images in left ventricular wall motion analysis and an investigation into lesion detectability in myocardial perfusion scintigraphy, 9:10799 (R;NL)
Studies on the photochemistry of vision. Preparation of deuterated retinals; the study of deuterium labelled visual pigments, 9:10357 (R;NL)
Transverse tomography and radiotherapy. The use of computer tomography and transverse analog tomography for radiotherapy treatment planning, 9:10797 (R;NL;In Dutch)
Rijksuniversiteit Utrecht (Netherlands)
Fundamental aspects of laser and ion-beam interactions with solid surfaces, 9:11002 (R;NL)
Risoe National Lab., Roskilde (Denmark)
Analysis of data from the Gedser wind turbine, 1977-1979, 9:9747 (R;US)
Annual report 1982 chemistry department, 9:11363 (R;DK)
Biological effectiveness and application of heavy ions in radiation therapy described by a physical and biological model, 9:10806 (R;DK)
Blade- and rotor loads for VESTAS 15, 9:9756 (R;DK;In Danish)
Determination of local pin powers in the framework of nodal coarse-mesh solutions, 9:9775 (R;DK)
Example of progress and future perspectives in X-ray synchrotron diffraction studies, 9:10200 (R;DK)
Measurements on the Gedser wind mill, 1977-1979, 9:9746 (R;US)
Reports issued by the Risoe National Laboratory in the series: RISO-R reports and RISO-M reports, 9:11362 (R;DK)
Rochester Univ., NY (USA). Dept. of Microbiology
Inducible error-prone repair in B. subtilis. Progress report, May 1, 1983-April 30, 1984, 9:10844 (R;US)
Rockwell International Corp., Canoga Park, CA (USA). Energy Systems Group
Molten salt destruction of hazardous materials process and data update, 9:10654 (R;US)
Rockwell International Corp., Canoga Park, CA (USA). Energy Technology Engineering Center
Groundwater and geothermal: urban district heating applications, 9:9743 (R;US)
Rockwell International Corp., Canoga Park, CA (USA). Rocketdyne Div.
Coal slurry pump development. Fossil energy annual summary technical information report, 9:9224 (R;US)
Rogers, Golden and Halpern, Inc., Reston, VA (USA)
Gulf of Mexico summary report, 9:9327 (R;US)
Royal Inst. of Tech., Stockholm (Sweden). Dept. of Plasma Physics
Circuit effects on pierce instabilities, and double-layer formation, 9:11241 (R;SE)
Critical ionization velocity - a bibliography, 9:11239 (R;SE)
Critical ionization velocity mechanism for the case of gas mixture, 9:11238 (R;SE)
Inductive electric fields in the magnetotail and their relation to auroral and substorm phenomena, 9:10988 (R;SE)
Negative resistance of double layers, 9:10453 (R;SE)
Numerical double layer solutions with ionization, 9:11176 (R;SE)
Plasma physical aspects of the solar cycle, 9:10980 (R;SE)
Review of impact experiments on the critical ionization velocity, 9:11240 (R;SE)
Royal Inst. of Tech., Stockholm (Sweden). Plasma Physics and Fusion Research
Interaction of MHD waves with a plasma surrounded by a cold gas-mantle, 9:11246 (R;SE)
Royal Observatory, Edinburgh (UK)
Observations of the interstellar ice grain feature in the Taurus molecular clouds, 9:10978 (R;US)
Rutherford Appleton Lab., Chilton (UK)
Electron distributions in the plasmas of the earth's magnetosphere - an experiment for AMPTE-UKS, 9:10987 (R;GB)
Physics of laser compression of plasmas, 9:11236 (R;GB)

S

Safety Sciences, Inc., Washington, DC (USA)
Assessment of institutional barriers to the use of natural gas in automotive vehicle fleets, 9:10130 (R;US)
Saint John Fisher Coll., Rochester, NY (USA)
Multilevel relaxation phenomena and population trappings. Progress report, July 1, 1982-June 30, 1984, 9:10991 (R;US)
Sandia National Labs., Albuquerque, NM (USA)
Altering the application of the traditional systems lifecycle, 9:11388 (R;US)
Bootstrapping RSX-11S from ROM memories, 9:11390 (R;US)
CONTAIN calculations of severe accident sequences at the Surry Nuclear Power Plant, 9:9914 (R;US)
Light Water Reactor Safety Research Program. Semiannual report, April-September 1982, 9:9909 (R;US)
Materials licensing study, Phase 1. Volume 2. Findings and recommendations, 9:9523 (R;US)
Needs in drilling technology research and development, 9:9328 (R;US)
One solution to STAR-1100 in a dual machine environment, 9:11389 (R;US)
Program for the improvement of downhole drilling motors, 9:9739 (R;US)
Sandia Pulse Reactor-IV Project, 9:9868 (R;US)
SIMALIR: simulation of materials licensing review, 9:9522 (R;US)
Stresses and strains at Yucca Mountain from underground nuclear explosions, 9:10967 (R;US)
Total hemispherical emittance measurement apparatus for solar selective coatings, 9:9722 (R;US)
Transportation of radioactive material (RAM) to and from US nuclear power plants. Draft environmental assessment, 9:9452 (R;US)
X-ray line broadening studies on aluminum nitride, titanium carbide and titanium diboride modified by high pressure shock loading, 9:10265 (R;US)
Sandia National Labs., Livermore, CA (USA)
International Workshop on the Design, Construction, and Operation of Solar Central-Receiver Projects, 9:9689 (R;US)
SSPS Central Receiver System (CRS) midterm workshop, 9:9682 (R;US)
San Diego State Univ., CA (USA)
Offshore in-situ testing techniques, 1983, 9:9322 (R;US)
Sante Fe Corp., Alexandria, VA (USA)
Computer models for comparative assessment of cost and competitiveness of gas-fired space conditioning systems. Final report Jun 1981-Jun 1982, 9:10081 (R;US)
Savannah River Ecology Lab., Aiken, SC (USA)
Critical pathways of radionuclides to man from agro-ecosystems. Annual progress report, October 1981-September 1982, 9:10713 (R;US)
Science Applications, Inc., Boulder, CO (USA). Plasma Research Inst.
Magnetic fusion energy program. Final report, 9:11237 (R;US)
Tandem mirror coil optimization studies, 9:11330 (R;US)
Science Applications, Inc., La Jolla, CA (USA)
Laboratory and field acceptance performance of CONAC, 9:9264 (R;US)
Science Applications, Inc., McLean, VA (USA)
Active Program Research Requirements (APRR). Volume II. Appendix A. Cost Catalog. Final report, 9:9703 (R;US)
Science Research Council, Chilton (UK). Rutherford and Appleton Labs.
First measurement of efficiency and precision of CCD detectors for high energy physics, 9:10614 (R;GB)
Physics of particle acceleration, 9:10483 (R;GB)
Scientific Design Co., Inc., New York (USA)
Great Plains ASPEN model development. Technical progress report, November 1-30, 1983, 9:9225 (R;US)

Great Plains ASPEN model development. Technical progress report, October 1, 1983-October 31, 1983, 9:9226 (R;US)
Scientific Systems, Inc., Cambridge, MA (USA)
Qualitative methods in power system stability, 9:9757 (R;US)

WECS - load controlled pitch - variable load conversion to heat. Final report, 9:9750 (R;US)
Self-Reliance, Inc., Washington, DC (USA)
R,D and D needs of DHC technology: summary of R,D and D task recommendations, 9:10168 (R;US)
Research, development and demonstration needs of district heating technology. Final report, 9:10169 (R;US)
Signal UOP, Inc., Des Plaines, IL (USA). Research Center
Advanced NMR characterization of zeolite catalysts. First quarterly report, 1 September-30 November 1983, 9:10347 (R;US)
Skidaway Inst. of Oceanography, Savannah, GA (USA)
Biological processes in the water column of the South Atlantic Bight. Progress report, June 1982-June 1984, 9:10726 (R;US)
Trace element geochemistry of the South Atlantic Bight. Progress report, 9:10737 (R;US)
Solar Energy Research Inst., Golden, CO (USA)
1981 Solar Energy Technical Training Directory. Third edition, 9:9590 (R;US)
Advanced photovoltaic module costing manual, 9:9589 (R;US)
Analysis of a process for converting biomass to diesel fuel, 9:9539 (R;US)
Experimental approach to evaluating environmental degradation mechanisms in bisphenol-A polycarbonate films on metallic substrates, 9:9724 (R;US)
Guidebook to renewable energy technologies. Community renewable energy guidebook series, 9:9583 (R;US)
Microcomputer methods for solar design and analysis: passive and active systems, 9:9582 (R;US)
Photovoltaic R & D program at SERI. An overview report, 9:9609 (R;US)
R and D decision methods for photovoltaic program planning, 9:9611 (R;US)
Solar radiation energy resource Atlas of the United States, 9:9585 (R;US)
Solar Thermal Technology Program: polymer synthesis and characterization subtask. Annual progress report, FY 1983, 9:9723 (R;US)
Specification/cost data base: residential retrofit, 9:9705 (R;US)
Television interference measurements near the MOD-2 WT array at Goodnoe Hills, Washington, 9:9744 (R;US)
Thin-film photovoltaic research and development program of the Solar Energy Research Institute, 9:9610 (R;US)
Your home energy audit: the first step to more energy-efficient living, 9:10063 (R;US)
South Carolina Univ., Columbia (USA)
Status of the Battelle-Carolina ^{76}Ge double beta decay experiment, 9:10613 (R;US)
South Dakota School of Mines and Technology, Rapid City (USA). Dept. of Metallurgical Engineering
Direct utilization of geothermal energy in western South Dakota agribusiness. Final report, 9:9742 (R;US)
Southwest Research Inst., San Antonio, TX (USA)
Corrosion of metals in coal liquefaction processes. Final report, 9:9223 (R;US)
Identification of optimized techniques for operating motor vehicles. Final report, September 1980-September 1981, 9:10128 (R;US)
Identification of optimized techniques for operating motor vehicles. Executive summary, 9:10129 (R;US)
Study and modeling of high temperature fatigue crack propagation in austenitic stainless steel. Final report, September 1, 1979-November 30, 1983, 9:10223 (R;US)
Springborn Labs., Inc., Enfield, CT (USA)
Investigation of test methods, material properties, and processes for solar cell encapsulants. Twenty-fifth quarterly progress report, 9:9596 (R;US)
SRI International, Menlo Park, CA (USA)
Collisional mechanisms in D^- beam sources for MFE experiments and reactors. Technical progress report, 9:11285 (R;US)
Collisional mechanisms in D^- beam sources for MFE experiments and reactors. Progress report No. 16 for quarter ending December 31, 1983, 9:11286 (R;US)
Novel catalytic methods for heteroatom removal in coal liquids upgrading. Quarterly report No. 1, September 1-December 1, 1983, 9:9233 (R;US)
Staatliches Amt fuer Atomsicherheit und Strahlenschutz, Berlin (German Democratic Republic)
Dosimetry of incorporated transuranic radionuclides, 9:10890 (R;DD;In German)
Techniques for radiation protection monitoring of personnel at fusion reactors, 9:11329 (R;DD)
Stanford Linear Accelerator Center, CA (USA)
Charm and beauty lifetime measurements with the MARK II vertex detector, 9:11060 (R;US)
Emittance growth in the collider arcs due to transverse wakefields, 9:10495 (R;US)
Latest results from the MARK II at PEP, 9:11059 (R;US)
Mark III results from SPEAR, 9:11061 (R;US)
Measurement of the hadronic cross section in electron-positron annihilation, 9:11058 (R;US)
SLAC SPEAR beam line modules 1 through 18 (Engineering Materials), 9:10561 (E;US)
Stanford Univ., CA (USA). High-Energy Physics Lab.
Plastic box: a 4π detector for intermediate energy heavy ion physics, 9:10609 (R;US)
Statens Inst. for Straalehygiene, Oslo (Norway)
Administrative norms on radiofrequency radiation for occupationally exposed persons, 9:10947 (R;NO;In Norwegian)
^{137}Cs in Norwegian Lapps spring 1981, 9:10714 (R;NO;In Norwegian)
Dosestatistikk for yrkeseksponerte i 1981, 9:10715 (R;NO;In Norwegian)
Examination of radiofrequency radiation in the plastic and furniture industries, 9:10948 (R;NO;In Norwegian)
Statens Kaernkraftinspektion, Stockholm (Sweden)
Study of methods for testing the tubes of steam generators by means of Eddy Current, 9:9786 (R;SE;In Swedish)
Thermal fatigue of the T-pieces of feed water tubes, 9:9776 (R;SE;In Swedish, English, German)
Updating of actual technique for ultrasonic testing of austenitic stainless materials and welds, 9:10440 (R;SE;In Swedish)
Statens Naturvaardsverk, Solna (Sweden)
Acidifying and basic effects of nitrogen fertilizers on forest soil, 9:9615 (R;SE;In Swedish)
Effects of lake acidification on bird populations, 9:10743 (R;SE;In Swedish)
Hydrogeological conditions for leachate reduction at landfill sites, 9:10708 (R;SE;In Swedish)
Statens Raad foer Byggnadsforskning, Stockholm (Sweden)
Extracting heat from and storing heat in ground and water. Method of inventory and statement of natural conditions, 9:9948 (R;SE;In Swedish)
Extracting heat from and storing heat in ground and water. Legal aspects, 9:9949 (R;SE;In Swedish)
Influence of the dwelling habits on the consumption of energy in small houses, 9:10060 (R;SE;In Swedish)
Solar heated public outdoor swimming pools, 9:9694 (R;SE;In Swedish)
Solar heating by heat pump as a complement to an oil-heated plant in Gothenburg, 9:9693 (R;SE;In Swedish)
Statens Straalskyddsinstitut, Stockholm (Sweden)
Calibration of radon daughter recorders, 9:10615 (R;SE;In Swedish)
Gamma radiation in apartments, 9:10718 (R;SE;In Swedish)
Measuring stations for gamma radiation - measured results 1982, 9:10694 (R;SE;In Swedish, English)
Radiation doses from the release into the water of the Barsebaeck power plant, 9:9860 (R;SE;In Swedish)
Release of activity and ocupational exposures of the nuclear power industry. Third quarter 1982, 9:9861 (R;SE;In Swedish)
Survey of indoor radon concentrations in Sweden, 9:10693 (R;SE;In Swedish)
Statens Vattenfallsverk, Vaellingby (Sweden)
Program for parameter studies of steam generators, 9:9840 (R;SE;In Swedish)
Statens Vattenfallsverk, Vaellingby (Sweden). Projekt KOL-HAELSA-MILJOE
Basic pollutant emissions and their statistics of two coal fired boilers, 9:9765 (R;SE)

Bearing value and settlement of fly ash depositions from pressure metering and cone penetration tests, 9:9267 (R;SE;In Swedish)
Cleaning of coal by flotation, 9:9298 (R;SE;In Swedish)
Demand for lime and other raw materials in fluegas cleaning, 9:9268 (R;SE;In Swedish)
Effects of coal and oil fly ash on sister chromatid exchange (SCE) in a macrophage like cell line, 9:10923 (R;SE)
Effects of metal compounds on chromosome length, 9:10924 (R;SE)
Effects on soil and plants from trace elements in fly ash from coal-fired plants for energy production. A literature study, 9:9283 (R;SE;In Swedish)
Emissions from coal combustion and fuel oil combustion, 9:9266 (R;SE;In Swedish)
Environmental risks of oil and coal transport at sea. A comparative study., 9:9284 (R;SE;In Swedish)
Health effects due to the emission of mercury on the combustion of coal, 9:9319 (R;SE;In Swedish)
Kidney injuries and cadmium. Riskestimation concerning kidney injuries due to cadmium exposure, 9:10925 (R;SE;In Swedish)
Long-term study of a 240 MW coal powder fueled heat electric station, 9:9282 (R;SE;In Swedish)
Measurements of suspended particles and particle deposition. Methods and evaluation of methods, 9:10656 (R;SE;In Swedish)
Mutagenicity in emissions from coal and oil fired boilers as detected by the salmonella/microsome assay, 9:10657 (R;SE)
Mutagenicity tests of flue gas emissions from coal and oil fired plants. Investigation of the cells of Drosophila and mammals, 9:9317 (R;SE;In Swedish)
Operation disturbances affecting the emission. Frequency-Duration-Level, 9:9285 (R;SE;In Swedish)
Variations in particulate effluent mutagenicity from a coal fired boiler, 9:9318 (R;SE;In Swedish)

State Univ. of New York, Buffalo (USA)
Plasma magnetic field measurement by intracavity absorption. Progress report, June 1, 1983-May 31, 1984, 9:11186 (R;US)

State Univ. of New York, Buffalo (USA). Dept. of Chemical Engineering
Catalytic coal liquefaction. Quarterly report, October-December 1983, 9:9227 (R;US)

State Univ. of New York, Stony Brook (USA)
Type II successful supernovae, the anatomy of shocks: neutrino emission and the adiabatic index, 9:10974 (R;US)
X-ray holographic microscopy experiments at the Brookhaven synchrotron light source, 9:10628 (R;US)

State Univ. of New York, Stony Brook (USA). Dept. of Physics
Generation of intense coherent soft x-ray with electron microbunches induced and frozen by lasers, 9:9528 (R;US)

State Univ. of New York, Stony Brook (USA). Health Science Center
Status of pulmonary host defense in the neonatal sheep: cellular and humoral aspects, 9:10829 (R;US)

Stazione Zoologica, Naples (Italy)
Quantitative analysis and simulation of Mediterranean coastal ecosystems: the Gulf of Naples, a case study, 9:10725 (R;US)

Steirische Wasserkraft- und Elektrizitaets-A.G. (STEWEAG), Graz (Austria)
STEWEAG business report 1981, 9:9580 (R;AT;In German)

Sterling Systems, Inc., McLean, VA (USA)
Collection, reduction, operation, maintenance and documentation of energy data for the petroleum industry. Final report, 9:9337 (R;US)

Stevens Inst. of Tech., Hoboken, NJ (USA). Dept. of Mechanical Engineering
New theory for the conversion of solar-derived wind energy using oscillating cascades of airfoils. Final technical report, 9:9753 (R;US)

Stichting Energieonderzoek Centrum Nederland, Petten
Final report on the REAL-80 exercise, 9:10576 (R;NL)

Studsvik Energiteknik AB, Nykoeping (Sweden)
Experimental study of defect power reactor fuel. Final report, 9:9777 (R;SE)

Studsvik Science Research Lab., Nykoeping (Sweden)
Progress report 1982, 9:9867 (R;SE)

Stuttgart Univ. (Germany, F.R.)
Comparison of the picture of the intensity of radiation of a flame obtained by a television camera with intensity picture obtained from temperature and concentration measurements, 9:10393 (R;DE;In German)

Svensk Kaernbraenslefoersoerjning AB, Stockholm
Alfven wave excitation in a cavity with a transverse magnetic field, 9:11245 (R;SE)
Diffusion in crystalline rocks of some sorbing and nonsorbing species, 9:9489 (R;SE)
Diffusion of hydrogen, hydrogen sulfide and large molecular weight anions in bentonite, 9:10298 (R;SE)
Experimental studies of equilibrium in a linear EXTRAP z-pinch discharge, 9:11243 (R;SE)
Finite larmor radius stabilization of Z-pinches, 9:11244 (R;SE)
Movement of a redox front downstream from a repository for nuclear waste, 9:10716 (R;SE)
Possible effects of alpha and beta radiolysis on the matrix dissolution of spent nuclear fuel, 9:9491 (R;SE)
Radioactive disequilibria in mineralised drill core samples from the Bjoerklund uranium occurence, northern Sweden, 9:9490 (R;SE)
Radionuclide transport in a single fissure. A laboratory study, 9:10717 (R;SE)
Zero-dimensional EXTRAP computer code, 9:11242 (R;SE)

Sveriges Lantbruksuniversitet, Garpenberg. Institutionen foer Skogsteknik
Fuelwood as a source of energy in private forestry - the situation in 1979 and future potential, 9:9614 (R;SE;In Swedish)
Study on cost of machine use in forestry. Proposing fuel consumption as cost determinant, 9:9613 (R;SE;In Egnlish)

Sveriges Lantbruksuniversitet, Lund. Inst. foer Lantbrukets Byggnadsteknik
Internal solar collectors for greenhouses, 9:9706 (R;SE;In Swedish, English)

Swedish Univ. of Agricultural Sciences, Uppsala. Dept. of Radioecology
Aspects on the use of isotopes in studies of biological dinitrogen fixation by legumes, 9:10792 (R;SE)
Root bioactivity of corn and sunflower as evaluated by ^{75}Se-plant injection technique, 9:10791 (R;SE)

Swedish Water and Air Pollution Research Lab., Goeteborg
Extra high emissions of nitrogen oxides in Gothenburg 1975-1981, 9:10655 (R;SE;In Swedish)

Heat transfer in oscillatory flow. Progress report, January 1983-December 1983, 9:10425 (R;US)
Virginia Univ., Charlottesville (USA). Dept. of Chemistry
Glow discharge as an atomization and ionization device. Progress report, November 1, 1982-November 1, 1983, 9:10312 (R;US)
Virginia Univ., Charlottesville (USA). Dept. of Physics
Spectroscopy of surface adsorbed molecules. Progress report, May 1, 1983-April 30, 1984, 9:10990 (R;US)
Vitro Labs., Silver Spring, MD (USA)
Solar energy system performance evaluation update. Karasek Home, Blackstone, Massachusetts, April 1982-May 1983, 9:9707 (R;US)
Vrije Univ., Amsterdam (Netherlands)
High resolution studies of barium Rydberg states, 9:11004 (R;NL)
Running for life. Studies on the locomotory activity and population dynamics of Pterostichus versicolor Sturm and Calathus melanocephalus L. (Coleoptera, Carabidea), 9:10830 (R;NL)

W

Warren Spring Lab., Stevenage (UK)
Air pollution from oxides of nitrogen, carbon monoxide and hydrocarbons, 9:10663 (R;US)
Assessment of the mackay apparatus for testing oil-spill dispersants, 9:9350 (R;US)
Battery-related wastes in the UK (United Kingdom) and their disposal, 9:10146 (R;US)
Clearance of oil from water surfaces: the oil mop recovery device, 9:9348 (R;US)
Combustion of refuse derived fuel in suspension, 9:10464 (R;US)
Comparison of methods for measuring ambient concentrations of sulphur dioxide, 9:10662 (R;US)
Criteria for the selection of oil spill containment and recovery equipment for use at sea, 9:9353 (R;US)
Determination of in-service vehicle gaseous emissions over a wide range of road operating conditions, 9:10667 (R;US)
Dispersants for oil spills clean-up operations at sea, on coastal waters and beaches, 9:9343 (R;US)
Evaluation trials on equipment manufactured by OMI Ltd., Tonbridge, Kent. the oil mop II-9DP, 9:9352 (R;US)
Fate of controlled oil spills at sea, 9:9349 (R;US)
Further experiments on a model of an escape of heavy gas, 9:10668 (R;US)
High moisture slurry tailings - final report, 9:9992 (R;US)
Hydraulic transport of limestone aggregates and colliery spoil, 9:10405 (R;US)
Investigation of the demulsification of water-in-oil emulsions formed when crude oil or fuel oil is spilt on the sea, 9:9345 (R;US)
Investigation of the effects of oil viscosity and water-in-oil emulsion formation on dispersant efficiency, 9:9354 (R;US)
Measurement of particulate emission using a British Coal Utilization Research Association cyclone probe fitted with a Whatman gf/a microfibre backing filter, 9:9294 (R;US)
National survey of smoke and sulphur dioxide - quality control tests on the analysis of samples, 9:10664 (R;US)

Need for long term lagoons - a literature survey, 9:10147 (R;US)
Numerical diffusivity model and its application to fumigation processes, 9:10666 (R;US)
Observations on the aerial application of dispersant using dc-6b aircraft, Gulf of Campeche, Mexico, 9:9351 (R;US)
Odour control by thermal incineration, 9:10665 (R;US)
Studies on the use of helicopters for oil spill clearance, 9:9344 (R;US)
Wind tunnel model experiments on a buoyant emission from a building, 9:10358 (R;US)

Washington Univ., St. Louis, MO (USA)
Chemistry and visual impact of the plumes from the Four Corners Power Plant and San Manuel Copper smelter. Interim report 4 Apr 79-14 Jan 82, 9:10669 (R;US)

Wesleyan Univ., Middletown, CT (USA)
Formation of H^- by charge transfer in alkaline-earth vapors, 9:11322 (R;US)

Western Kentucky Univ., Bowling Green (USA). Dept. of Chemistry
New catalysts for coal liquid upgrading. Quarterly report, September 1-November 30, 1983, 9:9230 (R;US)

Westinghouse Electric Corp., Pittsburgh, PA (USA). Research and Development Center
Investigation of the dielectric strength of epoxy insulators for compressed gas systems. Final report, 9:10451 (R;US)

Westinghouse Research and Development Center, Pittsburgh, PA (USA)
Diagnostic techniques for measuring temperature transients and stress transients in the first wall of an ICF reactor, 9:11277 (R;US)
Investigation of the dielectric strength of epoxy insulators for compressed gas systems. Interim report, July 1975-June 1977, 9:10450 (R;US)

West Virginia Univ., Morgantown (USA)
Electric vehicle demonstration program. Contract management summary and final techinal report, 9:10189 (R;US)

Wirtschaftsverband Erdoel- und Erdgasgewinnung e.V., Hannover (Germany, F.R.)
Production profits, 9:10032 (R;DE;In German)

Wisconsin Univ., Madison (USA). Dept. of Nuclear Engineering
Gas filled dynamics for laser driven fusion reactors. Final report, August 4, 1981-December 31, 1983, 9:11282 (R;US)

Wisconsin Univ., Madison (USA). Extension
Wisconsin Energy Extension Service pilot project. Final report, October 1977-March 1980, 9:10176 (R;US)

Wisconsin Univ., Madison (USA). Mathematics Research Center
Measures of nonlinearity for segmented regression models. Technical summary report, 9:10057 (R;US)

Wisconsin Univ., Milwaukee (USA). Center for Great Lakes Studies
Chemical behavior of long-lived radionuclides in the marine environment, 9:10749 (R;US)

Witt (Charles K.), Las Cruces, NM (USA)
North-side solar greenhouse. Final report, 9:9702 (R;US)

Wuppertal Univ. (Gesamthochschule) (Germany, F.R.). Fachbereich 14 - Sicherheitstechnik
Accident analysis in the framework of emergency provisions. A study on the current state and further development of the accident analysis methods in the framework of the emergency provisions for nuclear power plants with light water moderated pressurized water reactor, 9:9890 (R;DE;In German)

Y

Yale Univ., New Haven, CT (USA). Gibbs Lab.
Intense positron beams: linacs. Preworkshop copy, 9:9530 (R;US)

Z

Zerna - Schnellenbach, Ingenieursozietaet fuer Konstruktiven Ingenieurbau, Bochum (Germany, F.R.)
Situation of quality assurance for safety related buildings of nuclear power stations. Status report on behalf of the Federal Minister of the Interior. Final report 1982, 9:9892 (R;DE;In German)

PERSONAL AUTHOR INDEX

Authors' surnames are indexed in the form appearing in the abstracted publication; given names are reduced to initials. Each author entry gives the publication title and the citation number. The document type, e.g., R for Report; country of publication, e.g., US; and language of the document, e.g., In German; are given in parentheses at the end of the entry. If no language statement appears, the language is English. Tables of document types and country of publication codes appear after the indexes. For publications with multiple authors, an entry is provided for each author. Entries for the second and succeeding authors give references to the first author.

Because of problems involved in the mechanical preparation of this index, all accent marks are omitted. Changes in spelling introduced as a result of accent omission follow standard conventions.

SUBJECT INDEX

The subject index is based on the use of subject descriptors selected from a controlled thesaurus of terms (DOE/TIC-7000). Subject descriptors and qualifiers (subheadings) are selected and presented in the following format:

SUBJECT DESCRIPTOR
Qualifier
Title, (supplementary information), citation number, (R:US)

The notations in the final parentheses indicate the type of document, e.g., R for Report; the country of publication, e.g., US; and the language if other than English, e.g., In German. Tables of document types and country of publication codes appear after the indexes.

The title may be supplemented with additional words, or a phrase, if it appears additional information would be helpful. In cases for which the title contains little or no information related to the subject entry, it may be replaced entirely by the supplementary information. A qualifier is not always required, and in such cases the title will follow the unqualified subject descriptor.

The descriptors selected for use as subject terms are generally the names of specific materials, things, or processes. To the extent possible, a qualifier is selected to describe the properties of, or processses applied to, the subject term.

Index entries are selected to indicate the important ideas and concepts presented in a document, rather than words that may appear in the text. Within the available thesaurus terms, the most probable or logical place to look for typical information is selected. "See references" are included to guide users from synonymous terms or phrases to the descriptor selected as a subject heading for the concept. (e.g. Pipeline Quality Gas see HIGH BTU GAS). "See also references" are used to indicate where to find references to subject concepts that are narrower, broader, or related to a particular subject heading. To complete an exhaustive search of a given subject, all such headings should be reviewed. Copies of DOE/TIC-7000, the Subject Thesaurus, are available from the National Technical Information Service (NTIS), U. S. Department of Commerce, Springfield, VA 22161.

Superconducting Magnets
A layer-wound, 8.7-Tesla superconducting dipole magnet, 9: 10487 (J;US)
Field quality aspects of CBA superconducting magnets, 9: 10526 (J;US)
Technology Utilization
Current accelerators for research and industry, 9: 10548 (J;US)
Environmental applications of accelerator technology, 9: 10488 (J;US)
Uses
Current accelerators for research and industry, 9: 10548 (J;US)
Determination of elemental composition in geochemical exploration using a 14-MeV neutron generator, 9: 10490 (J;US)
Determination of elemental composition in geochemical exploration using a 14-MeV neutron generator 11. Theoretical aspects, 9: 10491 (J;US)
Vacuum Systems
Criteria for vacuum breakdown in rf cavities, 9: 10522 (J;US)
Waveguides
Higher order mode studies in accelerator waveguides, 9: 10486 (J;US)

ACCIDENTAL IRRADIATION
See RADIATION ACCIDENTS

ACES
See QUARKS

ACETYLENE
Ion-Molecule Collisions
Proton transfer from the formyl and isoformyl positive ions to acetylene, 9: 10364 (J;US)
ACID CARBONATES
Reduction
Photochemical energy storage: studies of inorganic photoassistance agents. Progress report, November 30, 1982-November 29, 1983, 9: 9593 (R;US)
ACID RAIN
Air Pollution Abatement
Acid rain: the need to speak out, 9: 9288 (BA;US)
Biological Effects
Acid rain and damage in forestry, 9: 10928 (R;DE;In German)
Acid rain and tree physiology: an overview of some possible mechanisms of response, 9: 10918 (R;US)
Economic Impact
Acid rain and damage in forestry, 9: 10928 (R;DE;In German)
Environmental Effects
Acid rain research: a review and analysis of methodology, 9: 9280 (R;US)
Effects of lake acidification on bird populations, 9: 10743 (R;SE;In Swedish)
Research Programs
Acid rain research: a review and analysis of methodology, 9: 9280 (R;US)
ACRYLAMIDE
Toxicity
The integration of multiple measures in behavioral toxicology, 9: 10762 (BA;US)
ACRYLIC ACID ESTERS
Radiolysis
Radiolysis of resist polymers. 1. Poly(methyl-alpha-haloacrylates) and copolymers with methylmethacrylate. Technical report (Gamma radiation), 9: 10382 (R;US)
Radiolysis of resist polymers. III. Copolymers of methyl-alpha-chloroacrylate and trihaloethylmethacrylates. Technical report (Electron capture), 9: 10383 (R;US)
ACRYLIC POLYMERS
See POLYACRYLATES
ACTINIDE COMPLEXES
Molecular Weight
Apparatus for the determination of molecular weights of actinide complexes, 9: 10626 (R;IN)
ACTINIDE ISOTOPES
See also URANIUM ISOTOPES
Intestinal Absorption
Can information on the gastrointestinal absorption of actinide elements by neonatal rats, guinea pigs, dogs and swine be extrapolated to man?, 9: 10902 (J;GB)
Retention
Can information on the gastrointestinal absorption of actinide elements by neonatal rats, guinea pigs, dogs and swine be extrapolated to man?, 9: 10902 (J;GB)

Retention Functions
Measurement techniques for radium and the actinides in man at the Center for Human Radiobiology, 9: 10901 (J;GB)
Tissue Distribution
Measurement techniques for radium and the actinides in man at the Center for Human Radiobiology, 9: 10901 (J;GB)
ACTIVATION ANALYSIS
Accelerators
An in-situ neutron activation analysis system for assaying metal ores, 9: 10624 (J;US)
Gamma Spectrometers
An in-situ neutron activation analysis system for assaying metal ores, 9: 10624 (J;US)
Ge Semiconductor Detectors
An in-situ neutron activation analysis system for assaying metal ores, 9: 10624 (J;US)
Multi-Channel Analyzers
An in-situ neutron activation analysis system for assaying metal ores, 9: 10624 (J;US)
Neutron Sources
An in-situ neutron activation analysis system for assaying metal ores, 9: 10624 (J;US)
Uses
Potential for the application of nuclear techniques in selected developing countries in Africa, 9: 10960 (R;GB)
ACTIVITY TRANSPORT
See RADIOACTIVITY TRANSPORT
ADENOCARCINOMAS
See CARCINOMAS
ADENOSINE TRIPHOSPHATASE
See ATP-ASE
ADIABATIC PROCESSES
Absorption
Adiabatic absorption and desorption for improvement of temperature-boosting absorption heat pumps, 9: 10117 (J;US)
Desorption
Adiabatic absorption and desorption for improvement of temperature-boosting absorption heat pumps, 9: 10117 (J;US)
ADRENAL GLANDS
Biological Radiation Effects
Catecholamine level and monoamino oxidase activity following irradiation, 9: 10879 (RA;CS;In Slovak)
ADVANCED TEST IDAHO REACTOR
See ATR REACTOR
AEROSOLS
See also RADIOACTIVE AEROSOLS
SMOKES
Multi-Element Analysis
Non-destructive multielement analysis of airborne particulates by means of instrumental neutron activation method. Final report for the period 1 December 1975 - 28 February 1981, 9: 10314 (R;XA)
Sampling
EDS coal liquefaction process development. Phase V. ECLP industrial hygiene program - II, 9: 9221 (R;US)
AFLATOXIN
Biological Effects
Comparative mutagenesis of human cells in vitro and in vivo. Progress report and financial statement, 9: 10768 (R;US)
DNA Adducts
Comparative mutagenesis of human cells in vitro and in vivo. Progress report and financial statement, 9: 10768 (R;US)
AFTER-HEAT REMOVAL
Natural Convection
Transient testing of the FFTF for decay heat removal by natural convection, 9: 9932 (BA;FR)
Test Facilities
Pretest predictions for degraded shutdown heat-removal tests in THORS-SHRS Assembly 1 (LMFBR), 9: 9882 (R;US)
AGED
See ELDERLY PEOPLE
AGRICULTURE
See also DAIRY INDUSTRY
Water Rights
Water transfers from agriculture to industry, 9: 9997 (R;US)

AIR
See also SURFACE AIR
Distribution
Use of the pot furnace for the prediction of stoker performance, 9: 9312 (BA;US)
Radiation Monitoring
Determination of very small activities of radioiodine and plutonium in air, 9: 10687 (RA;AT;In German)
Radionuclide Migration
Radiological assessment. A textbook on environmental dose analysis, 9: 10691 (R;US)
AIR CONDITIONERS
Performance Testing
Trends of residential air-conditioning cyclic tests, 9: 10122 (J;US)
AIR CUSHION VEHICLES
Corrosion Protection
Development of improved lacv-30 propeller blade coatings for protection against sand and rain erosion and marine environment corrosion. Final report 4 Jan 1982-4 Mar 1983, 9: 10204 (R;US)
Propulsion
Development of improved lacv-30 propeller blade coatings for protection against sand and rain erosion and marine environment corrosion. Final report 4 Jan 1982-4 Mar 1983, 9: 10204 (R;US)
AIR FILTERS
Performance
Nuclear air cleaning: the need for a change in emphasis, 9: 10681 (RA;US)
Performance Testing
Los Alamos National Laboratory/New Mexico State University filter plugging test facility: description and preliminary test results, 9: 10472 (R;US)
Measurement of particulate emission using a British Coal Utilization Research Association cyclone probe fitted with a Whatman gf/a microfibre backing filter, 9: 9294 (R;US)
Research Programs
Electric air filtration: theory, laboratory studies, hardware development, and field evaluations, 9: 10473 (R;US)
Technology Assessment
Nuclear air cleaning: the need for a change in emphasis, 9: 10681 (RA;US)
Test Facilities
Los Alamos National Laboratory/New Mexico State University filter plugging test facility: description and preliminary test results, 9: 10472 (R;US)
AIR INFILTRATION
Tracer Techniques
Air infiltration measurements in a home using a convenient perfluorocarbon tracer technique, 9: 10675 (J;GB)
AIR POLLUTION
See also INDOOR AIR POLLUTION
Biological Effects
Acid rain and tree physiology: an overview of some possible mechanisms of response, 9: 10918 (R;US)
Biological Indicators
Pine needles as sensors of atmospheric pollution, 9: 10676 (J;NL)
Environmental Impacts
FORAST: a regional scale study of forest responses to air pollutants, 9: 10653 (R;US)
Environmental Transport
Regional air quality in the Four Corners Study Region: modeling approach, 9: 10674 (BA;US)
Mathematical Models
Numerical treatment of the advection-diffusion equation. Part 2. Test problems, 9: 10644 (R;DK)
Numerical treatment of the advection-diffusion equation. Part 3. Time integration, 9: 10645 (R;DK)
Numerical treatment of the advection-diffusion equation. Part 4. Multilevel model, 9: 10646 (R;DK)
Numerical treatment of the advection-diffusion equation. Pt. 6. Special treatment of the diffusion terms, 9: 10648 (R;DK)
Numerical treatment of the advection-diffusion equation. Part 5. Documentation of ADMO1, 9: 10647 (R;DK)
Monitoring
Emissions from coal combustion and fuel oil combustion, 9: 9266 (R;SE;In Swedish)
Pine needles as sensors of atmospheric pollution, 9: 10676 (J;NL)
Risk Assessment
Assessment of health and environmental effects of energy sources. Final report, 9: 10640 (R;US)
AIR POLLUTION ABATEMENT
Use this term for items that involve the prevention of formation of pollutants at the source.
Cost Benefit Analysis
Benefits analysis of alternative secondary national ambient air quality standards for sulfur dioxide and total suspended particulates. Volume 4. Final report, 9: 10699 (R;US)
Benefits analysis of alternative secondary national ambient air quality standards for sulfur dioxide and total suspended particulates. Volume 5. Final report, 9: 10700 (R;US)
Benefits analysis of alternative secondary national ambient air quality standards for sulfur dioxide and total suspended particulates. Volume 6. Final report, 9: 10701 (R;US)
Standards
Benefits analysis of alternative secondary national ambient air quality standards for sulfur dioxide and total suspended particulates. Volume 1. Final report, 9: 10697 (R;US)
Benefits analysis of alternative secondary national ambient air quality standards for sulfur dioxide and total suspended particulates. Volume 2. Final report, 9: 10698 (R;US)
AIR POLLUTION CONTROL
Use this term for items that involve the removal or management of pollutants after they are formed by a source.
Cost
Costs and effects of environmental protection controls regulating US phosphate rock mining. Information circular, 9: 9991 (R;US)
Federal Republic of Germany
Clean air program for the Rhine-Main area, 9: 10696 (R;DE;In German)
Mathematical Models
Numerical treatment of the advection-diffusion equation. Part 1. Space discretization, 9: 10643 (R;DK)
AIR POLLUTION MONITORS
UV lidar techniques for atmospheric NO monitoring, 9: 10658 (R;SE)
Comparative Evaluations
Comparison of methods for measuring ambient concentrations of sulphur dioxide, 9: 10662 (R;US)
Performance Testing
Zero/span control of monitors used in the Danish national airquality measurement program, 9: 10659 (R;DK;In Danish)
Quality Control
Guidelines for monitoring indoor air quality. Research report, 9: 10670 (R;US)
AIR QUALITY
Biological Indicators
A search for the identity of genotoxic agents in the ambient air using the Tradescantia bioassay, 9: 10649 (BA;US)
Monitoring
Environmental program at the MHD Coal Fired Flow Facility, 9: 10652 (RA;US)
AIR SAMPLERS
Design
Determination of very small activities of radioiodine and plutonium in air, 9: 10687 (RA;AT;In German)
AIR SOURCE HEAT PUMPS
Comparative Evaluations
Comparison of field performance to steady state performance for two dealer-installed air-to-air heat pumps, 9: 10116 (J;US)
Efficiency
Fluidized bed air-to-air heat pump evaporator evaluation. Final report Oct 1982-Sep 19823 , 9: 10058 (R;US)
Evaporators
Fluidized bed air-to-air heat pump evaporator evaluation. Final report Oct 1982-Sep 19823 , 9: 10058 (R;US)

Frost
Fluidized bed air-to-air heat pump evaporator evaluation. Final report Oct 1982-Sep 19823 , 9: 10058 (R;US)
Performance Testing
Comparison of field performance to steady state performance for two dealer-installed air-to-air heat pumps, 9: 10116 (J;US)

Bioassay model for estimating body burdens of ^{241}Am from excretion analyses, 9: 10905 (J;GB)
Electrochemistry
Chemical behavior of long-lived radionuclides in the marine environment, 9: 10749 (R;US)
Radiobiology
Dosimetry of incorporated transuranic radionuclides, 9: 10890 (R;DD;In German)
Radioecological Concentration
Alpha-activities in environmental samples, 9: 10710 (RA;AT;In German)
Chemical behavior of long-lived radionuclides in the marine environment, 9: 10749 (R;US)
Radiometric Analysis
Nondestructive photon analysis of ^{241}Am in soils and sediment utilizing self-absorption corrections, 9: 10340 (J;CH)
Tissue Distribution
A tissue distribution model for assessment of human inhalation exposures to $^{241}AmO_2$, 9: 10904 (J;GB)
AMERICIUM 242
Radiobiology
Dosimetry of incorporated transuranic radionuclides, 9: 10890 (R;DD;In German)
AMERICIUM 243
Radiobiology
Dosimetry of incorporated transuranic radionuclides, 9: 10890 (R;DD;In German)
AMERICIUM 244
Radiobiology
Dosimetry of incorporated transuranic radionuclides, 9: 10890 (R;DD;In German)
AMERICIUM OXIDES
Tissue Distribution
A tissue distribution model for assessment of human inhalation exposures to $^{241}AmO_2$, 9: 10904 (J;GB)
AMINES
See also ANILINE
CATECHOLAMINES
CYSTAMINE
GUANINE
MUCOPOLYSACCHARIDES
NITROSAMINES
QUATERNARY COMPOUNDS
Dealkylation
Dealkylation of N,N-dimethylaniline with sulphur and hydrogen sulphide, 9: 10361 (J;GB)
AMINO ACIDS
Organic acids containing both a basic amino group and an acidic carboxyl group.
See also ASPARTIC ACID
GLUTAMIC ACID
HYDROXYPROLINE
SERINE
Radionuclide Kinetics
The distribution of tritium among the amino acids of proteins obtained from mice exposed to tritiated water, 9: 10892 (J;US)
AMINO ALCOHOLS

AMMONIA
Biological Effects
Systematic studies of the effect of aggressive gases on sprucewood, 9: 10930 (R;DE;In German)
Environmental Transport
Atmospheric dispersion of ammonia: an ammonia fog model, 9: 10672 (J;US)
Production
Production of medical radionuclides with a 24 MeV proton cyclotron, 9: 10809 (J;US)
Synthesis
Molecular surface science of heterogeneous catalysis. History and perspective, 9: 10240 (R;US)
AMMONIUM NITRATES
Energy Consumption
Comparison of energy requirements for production of high-nitrogen mixed fertilizer by the nitrophosphate route with the urea-ammonium phosphate route, 9: 10150 (R;US)
Production
Comparison of energy requirements for production of high-nitrogen mixed fertilizer by the nitrophosphate route with the urea-ammonium phosphate route, 9: 10150 (R;US)
AMNION CELLS
See EMBRYONIC CELLS
ANAEROBIC DIGESTION
See also BIOGAS PROCESS
Technology Assessment
Anaerobic technology - hazardous wastes, 9: 9987 (R;US)
ANALOG-TO-DIGITAL CONVERTERS
Signal Distortion
Analytical examination of distortions in power spectra due to sampling errors, 9: 11378 (R;XA)
Time Resolution
Four of time-to-digital converters with a broad dynamic range, 9: 10452 (R;SU;In Russian)
ANALYSIS (ACTIVATION)
See ACTIVATION ANALYSIS
ANALYSIS (QUANTITATIVE CHEMICAL)
See QUANTITATIVE CHEMICAL ANALYSIS
ANALYTIC FUNCTIONS
Extension of Hsup(p) functions in polydiscs, 9: 11377 (R;XA)
ANGIOGRAPHY
See BIOMEDICAL RADIOGRAPHY
ANHARMONIC OSCILLATORS
Feynman Diagram
Diagram summation method by means of legendre transformation by a scalar parameter and its application to an anharmonic oscillator, 9: 11164 (R;SU)
Ground States
Diagram summation method by means of legendre transformation by a scalar parameter and its application to an anharmonic oscillator, 9: 11164 (R;SU)
ANILINE
Chemical Reaction Yield
Dealkylation of N,N-dimethylaniline with sulphur and hydrogen sulphide, 9: 10361 (J;GB)
ANIMALS
Radionuclide Migration
Radionuclide transport processes in terrestrial ecosystems, 9: 10720 (J;US)
ANIONS
See also HYDROGEN IONS 1 MINUS
Colliding Beams
Laser spectroscopy of negative ion beams, 9: 11019 (J;US)
Diffusion
Diffusion of hydrogen, hydrogen sulfide and large molecular weight anions in bentonite, 9: 10298 (R;SE)
Laser Spectroscopy
Laser spectroscopy of negative ion beams, 9: 11019 (J;US)
ANISOLE
Biological Effects
Role of toxicological interactions in chemical carcinogenesis, 9: 10919 (R;US)
ANKERITE
Decomposition
Mineral reactions during high temperature oil shale processing, 9: 9418 (J;US)
ANODES
Fabrication
Silicon electrorefining using a semipermeable Cu_3Si:Si anode, 9: 9634 (J;US)
Permeability
Silicon electrorefining using a semipermeable Cu_3Si:Si anode, 9: 9634 (J;US)
ANTENNAS
Mathematical Models
Modeling antennas near to and penetrating a lossy interface, 9: 10457 (R;US)
Power Losses
Modeling antennas near to and penetrating a lossy interface, 9: 10457 (R;US)
ANTHRAQUINONES
Photochemical Reactions
Photochemical reactions of complex molecules in condensed phase. Progress report, March 1, 1983-February 28, 1984, 9: 10377 (R;US)
Photochemistry
Photochemistry of 9,10-anthraquinone-2-sulfonate in solution. Part II. Effects of inorganic anions; quenching vs. radical formation at moderate and high anion concentrations, 9: 10378 (R;US)
ANTIBIOTICS
Biological Effects
Role of DNA polymerase α in chromosomal aberration production by ionizing radiation, 9: 10783 (R;US)
Response Modifying Factors
Effect of antibiotics on progress of bacteremia in irradiated animals, 9: 10868 (RA;CS;In Czech)
ANTIBODY FORMATION
Biological Radiation Effects
Long-term inhibition of immunological reactivity of X-irradiated mice and its possible stimulation by thymus shielding during irradiation, 9: 10867 (RA;CS;In Czech)
ANTIMONY
Activation Analysis
Application of INAA in monitoring environmental pollution by car exhaust gas, 9: 10319 (RA;CS;In Czech)
Trace element analysis of biological materials: Complementarity of PIXE and NAA, 9: 10342 (J;US)
Inner-Shell Ionization
K-shell ionization by low-velocity ions, 9: 11024 (J;US)
Ion-Atom Collisions
K-shell ionization by low-velocity ions, 9: 11024 (J;US)
PIXE Analysis
Trace element analysis of biological materials: Complementarity of PIXE and NAA, 9: 10342 (J;US)
ANTIMONY ALLOYS
Crystal Growth
Theoretical and experimental study of solid phase miscibility gaps in III/V quaternary alloys. Progress report ($GaAs_{0.8}Sb_{0.2}$), 9: 10292 (R;US)
ANTIMONY CHLORIDES
Catalytic Effects
Molten salt catalysis. Selective bond cleavage reactions for some α,ω-diphenylalkanes in $SbCl_3$ melts, 9: 10368 (J;US)
ANTIMUONS
See MUONS PLUS
ANTRIM SHALES
See BLACK SHALES

APARTMENT BUILDINGS
Energy Conservation
Model industry initiated energy conservation program. Final report, 9: 10174 (R;US)
Energy Consumption
Testimony before the Senate Human Resources Committee concerning individual metering of apartment houses, 9: 10071 (R;US)
Master Metering
Testimony before the Senate Human Resources Committee concerning individual metering of apartment houses, 9: 10071 (R;US)
Metering
Testimony before the Senate Human Resources Committee concerning individual metering of apartment houses, 9: 10071 (R;US)
APPALACHIA
The mountainous region, including valleys and plateaus extending through the eastern USA from New England to Georgia and Alabama.
Evaluation
Evaluation of stimulation treatments in Appalachian tight gas sands, 9: 9376 (J;US)
Natural Gas Deposits
Evaluation of stimulation treatments in Appalachian tight gas sands, 9: 9376 (J;US)
Sandstones
Evaluation of stimulation treatments in Appalachian tight gas sands, 9: 9376 (J;US)
APPARATUS
See EQUIPMENT
AQUATIC ECOSYSTEMS
Mathematical Models
Quantitative analysis and simulation of Mediterranean coastal ecosystems: the Gulf of Naples, a case study, 9: 10725 (R;US)
Radionuclide Migration
Chemical behavior of long-lived radionuclides in the marine environment, 9: 10749 (R;US)
AQUIFERS
Compressed Air Energy Storage
Initial operation of the compressed air experiment at Pittsfield, Illinois, 9: 9944 (J;US)
Thermophysical behavior of St. Peter sandstone: application to compressed air energy storage in an aquifer, 9: 9943 (R;US)
Contamination
Entrainment of viruses from septic tank leach fields through a shallow, sandy soil aquifer, 9: 10746 (J;US)
Heat Storage
Aquifer seasonal energy storage: results and simulations of moderate temperature field experiments, 9: 9950 (J;US)
ARCTIC REGIONS
Clouds
Variation of arctic cloud cover in summer: results through February 1983, 9: 10641 (R;US)
ARGON
Atom-Molecule Collisions
Influence of collisions with noble gases on spectral lines of hydrogen isotopes, 9: 11006 (R;NL)
Auger Effect
Relative population of the levels of the $1s2s2p$ and $1s2p^3$ configurations of argon from three electron excited atoms, 9: 11038 (J;US)
Energy Levels
Relative population of the levels of the $1s2s2p$ and $1s2p^3$ configurations of argon from three electron excited atoms, 9: 11038 (J;US)
Inner-Shell Ionization
L-shell ionization in proton and alpha particle collisions with argon, 9: 11037 (J;US)
Ion-Atom Collisions
Comparison of L x-ray spectra from multi-stripped ions in P^+ + Ar and S^+ + Ar gas collisions at 100 keV, 9: 11026 (J;US)
Dielectronic and radiative recombination of highly stripped sulfur ions incident on argon, 9: 11035 (J;US)
Interference effect in the impact parameter dependence of K-K charge transfer in slow S-Ar collisions, 9: 10994 (RA;DE;In German)
Interference effects in the quasimolecular K-radiation induced in collisions of hydrogenlike ions, 9: 10996 (RA;DE;In German)
L-shell ionization in proton and alpha particle collisions with argon, 9: 11037 (J;US)
Two accel/decel experiments: electron capture for 6 to 20 MeV S^{10-16+} on He and Ar and interference effects in MO K x-ray spectra for 5, 10, and 20 MeV Cl^{16+} on Ar, 9: 10989 (R;US)
Viscosity
Diffusion of gases in porous solids: simulations and measurements. Fifth quarterly technical proogress report, July 16, 1983-October 15, 1983, 9: 10427 (R;US)
X-Ray Spectra
Comparison of L x-ray spectra from multi-stripped ions in P^+ + Ar and S^+ + Ar gas collisions at 100 keV, 9: 11026 (J;US)
ARGON 40 REACTIONS
Compound-Nucleus Reactions
Shell effects at high angular momentum, 9: 11131 (J;US)
Fragmentation
Observation of anomalously short mean free paths of projectile fragments of 1.85A-GeV ^{40}Ar in CR-39 etched track detector, 9: 11121 (J;US)
ARGON METHOD
See ISOTOPE DATING
ARIZONA
Air Pollution
Regional air quality in the Four Corners Study Region: modeling approach, 9: 10674 (BA;US)
ARMS
Biomedical Radiography
Angiography of the upper extremity, 9: 10801 (R;NL)
AROMATIC ACIDS
See CARBOXYLIC ACIDS
AROMATIC COMPOUNDS

AROMATICS
See also ANILINE
BENZENE
DDT
PHENOLS
POLYCYCLIC AROMATIC HYDROCARBONS
QUINONES
STYRENE
TOLUENE
Dealkylation
Dealkylation of N,N-dimethylaniline with sulphur and hydrogen sulphide, 9: 10361 (J;GB)
Raman Spectra
Molecular complexes of copper uroporphyrin with aromatic acceptors, 9: 10369 (J;US)
ARRAY PROCESSORS
Parallel Processing
Multiplication of processing capacity with a parallel processor array, 9: 11384 (R;US)
ARSENATES
Specific compounds should be indexed by coordination of a descriptor of the form (CATION) COMPOUNDS and the above anion descriptor.
Biological Effects
Effects of metal compounds on chromosome length, 9: 10924 (R;SE)
ARSENIC
Activation Analysis
Application of INAA in monitoring environmental pollution by car exhaust gas, 9: 10319 (RA;CS;In Czech)
Trace element analysis of biological materials: Complementarity of PIXE and NAA, 9: 10342 (J;US)
PIXE Analysis
Trace element analysis of biological materials: Complementarity of PIXE and NAA, 9: 10342 (J;US)

ARSENIC FLUORIDES
Magnetic Properties
Magnetic response of spin-density waves in a quasilinear half-filled Hubbard band, 9: 10304 (J;US)
Spin Waves
Magnetic response of spin-density waves in a quasilinear half-filled Hubbard band, 9: 10304 (J;US)
ARTIFICIAL INTELLIGENCE
Computer Codes
NIL notes for release 0.259 (New Implementation of LISP), 9: 11372 (R;US)
ASBESTOS
Ecological Concentration
Guidelines for monitoring indoor air quality. Research report, 9: 10670 (R;US)
ASDEX TOKAMAK
Research Programs
IPP: Annual report 1982, 9: 11348 (B;DE;In German)
ASHES
See also FLY ASH
Activation Analysis
Laboratory and field acceptance performance of CONAC, 9: 9264 (R;US)
Distribution
Use of the pot furnace for the prediction of stoker performance, 9: 9312 (BA;US)
Particle Size
Evaluation of the effect of coal cleaning on fugitive elements. Phase IV. Identification of mineral forms in coal. Quarterly progress report No. 2, September 1-November 30, 1983, 9: 9297 (R;US)
Sorptive Properties
Thermodynamic behavior of coal liquids in the presence of coal solids characterization of IOM and ash. First quarterly progress report, August 1-November 1, 1983, 9: 9234 (R;US)
ASPARAGIC ACID
See ASPARTIC ACID
ASPARAGINIC ACID
See ASPARTIC ACID
ASPARTIC ACID
Membrane Transport
Characterization and isolation of a light driven sodium pump from membranes of Halobacterium halobium. Final technical progress report, 9: 10767 (R;US)
ASTATINE 209
Chemical Preparation
Some aspects of the organic, biological and inorganic chemistry of astatine, 9: 10387 (R;NL)
Chemical Properties
Some aspects of the organic, biological and inorganic chemistry of astatine, 9: 10387 (R;NL)
ASTATINE 210
Chemical Preparation
Some aspects of the organic, biological and inorganic chemistry of astatine, 9: 10387 (R;NL)
Chemical Properties
Some aspects of the organic, biological and inorganic chemistry of astatine, 9: 10387 (R;NL)
ASTATINE 211
Chemical Preparation
Some aspects of the organic, biological and inorganic chemistry of astatine, 9: 10387 (R;NL)
Chemical Properties
Some aspects of the organic, biological and inorganic chemistry of astatine, 9: 10387 (R;NL)
ATF TORSATRON
Magnet Coils
Design description of the helical field coils for the Advanced Toroidal Facility, 9: 11276 (R;US)
Magnetic Field Configurations
Computer simulation of magnetic field circuits in ATF, 9: 11269 (R;US)
Transport Theory
Monte Carlo methods for optimizing torsatron configurations, 9: 11184 (R;US)
ATLANTIC OCEAN
See also NEW YORK BIGHT
SOUTH ATLANTIC BIGHT
Sediments
Consolidation properties and stress history of some deep sea sediments, 9: 10970 (R;US)
Water Pollution
Transport and transfer rates in the waters of the Continental Shelf. Annual report, June 1, 1981-April 30, 1984, 9: 10738 (R;US)
ATMOSPHERES
Not for EARTH ATMOSPHERE.
Kinetics
Assessment of health and environmental effects of energy sources. Final report, 9: 10640 (R;US)
ATOM COLLISIONS
See also ATOM-MOLECULE COLLISIONS
ELECTRON-ATOM COLLISIONS
ION-ATOM COLLISIONS
PHOTON-ATOM COLLISIONS
Penning Effect
Exciton kinetics in condensed rare gases, 9: 11011 (J;US)

ATOM-MOLECULE COLLISIONS
Vibrational States
Non vertical vibronic transitions in atom molecule collisions, 9: 11003 (R;NL)
ATOMS
Ion Collisions
Ionization by low and intermediate energy ion and neutral beams, 9: 11029 (J;US)
Ionization
Ionization by low and intermediate energy ion and neutral beams, 9: 11029 (J;US)
ATP-ASE
Code numbers 3.6.1.3 and 3.6.1.8.
Biochemical Reaction Kinetics
Regulation by turnover of Na,K-ATPase in HeLa cells, 9: 10779 (BA;US)
ATR REACTOR
Fuel Plates
Aqueous corrosion of uranium aluminide fuel, 9: 9851 (J;US)
ATTACHED GREENHOUSES
Cost
Specification/cost data base: residential retrofit, 9: 9705 (R;US)
Design
North-side solar greenhouse. Final report, 9: 9702 (R;US)
Performance
North-side solar greenhouse. Final report, 9: 9702 (R;US)
Specifications
Specification/cost data base: residential retrofit, 9: 9705 (R;US)
AUDITORY ORGANS
Protective Clothing
Noise attenuating properties of earmuffs worn by miners. Volume 1. Comparison of earmuff attenuation as measured by psychophysical and physical methods. Open file report (final) Jan-Oct 1979, 9: 10702 (R;US)
Noise attenuating properties of earmuffs worn by miners. Volume 2. Development of a laboratory procedure for the physical measurement of earmuff attenuation. Open file report 1 Jul 1979-30 Jun 1980, 9: 10952 (R;US)
AURORAL ZONES
Electric Fields
Ion and electron injection in ionosphere and magnetosphere. Application to the parallel electric field measurement in auroral zones, 9: 10983 (R;FR;In French)
AUSTENITIC STEELS
Prior to February, 1978 STEELS and AUSTENITE were used to index this concept.
Carburization
Measurement of the activity coefficient of carbon in steels in liquid sodium, 9: 10225 (R;FR;In French)

Ductility
High temperature ductility of austenitic alloys exposed to thermal neutrons, 9: 10244 (RA;US)
Irradiation
High temperature ductility of austenitic alloys exposed to thermal neutrons, 9: 10244 (RA;US)
Ultrasonic Testing
Increased probability of failure detection by improving the signal-noise ratio during ultrasonic testing. Pt. 2. Austenitic welded joint and austenitic cast iron, 9: 10439 (R;DE;In German)
AUSTRALIAN ATOMIC ENERGY COMMISSION
See AAEC
AUSTRIA
Biomass Plantations
Biogasohol, 9: 9550 (R;AT;In German)
Ethanol Plants
Biosprit - avoiding faulty planning, 9: 9554 (RA;AT;In German)
Decentralized biogasohol model of the agricultural ethanol distilleries, 9: 9555 (RA;AT;In German)
Hydroelectric Power
STEWEAG business report 1981, 9: 9580 (R;AT;In German)
Land Use
Biogasohol - a necessity of national economy, 9: 9556 (RA;AT;In German)
Land use survey for Austria - basic instrument to determine and to safeguard natural and economic resources in terms of land, especially with regard to energy recovery from biomass. 1st project stage, 9: 9996 (R;AT;In German)
AUTOMOBILE EFFICIENCY STANDARDS
See AUTOMOBILES
AUTOMOBILES
Cost
Energy related innovation: the missing link. A revision and integration of the business cycle theories of Keynes and Schumpeter, 9: 9976 (R;US)
Diesel Engines
New perspectives for advanced automobile diesel engines, 9: 10179 (J;US)
Exhaust Gases
Study of emissions from light-duty vehicles in Denver. Final report, 9: 10195 (R;US)
Fuel Cells
Fuel cell propulsion systems for small transportation vehicles, 9: 10051 (J;US)
Fuel Consumption
Minicars research safety vehicle program. Phase 3. Volume 1. Technical final report. Report for Jan 1977-Sep 1981, 9: 10193 (R;US)
Minicars research safety vehicle program. Phase 3. Volume 2. Appendices. Final report Jan 1977-Sep 1981, 9: 10194 (R;US)
Fuel Economy
Identification of optimized techniques for operating motor vehicles. Final report, September 1980-September 1981, 9: 10128 (R;US)
Identification of optimized techniques for operating motor vehicles. Executive summary, 9: 10129 (R;US)
Study of emissions from light-duty vehicles in Denver. Final report, 9: 10195 (R;US)
Fuel Substitution
Assessment of institutional barriers to the use of natural gas in automotive vehicle fleets, 9: 10130 (R;US)
Operation
Identification of optimized techniques for operating motor vehicles. Executive summary, 9: 10129 (R;US)
Propulsion Systems
Fuel cell propulsion systems for small transportation vehicles, 9: 10051 (J;US)
Safety Engineering
Minicars research safety vehicle program. Phase 3. Volume 1. Technical final report. Report for Jan 1977-Sep 1981, 9: 10193 (R;US)

B

B-1235 RESONANCES
Weak Particle Decay
Charm and beauty lifetime measurements with the MARK II vertex detector, 9: 11060 (R;US)
BACILLUS SUBTILIS
DNA-Cloning
Inducible error-prone repair in B. subtilis. Progress report, May 1, 1983-April 30, 1984, 9: 10844 (R;US)
Mutants
Inducible error-prone repair in B. subtilis. Progress report, May 1, 1983-April 30, 1984, 9: 10844 (R;US)
BACTERIOPHAGES
Chemical Bonds
Interaction of a DNA-binding protein, the gene product of D5 of bacteriophage T5, with double-stranded DNA, 9: 10774 (J;US)
Survival Curves
Effect of dark repair inhibitors on survival of phage SPP1 Bacillus subtilis following UV irradiation, 9: 10860 (RA;CS;In Czech)
BAECKLUND TRANSFORMATION
Formula relating infinitesimal Backlund transformations to hierarchy generating operators, 9: 11380 (R;XA)
BALLOONING INSTABILITY
Stability of n = 1 internal modes in tokamaks, 9: 11234 (R;US)
Stabilization
Ballooning mode stability of bean-shaped cross sections for high-β tokamak plasmas, 9: 11254 (J;US)
Energetic particle stabilization of ballooning modes in tokamaks, 9: 11255 (J;US)
BANKS
See COMMERCIAL BUILDINGS
BARIUM
Emission Spectroscopy
Inductively coupled plasma-atomic emission spectrometry (ICP-AES) in support of nuclear waste management, 9: 10311 (R;US)
Inner-Shell Ionization
L-shell ionization cross sections of Ba, Ce, Nd, Sm and Dy for proton energies from 0.5 to 2.0 MeV, 9: 11025 (J;US)
Ion-Atom Collisions
L-shell ionization cross sections of Ba, Ce, Nd, Sm and Dy for proton energies from 0.5 to 2.0 MeV, 9: 11025 (J;US)
Rydberg States
High resolution studies of barium Rydberg states, 9: 11004 (R;NL)
BARIUM 142
Beta-Minus Decay
Decay of ^{142}Ba to levels of odd-odd ^{142}La, 9: 11133 (J;US)
BARTLESVILLE ENERGY TECHNOLOGY CENTER
Research Programs
Liquid fossil fuel technology. Quarterly technical progress rport, April-June 1983, 9: 9324 (R;US)
BARYON NUMBER 2 RESONANCES

BEETLES
Tracer Techniques
Running for life. Studies on the locomotory activity and population dynamics of Pterostichus versicolor Sturm and Calathus melanocephalus L. (Coleoptera, Carabidea), 9: 10830 (R;NL)

BEHAVIOR
Limited to living systems.
Evaluation
Specifying the nonspecific (Toxicological studies on behavior), 9: 10761 (BA;US)

BELGIUM
Coal Deposits
Aims and present state of the Belgo-German in situ gasification project, 9: 9255 (BA;US)
In-Situ Gasification
Aims and present state of the Belgo-German in situ gasification project, 9: 9255 (BA;US)

BELT CONVEYORS
Capacity
Model formulations for the mathematical-statistical evaluation of operation data as a planning assistance in the assessment of face operations in the bituminous coal mining, 9: 9293 (R;DE;In German)

BENFIELD PROCESS
Coal-gas cleanup facility, 9: 9239 (J;US)

BENTONITE
Comparative Evaluations
Evaluation of phyllosilicates as a buffer component in the disposal of nuclear fuel waste, 9: 9456 (R;CA)
Heat Flow
Thermodynamic coupling of heat and matter flows in near-field regions of nuclear waste repositories, 9: 9482 (R;US)
Mass Transfer
Thermodynamic coupling of heat and matter flows in near-field regions of nuclear waste repositories, 9: 9482 (R;US)
Porosity
Evaluation of phyllosilicates as a buffer component in the disposal of nuclear fuel waste, 9: 9456 (R;CA)
Sorptive Properties
Diffusion of hydrogen, hydrogen sulfide and large molecular weight anions in bentonite, 9: 10298 (R;SE)
Swelling
Evaluation of phyllosilicates as a buffer component in the disposal of nuclear fuel waste, 9: 9456 (R;CA)
Thermal Conductivity
Evaluation of phyllosilicates as a buffer component in the disposal of nuclear fuel waste, 9: 9456 (R;CA)

BENZALDEHYDE
Chemical Reaction Kinetics
Coal liquefaction model studies: free radical chain decomposition of diphenylpropane, dibenzyl ether, and phenyl ether via β-scission reactions, 9: 9259 (J;US)

BENZENE
Fuel Substitution
Theoretical limits of engine economy with alternative automotive fuels, 9: 9559 (J;GB)

BENZOIC ALDEHYDE
See BENZALDEHYDE

BENZOPHENONE
Photochemical Reactions
Photochemical reactions of complex molecules in condensed phase. Progress report, March 1, 1983-February 28, 1984, 9: 10377 (R;US)

BENZOPYRENE
Biological Effects
Role of toxicological interactions in chemical carcinogenesis, 9: 10919 (R;US)

BERYLLIA
See BERYLLIUM OXIDES

BERYLLIUM 10
Mass Spectroscopy
Improvement in an accelerator based mass spectrometer for measuring ^{10}Be, 9: 10552 (J;US)

BERYLLIUM 8
Radiation Detection
Calculation of detection efficiency for beryllium-8, 9: 10620 (J;US)
Radiation Detectors
Calculation of detection efficiency for beryllium-8, 9: 10620 (J;US)

BERYLLIUM 9 REACTIONS
Fission
Fission of polonium, osmium, and erbium composite systems, 9: 11136 (J;US)

BERYLLIUM OXIDES
Electrical Properties
Radiation-induced RF loss measurements and thermal stress calculations for ceramic windows, 9: 10267 (RA;US)
Thermal Stresses
Radiation-induced RF loss measurements and thermal stress calculations for ceramic windows, 9: 10267 (RA;US)

BETA BACKSCATTERING GAGES
See RADIOMETRIC GAGES

BETA BEAMS (ELECTRONS)
See ELECTRON BEAMS

BETA DETECTION
Si Semiconductor Detectors
Specifications of silicon semiconductor detectors for isotopic composition study, 9: 10596 (RA;SU;In Russian)

BGC-LURGI SLAGGING PROCESS
Pilot Plants
British Gas HICOM methanation process for SNG production, 9: 9249 (BA;US)
BICARBONATES
See ACID CARBONATES
BI-GAS PROCESS
Materials Testing
Critical study of materials for synthetic gas quench systems, 9: 9243 (BA;US)
BINARY MIXTURES
Thermodynamic Properties
Thermodynamic behavior of coal liquids in the presence of coal solids characterization of IOM and ash. First quarterly progress report, August 1-November 1, 1983, 9: 9234 (R;US)
Variational principle in rigid core expansion corresponding states methods, 9: 10370 (BA;US)
BIOCHEMICAL REACTION KINETICS
Markov Process
Lattice theory of reaction efficiency in compartmentalized systems. II. Reduction of dimensionality, 9: 10352 (J;US)
Tracer Techniques
Studies of cell kinetics in vital and necrotic tumor regions: Measurement of loss rate using ^{125}iododeoxyuridine, 9: 10784 (R;DE;In German)
BIOGAS
See METHANE
BIOGAS PROCESS
Meetings
Semi-liquid manure treatment, energy engineering and preservation of feeding stuffs, 9: 9591 (R;DE;In German)
BIOLOGICAL MATERIALS
Activation Analysis
Comparison of platinum determination in biological samples using RNAA with other analytical methods, 9: 10324 (RA;CS;In Czech)
Determination of nitrogen and phosphorus levels in biological materials by NAA method using 14 MeV neutrons, 9: 10327 (RA;CS;In Slovak)
Fully computerized system for processing gamma spectra in neutron activation analysis (NAA) of plants and fodders, 9: 10341 (J;US)
Trace element analysis of biological materials: Complementarity of PIXE and NAA, 9: 10342 (J;US)
Neutron Radiography
Fast neutron imaging by cellulose nitrate foils, 9: 10794 (R;DE)
Fast neutron radiography in biology and medicine, 9: 10795 (R;DE)
PIXE Analysis
Trace element analysis of biological materials: Complementarity of PIXE and NAA, 9: 10342 (J;US)
BIOLOGICAL RADIATION EFFECTS
See also RADIATION INJURIES
Epidemiology
Overview of current programs and trends in assessment of health effects, 9: 10841 (RA;US)
LET
Inactivation of mammalian cells and DNA with light and heavy ions, 9: 10855 (RA;DE;In German)
Radioprotective Substances
Effect of K, Mg salts of aspartic acid on neuromuscular activity of mice following chronic irradiation, 9: 10865 (RA;CS;In Slovak)
Response Modifying Factors
Repair of radiation damage of Micrococcus radioproteolyticus due to gamma and UV irradiation (Heating), 9: 10856 (RA;CS;In Czech)
Risk Assessment
Overview of current programs and trends in assessment of health effects, 9: 10841 (RA;US)
BIOLOGICAL REGENERATION
Biochemistry
Control of molting in crustacea, 9: 10763 (R;US)
BIOLOGICAL REPAIR
See also HOST-CELL REACTIVATION
Biochemical Reaction Kinetics
Comparative mutagenesis of human cells in vitro and in vivo. Progress report and financial statement, 9: 10768 (R;US)
Biochemistry
Inducible error-prone repair in B. subtilis. Progress report, May 1, 1983-April 30, 1984, 9: 10844 (R;US)
Tracer Techniques
Competition of macromolecular DNA and ^{3}H-dTh in unprogrammed DNA synthesis in LS/B1 cells, 9: 10857 (RA;CS;In Czech)
Kinetics of ^{3}H-dTh incorporation in DNA in unprogrammed DNA synthesis, 9: 10858 (RA;CS;In Czech)
BIOLOGY
Research Programs
Annual report 1982. Annex, 9: 10001 (R;FR)
BIOMASS
Coordinated Research Programs
IEA Forestry Energy. Annual Report 1982, 9: 9600 (R;SE)
Demonstration Programs
Midwest Appropriate Technology Small Grants Program project summaries, 9: 9977 (R;US)
Energy Source Development
IEA Forestry Energy. Annual Report 1982, 9: 9600 (R;SE)
Land Requirements
Land use survey for Austria - basic instrument to determine and to safeguard natural and economic resources in terms of land, especially with regard to energy recovery from biomass. 1st project stage, 9: 9996 (R;AT;In German)
Program Management
Office of Inspector General FY 1983 semiannual report, April 1, 1983-September 30, 1983, 9: 9967 (R;US)
BIOMASS CONVERSION PLANTS
Use only for plants converting biomass to fuel, do NOT use for plants preparing wastes and biomass for combustion.
Comparative Evaluations
Technical improvements of biogas plants, 9: 9592 (RA;DE;In German)
Specifications
Technical improvements of biogas plants, 9: 9592 (RA;DE;In German)
BIOMASS PLANTATIONS
Biological Fouling
Bio-engineering and materials testing, 9: 9604 (RA;US)
Field biological studies, 9: 9606 (RA;US)
Design
Design of the biological/engineering experimental farm, 9: 9603 (RA;US)
Economic Analysis
Designing cost accounting models for biomass energy systems and direct applications of geothermal energy, 9: 9658 (BA;US)
Materials Testing
Bio-engineering and materials testing, 9: 9604 (RA;US)
Mathematical Models
Designing cost accounting models for biomass energy systems and direct applications of geothermal energy, 9: 9658 (BA;US)
Research Programs
Marine biomass: New York State species and site studies. Annual report, December 1, 1981-November 30, 1982, 9: 9602 (R;US)
Site Selection
Site selection, 9: 9605 (RA;US)
BIOMEDICAL RADIOGRAPHY
See also INDUSTRIAL RADIOGRAPHY.
Image Processing
Proton beams for imaging applications, 9: 10810 (J;US)
BIRDS
Biological Radiation Effects
Effect of gamma radiation on morphological and functional changes in Japanese quail embryo, 9: 10885 (RA;CS;In Slovak)
BIRTH
See PARTURITION
BIS(2-ETHYLHEXYL)PHOSPHORIC ACID
See HDEHP

BISMUTH
Charge State
Projectile charge state dependence of M-shell ionization of Au, Pb, Bi and U by 1.42-MeV/amu fluorine ions, 9: 11027 (J;US)
Inner-Shell Ionization
Projectile charge state dependence of M-shell ionization of Au, Pb, Bi and U by 1.42-MeV/amu fluorine ions, 9: 11027 (J;US)
Ion-Atom Collisions
Influence of the nuclear reaction time onto the delta-electron emission studied by the reaction J → Au,Bi at 795 and 840 MeV, 9: 10999 (RA;DE;In German)
Projectile charge state dependence of M-shell ionization of Au, Pb, Bi and U by 1.42-MeV/amu fluorine ions, 9: 11027 (J;US)
Study of binding energies and electron densities in superheavy quasiatoms by means of delta-ray spectroscopy, 9: 11000 (RA;DE;In German)
BISMUTH 209 TARGET
Neutron Reactions
Analog giant resonance excitation via the (n,p) reactions, 9: 11127 (J;US)
Proton Reactions
Charge exchange (p,n) reactions to the isobaric analog states of high Z nuclei: 73< or =Z< or =92, 9: 11134 (J;US)
BITTER SPAR
See DOLOMITE
BITUMINOUS COAL
Combustion
Combustion characteristics of fine-ground coal, 9: 9305 (R;US)
Particle Size
Combustion characteristics of fine-ground coal, 9: 9305 (R;US)
BLACK AMERICANS
Fuel Consumption
Residential fuel consumption patterns for poor, black, and elderly households: a comparative study. Volume 2. Analytical assessment, 9: 10059 (R;US)
BLACK HOLES
Stochastic Processes
Stochastic processes and the dynamics of massive black holes, 9: 10976 (R;SU)
BLACK SHALES
Fractures
Fractured shale gas reservoir performance study--An offset well interference field test, 9: 9366 (J;US)
BLANKETS (BREEDING)
See BREEDING BLANKETS
BLIND RIVER
Geologic History
Genesis of Canadian uraniferous quartz-pebble conglomerate ores, 9: 9439 (RA;US)
Radiometric Surveys
Blind River uranium deposits: the ores and their setting, 9: 9436 (RA;US)
Stratigraphy
Genesis of Canadian uraniferous quartz-pebble conglomerate ores, 9: 9439 (RA;US)
Uranium Deposits
Blind River uranium deposits: the ores and their setting, 9: 9436 (RA;US)
BLOOD
Biological Radiation Effects
Factorial analysis of laboratory blood examination in personnel handling ionizing radiation, 9: 10886 (RA;CS;In Czech)
Low Dose Irradiation
Factorial analysis of laboratory blood examination in personnel handling ionizing radiation, 9: 10886 (RA;CS;In Czech)
Quantitative Chemical Analysis
Report on intercomparison A-13 of the determination of trace elements in freeze dried animal blood, 9: 10770 (R;XA)
BLOOD CIRCULATION
Radiocardiography
Nuclear cardiology. Fourier functional images in left ventricular wall motion analysis and an investigation into lesion detectability in myocardial perfusion scintigraphy, 9: 10799 (R;NL)
BLOOD SERUM
Activation Analysis
Trace element analysis of biological materials: Complementarity of PIXE and NAA, 9: 10342 (J;US)
PIXE Analysis
Trace element analysis of biological materials: Complementarity of PIXE and NAA, 9: 10342 (J;US)
BNL
Nuclear Data Collections
Recent references, 9: 11116 (J;US)
BODY TEMPERATURE
Remote Sensing
Comparison of remotely acquired deep-body and subdermal temperature measurements for detecting fever in cattle, 9: 10771 (R;US)
BOILER FUEL
See BOILER FUELS
BOILER FUELS
Fuel Substitution
Coal conversion: the CH experience, 9: 9985 (RA;US)
Coal slurries as alternate fuels for oil-designed boilers, 9: 10166 (BA;US)
BOILERS
See also REFUSE-FUELED BOILERS
Air Pollution
Emissions from coal combustion and fuel oil combustion, 9: 9266 (R;SE;In Swedish)
Long-term study of a 240 MW coal powder fueled heat electric station, 9: 9282 (R;SE;In Swedish)
Air Pollution Control
Argonne high sulfur dry scrubber, 9: 9265 (RA;US)
Corrosion
Corrosion in H.E.-boilers and analysis of flue gas condensate, 9: 10466 (BA;US)
Long term optimum performance/corrosion tests of combustion modifications for utility boilers. Host site: Columbus and Southern Ohio Electric Company, Conesville No. 5. Final report Jan 1979-Nov 1981, 9: 10465 (R;US)
Design
Exchanger for the simultaneous transfer of heat and moisture for a condensation boiler, 9: 10100 (BA;US;FR)
Use of the pot furnace for the prediction of stoker performance, 9: 9312 (BA;US)
Direct Contact Heat Exchangers
Exchanger for the simultaneous transfer of heat and moisture for a condensation boiler, 9: 10100 (BA;US;FR)
Efficiency
Long-term study of a 240 MW coal powder fueled heat electric station, 9: 9282 (R;SE;In Swedish)
Emission
Emissions from coal combustion and fuel oil combustion, 9: 9266 (R;SE;In Swedish)
Mutagenicity in emissions from coal and oil fired boilers as detected by the salmonella/microsome assay, 9: 10657 (R;SE)
Gas Burners
Development of new combustion technology for high performance gas appliances, 9: 10113 (BA;US)
Modifications
Long term optimum performance/corrosion tests of combustion modifications for utility boilers. Host site: Columbus and Southern Ohio Electric Company, Conesville No. 5. Final report Jan 1979-Nov 1981, 9: 10465 (R;US)
Pulse Combustion
Development of new combustion technology for high performance gas appliances, 9: 10113 (BA;US)
Retrofitting
Coal slurries as alternate fuels for oil-designed boilers, 9: 10166 (BA;US)
BOILING WATER COOLED AND MODERATED REACTO
See BWR TYPE REACTORS
BOLTZMANN-VLASOV EQUATION
Mathematical Operators
Generalized virial relations and the theory of subdynamics, 9: 11165 (R;XA)

BONE FRACTURES
Healing
Femoral head vitality after intracapsular hip fracture. 490 cases studied by intravital tetracyclic labeling and Tc-MDP radionuclide scintimetry, 9: 10803 (R;SE)
Radioinduction
Comparison of radiological changes in humans and beagles with skeletal deposits of radium, 9: 10894 (J;GB)
BONE JOINTS
Scintiscanning
Femoral head vitality after intracapsular hip fracture. 490 cases studied by intravital tetracyclic labeling and Tc-MDP radionuclide scintimetry, 9: 10803 (R;SE)
BONE MARROW
Stem Cells
Relationship between number of spleen colonies and ^{125}IdUrd incorporation into spleen and femur, 9: 10893 (J;US)
BONE MARROW CELLS
Sister Chromatid Exchanges
Acute and genetic toxicity of 1-nitropyrene and its fate after single oral doses to rats, 9: 10941 (J;US)
BONE TISSUES
Radiochemical Analysis
Measured ^{234,235}U and fallout ^{239,240}Pu in human bone ash from Nepal and Australia: skeletal alpha dose, 9: 10898 (J;GB)
BONES
See SKELETON
BONNEVILLE POWER ADMINISTRATION
Rate Structure
Wholesale power rate schedules and general rate schedule provisions, 9: 10036 (R;US)
Surplus Power
Issue backgrounder: surplus power, 9: 10035 (R;US)
BOREHOLE LINKING
See also ELECTROLINKING
Electrolinking
Mathematical modeling of electrolinking, 9: 9254 (BA;US)
BOREHOLES
Electromagnetic Surveys
Alterant geophysical tomography, 9: 10963 (R;US)
Indirect rock mass investigations for optimizing borehole drilling programs. Summary of wave propagation geophysical techniques. Volume 2, 9: 10961 (R;US)
Seismic Surveys
Indirect rock mass investigations for optimizing borehole drilling programs. Summary of wave propagation geophysical techniques. Volume 2, 9: 10961 (R;US)
BORON
PIXE Analysis
X-ray fluorescence analysis of metallic glasses, 9: 10332 (RA;CS;In Slovak)
X-Ray Fluorescence Analysis
X-ray fluorescence analysis of metallic glasses, 9: 10332 (RA;CS;In Slovak)
BORON ALLOYS
Ductility
Radiation-induced changes of the ductility of amorphous $Fe_{40}Ni_{40}B_{20}$, 9: 10226 (R;DE)
Physical Radiation Effects
Radiation-induced changes of the ductility of amorphous $Fe_{40}Ni_{40}B_{20}$, 9: 10226 (R;DE)
Spin Glass State
Spin correlations and reentrant spin-glass behavior in amorphous Fe-Mn alloys: Statics, 9: 10249 (J;US)
BORON CARBIDES
Physical Radiation Effects
Stability of boron carbide crystal structure under irradition using fast reactor spectrum, 9: 10270 (R;SU;In Russian)
Stability of irradiated boron carbide under isothermal annealing conditions, 9: 10269 (R;SU;In Russian)
Swelling
Stability of irradiated boron carbide under isothermal annealing conditions, 9: 10269 (R;SU;In Russian)
BOROSILICATE GLASS
Leaching
Electrokinetic effects and the concepts of zeta potential and zero point of charge, 9: 9473 (R;US)
Results from long-term use of the MCC-1 static leach test method, 9: 9501 (J;US)
The effects of surface area to solution volume on waste glass leaching, 9: 9494 (J;US)
Surface Area
The effects of surface area to solution volume on waste glass leaching, 9: 9494 (J;US)

Documentation
Standards for maintenance documentation of COSMOS programs, 9: 9811 (R;GB)
CABLES (ELECTRIC)
See ELECTRIC CABLES
CADMIUM
Activation Analysis
Simultaneous determination of Cd, Cu, Mo, Zn in biological samples using neutron activation analysis combined with radiochemical separation, 9: 10322 (RA;CS;In Czech)
Trace element analysis of biological materials: Complementarity of PIXE and NAA, 9: 10342 (J;US)
Biological Effects
Effects of metal compounds on chromosome length, 9: 10924 (R;SE)
Kidney injuries and cadmium. Riskestimation concerning kidney injuries due to cadmium exposure, 9: 10925 (R;SE;In Swedish)
Queuine-containing isoacceptor of tyrosine tRNA in Drosophila melanogaster - alteration of levels by divalent cations, 9: 10942 (J;NL)
Consumption Rates
Battery-related wastes in the UK (United Kingdom) and their disposal, 9: 10146 (R;US)
Ecological Concentration
Concentration of heavy metals in water plants of some Austrian running waters, 9: 10932 (R;AT;In German.)
Emission Spectroscopy
Inductively coupled plasma-atomic emission spectrometry (ICP-AES) in support of nuclear waste management, 9: 10311 (R;US)
Intestinal Absorption
Gastrointestinal absorption of cadmium in mice during gestation and lactation, 9: 10944 (J;US)
Materials Recovery
Battery-related wastes in the UK (United Kingdom) and their disposal, 9: 10146 (R;US)
PIXE Analysis
Trace element analysis of biological materials: Complementarity of PIXE and NAA, 9: 10342 (J;US)
Quantitative Chemical Analysis
Partitioning of copper among copper-binding proteins in the mussel Mytilus edulis exposed to soluble copper, 9: 10935 (R;US)
CADMIUM SELENIDE SOLAR CELLS
Efficiency
Electrochemical solar cells using CdSe thin film electrodes, 9: 9618 (J;US)
Research Programs
Progress in the SERI-DOE photoelectrochemical cell program, 9: 9625 (J;US)
CADMIUM SULFIDES
Crystal Growth
Growth and characterization of single crystal (Cd, Zn)S thin films relevant to the study of the (Cd, Zn)S/Cu/sub x/S photovoltaic cell, 9: 9599 (R;US)
CADMIUM TELLURIDE DETECTORS
See CDTE SEMICONDUCTOR DETECTORS
CADMIUM TELLURIDE SOLAR CELLS
Heterojunctions
A 10% efficient ITO-CdTe heterojunction solar cell, 9: 9628 (J;US)
Quantum Efficiency
A 10% efficient ITO-CdTe heterojunction solar cell, 9: 9628 (J;US)
Stability
A 10% efficient ITO-CdTe heterojunction solar cell, 9: 9628 (J;US)

CADMIUM TELLURIDES
Electrodeposition
Investigation of chemical spray and electrodeposition techniques for the growth of thin film CdTe solar cell materials. Final report, 9: 9594 (R;US)
Electron Microprobe Analysis
Microanalysis of candidate thin & thick film photovoltaic materials, 9: 9624 (J;US)
Microstructure
Microanalysis of candidate thin & thick film photovoltaic materials, 9: 9624 (J;US)
Physical Radiation Effects
Radiation defects in electron irradiated narrow gap semiconductors Hgsub(1-x)Cdsub(x)Te, 9: 10295 (RA;SU;In Russian)
Roughness
Microanalysis of candidate thin & thick film photovoltaic materials, 9: 9624 (J;US)
Spray Coating
Investigation of chemical spray and electrodeposition techniques for the growth of thin film CdTe solar cell materials. Final report, 9: 9594 (R;US)
CAES
See COMPRESSED AIR ENERGY STORAGE
CAFETERIAS
See RESTAURANTS
CALCITE
Decomposition
Mineral reactions during high temperature oil shale processing, 9: 9418 (J;US)
CALCIUM
Activation Analysis
Multielement neutron activation analysis of an iron ore, 9: 10344 (J;US)
Metabolism
Calcium metabolism in mice following sublethal irradiation, 9: 10874 (RA;CS;In Czech)
PIXE Analysis
Large scale study of tooth enamel, 9: 10343 (J;US)
CALCIUM 40 TARGET
Alpha Reactions
Folding model analysis of alpha-particle elastic scattering with a semirealistic density dependent effective interaction, 9: 11124 (R;US)
Proton Reactions
Clark et al. and McNeil et al. respond, 9: 11144 (J;US)
CALCIUM COMPOUNDS
See also CALCIUM OXIDES
Electrochemistry
Electrochemical reduction of calcium chromate, 9: 10371 (J;US)
Reduction
Electrochemical reduction of calcium chromate, 9: 10371 (J;US)
CALCIUM FLUORIDES
Crystal Field
Study of new $4f^7$ levels of Eu^{2+} in CaF_2 and SrF_2 using two-photon absorption spectroscopy, 9: 10303 (J;US)
CALCIUM ISOTOPES
Isotope Separation
Mound activities in chemical and physical research: January-June 1983, 9: 9527 (R;US)
CALCIUM OXIDES
See also ZIRCONOLITE
Physical Radiation Effects
Thermoluminescence of X-irradiated CaO and CaO:Li single crystals, 9: 10276 (J;DD)
CALIFORNIA
East Mesa Geothermal Field
Nonisothermal effects during injection and fall-off tests, 9: 9741 (J;US)
Electric Utilities
Evaluation of a community-based electricity load management program, 9: 10042 (J;GB)
Houses
The applicability of energy models to occupied houses: summer electric use in Davis, 9: 10114 (J;GB)
Offshore Operations
Draft environmental impact statement: proposed polymetallic sulfide minerals lease offering, Gorda Ridge area offshore Oregon and northern California, 9: 10757 (R;US)
CALIFORNIUM 252
Uses
An in-situ neutron activation analysis system for assaying metal ores, 9: 10624 (J;US)
CALORIMETERS
Specifications
Low-temperature calorimeter for measuring heat capacity in magnetic fields up to 20 T, 9: 10293 (R;SU;In Russian)
CALORIMETERS (PARTICLE)
See SHOWER COUNTERS
CAMAC SYSTEM
Computer Application to Measurement And Control.
Multi-Channel Analyzers
Controller of multichannel pulse analyzer in CAMAC system, 9: 10630 (R;SU;In Russian)
CANADA
See also NORTHWEST TERRITORIES
ONTARIO
QUEBEC
Environmental Policy
Acid rain: the need to speak out, 9: 9288 (BA;US)
Radioactive Waste Disposal
Evaluation of phyllosilicates as a buffer component in the disposal of nuclear fuel waste, 9: 9456 (R;CA)
Radioactive Waste Management
Fourth annual report of the Canadian Nuclear Fuel Waste Management Program, 9: 9455 (R;CA)
Seismicity
Canadian Seismic Agreement, 9: 10962 (R;US)
CANCER

CAPSICUM
Genetic Radiation Effects
Chimerism in M_1 plants of Vicia faba, Capsicum annuum and Linum usitatissimum, 9: 10854 (RA;XA)
Radiation Chimeras
Chimerism in M_1 plants of Vicia faba, Capsicum annuum and Linum usitatissimum, 9: 10854 (RA;XA)
CARBINOL
See METHANOL
CARBON
See also GRAPHITE
Activation Analysis
Laboratory and field acceptance performance of CONAC, 9: 9264 (R;US)
Degassing
Vacuum outgassing of various materials, 9: 10445 (R;US)
Electrodeposited Coatings
Electrodeposition of zinc on glassy carbon from $ZnCl_2$ and $ZnBr_2$ electrolytes, 9: 10373 (J;US)
Ion-Atom Collisions
Cross section for radiative electron capture (REC) by 20-80 MeV Cl ions incident on C and Cu foils, 9: 11043 (J;US)
Origin
Distribution and sedimentary arrangement of carbon in South African proterozoic placer deposits, 9: 10957 (RA;US)
Thermodynamic Activity
Measurement of the activity coefficient of carbon in steels in liquid sodium, 9: 10225 (R;FR;In French)
CARBON 12
Energy Levels
Spin alignment and phase angles in $^{12}C+ ^{12}C$ inelastic scattering, 9: 11119 (J;US)
CARBON 12 REACTIONS
Fission
Fission of polonium, osmium, and erbium composite systems, 9: 11136 (J;US)

Inelastic Scattering
Spin alignment and phase angles in $^{12}C+ ^{12}C$ inelastic scattering, 9: 11119 (J;US)
CARBON 12 TARGET
Carbon 12 Reactions
Spin alignment and phase angles in $^{12}C+ ^{12}C$ inelastic scattering, 9: 11119 (J;US)
Neutron Reactions
Evaluation of neutron nuclear data for ^{12}C, 9: 11118 (R;JP)
Pion Minus Reactions
Isospin effects in π^{+-} ^{12}C, ^{13}C, and ^{14}C at 65 and 80 MeV, 9: 11120 (J;US)
Pion Plus Reactions
Isospin effects in π^{+-} ^{12}C, ^{13}C, and ^{14}C at 65 and 80 MeV, 9: 11120 (J;US)
CARBON 13 TARGET
Pion Minus Reactions
Isospin effects in π^{+-} ^{12}C, ^{13}C, and ^{14}C at 65 and 80 MeV, 9: 11120 (J;US)
Pion Plus Reactions
Isospin effects in π^{+-} ^{12}C, ^{13}C, and ^{14}C at 65 and 80 MeV, 9: 11120 (J;US)
CARBON 14 COMPOUNDS
Uptake
Greenhouse and laboratory experiments, 9: 9607 (RA;US)
CARBON 14 TARGET
Pion Minus Reactions
Isospin effects in π^{+-} ^{12}C, ^{13}C, and ^{14}C at 65 and 80 MeV, 9: 11120 (J;US)
Pion Plus Reactions
Isospin effects in π^{+-} ^{12}C, ^{13}C, and ^{14}C at 65 and 80 MeV, 9: 11120 (J;US)
CARBON CYCLE
Biological Pathways
Paths of carbon and their regulation, 9: 10782 (BA;NL)
CARBON DIOXIDE
Absorption Spectra
Differential optical absorption techniques for diagnostics of coal gasification. Technical progress report, October, November, December 1982, 9: 9260 (R;US)
Radiation measurement in flames and furnaces, 9: 10394 (BA;US)
Adsorption
Data base for the analysis of compositional characteristics of coal seams and macerals. Technical progress report, August 1982-January 1983, 9: 9261 (R;US)
Determination of the surface reactivity of coal powders. Fifth quarterly report, September 1, 1983-November 30, 1983, 9: 9262 (R;US)
Air Pollution Abatement
CO_2 emission tax policy: a sensitivity analysis, 9: 9986 (R;US)
Air Pollution Control
Energy supply and demand implications of CO_2, 9: 10759 (J;GB)
Chemical Reactions
Conversion of an n^5-C_6H_5 complex into a cyclopentadienylidene ketene complex, 9: 10366 (J;US)
Detection
Application of infrared emitting semiconductor diodes to the detection of various gases, 9: 10633 (BA;US)
Dew Point
PVT, VLE and H data from Burnett-isochoric apparatus (Bubble point and dew point), 9: 9411 (BA;US)
Enthalpy
Thermodynamic properties of gaseous mixtures containing water, 9: 9412 (BA;US)
Flammability
Lean flammability limit of some gaseous mixtures involving methane, 9: 9414 (BA;US)
Measuring Instruments
Application of infrared emitting semiconductor diodes to the detection of various gases, 9: 10633 (BA;US)
Monitoring
Application of infrared emitting semiconductor diodes to the detection of various gases, 9: 10633 (BA;US)
Phase Studies
Determination of miscibility pressure direct observation method. Final report, 9: 9326 (R;US)
Photolysis
Kinetic measurements on elementary fossil fuel combustion reactions over wide temperature ranges. Progress report, 1 May-31 December 1983, 9: 10379 (R;US)
Production
Production of medical radionuclides with a 24 MeV proton cyclotron, 9: 10809 (J;US)
Thermodynamic Properties
PVT, VLE and H data from Burnett-isochoric apparatus (Bubble point and dew point), 9: 9411 (BA;US)
Viscosity
Diffusion of gases in porous solids: simulations and measurements. Fifth quarterly technical proogress report, July 16, 1983-October 15, 1983, 9: 10427 (R;US)
CARBON DIOXIDE INJECTION
Bench-Scale Experiments
Determination of miscibility presure direct observation method. Final report, 9: 9326 (R;US)
CARBON DIOXIDE LASERS
Reviews
Development of CO_2 and KrF gas lasers as drivers for inertial confinement fusion, 9: 11317 (R;US)
CARBON IONS
Ion-Atom Collisions
L-Shell ionisation in energetic ion-atom-collisions, 9: 10997 (RA;DE;In German)
CARBON MONOXIDE
Absorption Spectra
Differential optical absorption techniques for diagnostics of coal gasification. Technical progress report, October, November, December 1982, 9: 9260 (R;US)
Radiation measurement in flames and furnaces, 9: 10394 (BA;US)
Combustion Kinetics
Combustion characteristics of low- and intermediate-Btu gases, 9: 10395 (BA;US)
Compressibility
Fluid property research at the National Bureau of Standards, Boulder, 9: 9407 (BA;US)
Ecological Concentration
Air pollution from oxides of nitrogen, carbon monoxide and hydrocarbons, 9: 10663 (R;US)
Guidelines for monitoring indoor air quality. Research report, 9: 10670 (R;US)
Enthalpy
Thermodynamic properties of gaseous mixtures containing water, 9: 9412 (BA;US)
Flammability
Lean flammability limit of some gaseous mixtures involving methane, 9: 9414 (BA;US)
Hydrogenation
Cation promotion effects in zeolite-supported F-T catalysts. First quarterly report, September-November 1983, 9: 9538 (R;US)
Metal boride catalysts for indirect liquefaction. Quarterly technical progress report, September 1-November 30, 1983, 9: 9536 (R;US)
Methanation
Methanation kinetics with transition element catalysts, 9: 9251 (BA;US)
Methanation of CO rich gases at high pressures, 9: 9252 (BA;US)
Potential of novel methanation catalysts, 9: 9250 (BA;US)
Pollution Sources
Air pollution from oxides of nitrogen, carbon monoxide and hydrocarbons, 9: 10663 (R;US)
CARBON OXIDE SULFIDE
See CARBON OXYSULFIDE
CARBON OXYSULFIDE
Absorption Spectra
Differential optical absorption techniques for diagnostics of coal gasification. Technical progress report, October, November, December 1982, 9: 9260 (R;US)
Environmental Transport
The flux of sulfur-containing gases to vegetation, 9: 10671 (J;GB)

CARBON STEELS
Corrosion
Corrosion of metals in coal liquefaction processes. Final report, 9: 9223 (R;US)
Critical study of materials for synthetic gas quench systems, 9: 9243 (BA;US)
Nevada Nuclear Waste Storage Investigations. Quarterly report, April-June 1983, 9: 9486 (R;US)
Embrittlement
Retained austenite and tempered martensite embrittlement in medium carbon steels, 9: 10258 (J;US)
Tempering
Retained austenite and tempered martensite embrittlement in medium carbon steels, 9: 10258 (J;US)
CARBON SULFIDES
Absorption Spectra
Differential optical absorption techniques for diagnostics of coal gasification. Technical progress report, October, November, December 1982, 9: 9260 (R;US)
Environmental Transport
The flux of sulfur-containing gases to vegetation, 9: 10671 (J;GB)
CARBONATE ROCKS
See also LIMESTONE
Neutron-Gamma Logging
Feasibility studies of a carbon/oxygen logging tool for evaluating the CO_2 content of the medium in nuclear device containment, 9: 10635 (R;US)
CARBONYL SULFIDE
See CARBON OXYSULFIDE
CARBONYLS
Only for compounds of metals with carbonyl radicals.
Chemical Analysis
Mossbauer and infrared studies of matrix-isolated iron-carbonyl complexes, 9: 10365 (J;US)
Infrared Spectra
Mossbauer and infrared studies of matrix-isolated iron-carbonyl complexes, 9: 10365 (J;US)
CARBOXYLIC ACIDS
See also AMINO ACIDS
Biosynthesis
Whole-cell bioconversion of vanillin to vanillic acid by Streptomyces viridosporus, 9: 10826 (J;US)
CARCINOGENESIS
Risk Assessment
Dose-response relationships for bone cancers from plutonium in dogs and people, 9: 10900 (J;GB)
CARCINOMAS
Epidemiology
Retention of uranium in the chest: implications of findings in vivo and postmortem, 9: 10896 (J;GB)
Radiotherapy
Malignant tumours of the vulva. A study of the effects of radiotherapy, surgery and cho-emotherapy in combination or used alone, 9: 10804 (R;SE)
CARDIAC OUTPUT
See BLOOD CIRCULATION
CAROLINA POWER LIGHT ROBINSON-2 REACTOR
See ROBINSON-2 REACTOR
CASCADE IMPACTORS
Calibration
Instruments and techniques for dynamic particle size measurement of coal dust. Open file report 1 Dec 76-30 Nov 80, 9: 9295 (R;US)
CASCADE SOLAR CELLS
Comparative Evaluations
Superlattice cascade solar cell, 9: 9647 (J;US)
Efficiency
Superlattice cascade solar cell, 9: 9647 (J;US)
Junctions
Superlattice cascade solar cell, 9: 9647 (J;US)
Optimization
Superlattice cascade solar cell, 9: 9647 (J;US)
CASINGS
See COVERINGS
CASINGS (WELL)
See WELL CASINGS
CASKS
See also SPENT FUEL CASKS
Design
Transportation packagings for high-level wastes and unprocessed transuranic wastes, 9: 9453 (J;US)
CAT SCANNING
Planning
Transverse tomography and radiotherapy. The use of computer tomography and transverse analog tomography for radiotherapy treatment planning, 9: 10797 (R;NL;In Dutch)
CATALYSTS
Chemical Preparation
Catalytic coal liquefaction. Quarterly report, October-December 1983, 9: 9227 (R;US)
Cation promotion effects in zeolite-supported F-T catalysts. First quarterly report, September-November 1983, 9: 9538 (R;US)
Metal boride catalysts for indirect liquefaction. Quarterly technical progress report, September 1-November 30, 1983, 9: 9536 (R;US)
New catalysts for coal liquid upgrading. Quarterly report, September 1-November 30, 1983, 9: 9230 (R;US)
Novel catalytic methods for heteroatom removal in coal liquids upgrading. Quarterly report No. 1, September 1-December 1, 1983, 9: 9233 (R;US)
Comparative Evaluations
Catalytic coal liquefaction. Quarterly report, October-December 1983, 9: 9227 (R;US)
New catalysts for coal liquid upgrading. Quarterly report, September 1-November 30, 1983, 9: 9230 (R;US)
Promotion effects on the synthesis of higher alcohols. Fifth quarterly report, September 1983-November 1983, 9: 9547 (R;US)
Performance Testing
Metal boride catalysts for indirect liquefaction. Quarterly technical progress report, September 1-November 30, 1983, 9: 9536 (R;US)
New catalysts for coal liquid upgrading. Quarterly report, September 1-November 30, 1983, 9: 9230 (R;US)
Novel catalytic methods for heteroatom removal in coal liquids upgrading. Quarterly report No. 1, September 1-December 1, 1983, 9: 9233 (R;US)
Promoters
Promotion effects on the synthesis of higher alcohols. Fifth quarterly report, September 1983-November 1983, 9: 9547 (R;US)
Specificity
Cation promotion effects in zeolite-supported F-T catalysts. First quarterly report, September-November 1983, 9: 9538 (R;US)
Metal boride catalysts for indirect liquefaction. Quarterly technical progress report, September 1-November 30, 1983, 9: 9536 (R;US)
Thermodynamic constraints in catalytic reactions, 9: 10356 (R;US)
Structural Chemical Analysis
Characterization of supported iron catalysts during Fischer-Tropsch synthesis. Technical progress report, August 1, 1983-December 31, 1983, 9: 9537 (R;US)
Molecular surface science of heterogeneous catalysis. History and perspective, 9: 10240 (R;US)
Surface Properties
Characterization of supported iron catalysts during Fischer-Tropsch synthesis. Technical progress report, August 1, 1983-December 31, 1983, 9: 9537 (R;US)
Temperature Dependence
New catalysts for coal liquid upgrading. Quarterly report, September 1-November 30, 1983, 9: 9230 (R;US)
CATECHOLAMINES
Biological Radiation Effects
Catecholamine level and monoamino oxidase activity following irradiation, 9: 10879 (RA;CS;In Slovak)
CATHODES

CESIUM
Activation Analysis
Trace element analysis of biological materials: Complementarity of PIXE and NAA, 9: 10342 (J;US)
Diffusion
Diffusion in crystalline rocks of some sorbing and nonsorbing species, 9: 9489 (R;SE)

PIXE Analysis
Trace element analysis of biological materials: Complementarity of PIXE and NAA, 9: 10342 (J;US)
Solubility
Incorporation of radionuclides in crystalline titanates, 9: 9511 (J;US)
CESIUM 137
Body Burden
^{137}Cs in Norwegian Lapps spring 1981, 9: 10714 (R;NO;In Norwegian)
Electrochemistry
Chemical behavior of long-lived radionuclides in the marine environment, 9: 10749 (R;US)
Environmental Transport
Radionuclide transport processes in terrestrial ecosystems, 9: 10720 (J;US)
Ion Exchange
Reversible ion-exchange fixation of cesium-137 leading to mobilization from reservoir sediments, 9: 10753 (J;GB)
Radioecological Concentration
An evaluation of soil sampling for ^{137}Cs using various field-sampling volumes, 9: 10719 (J;GB)
Chemical behavior of long-lived radionuclides in the marine environment, 9: 10749 (R;US)
Standards for concentrations of radionuclides in soil: basis and implementation, 9: 11154 (RA;US)
Study of gamma-emitting radionuclides present in the sediments and algae of the "Baie de l'Orne" (Central Normandy Coast) collecting during the years 1980 - 1982, 9: 10752 (R;FR;In French)
Radionuclide Migration
Groundwater monitoring in the Savannah River Plant low-level waste burial ground: a summary and interpretation of the analytical data, 9: 9514 (R;US)
CESIUM COMPLEXES
Nuclear Magnetic Resonance
Enhanced nuclear magnetic resonance in a non-magnetic cubic doublet. A study performed with a ^{4}He-circulating dilution refrigerator, 9: 10234 (R;NL)
CESIUM OXIDES
Dissolution
Dissolution studies of $CsAlSi_5O_{12}$, 9: 10280 (J;US)
CFFF
See MHD GENERATOR CFFF
CHALCOGENIDES
See also OXIDES
Chemical Reactions
Geochemistry and morphology of mineral components from the fossil gold and uranium placers of the Witwatersand, 9: 9429 (RA;US)
CHALCOPYRITE
Leaching
A partial equilibrium model to characterize the precipitation of ferric ion during the leaching of chalcopyrite with ferric sulfate, 9: 10339 (J;US)
CHALKS
See LIMESTONE
CHARCOAL
Gasification
Solar gasification of carbonaceous materials, 9: 9541 (J;GB)
CHARGE CARRIERS
Lifetime
The measurement of variations in minority carrier lifetime due to microstructural defects in large area polysilicon wafers, 9: 9644 (J;US)
Recombination
Impurities in polycrystalline silicon solar cells, 9: 9639 (J;US)
CHARGE-COUPLED DEVICES
Performance
First measurement of efficiency and precision of CCD detectors for high energy physics, 9: 10614 (R;GB)
CHARGED-PARTICLE ACTIVATION
See ACTIVATION ANALYSIS
CHARPAK CHAMBERS
See MULTIWIRE PROPORTIONAL CHAMBERS
CHELATES
Geochemistry
Temporal stability of chelated Co and Zn in reducing geochemical environments, 9: 9513 (J;US)
CHEMICAL BONDS
Cleavage
Coal liquefaction model studies: free radical chain decomposition of diphenylpropane, dibenzyl ether, and phenyl ether via β-scission reactions, 9: 9259 (J;US)
CHEMICAL EFFLUENTS
Biological Effects
Study of radionuclides interaction with hydrophytocenosis. Part of a coordinated programme on isotopic-tracer-aided research and monitoring on agricultural residue-biological interactions in aquatic ecosystems. Final report for the period 1 January 1977 - 3 June 1982, 9: 10848 (R;XA)
CHEMICAL EXPLOSIONS
Design
Hard rock excavation at the CSM/OCRD test site using Swedish blast design techniques, 9: 10965 (R;US)
CHEMICAL FEEDSTOCKS
Marketing Research
Systems analysis of hydrogen supplementation in natural gas pipelines, 9: 9534 (BA;US)
CHEMICAL HEAT PUMPS
Design
Metal hydride heat pump, 9: 10163 (J;US)
The US chemical heat pump program--an overview, 9: 10416 (J;GB)
Hydrides
Metal hydride heat pump, 9: 10163 (J;US)
Optimization
Adiabatic absorption and desorption for improvement of temperature-boosting absorption heat pumps, 9: 10117 (J;US)
Research Programs
The US chemical heat pump program--an overview, 9: 10416 (J;GB)
Technology Utilization
The US chemical heat pump program--an overview, 9: 10416 (J;GB)
CHEMICAL REACTION KINETICS
Markov Process
Lattice theory of reaction efficiency in compartmentalized systems. II. Reduction of dimensionality, 9: 10352 (J;US)
Sensitivity Analysis
Sensitivity analysis and model optimization for reaction-diffusion systems, 9: 10346 (R;US)
CHEMICAL REACTIONS
See also ALKYLATION
DESULFURIZATION
FISCHER-TROPSCH SYNTHESIS
HYDROGENATION
METHANATION
METHYLATION
REDOX REACTIONS
Catalysts
Thermodynamic constraints in catalytic reactions, 9: 10356 (R;US)
Constraints
Thermodynamic constraints in catalytic reactions, 9: 10356 (R;US)
CHEMICAL REACTORS
Comparative Evaluations
Evaluation of the slurry methanol reactor, 9: 9546 (R;US)
Construction
Kinetic measurements on elementary fossil fuel combustion reactions over wide temperature ranges. Progress report, 1 May-31 December 1983, 9: 10379 (R;US)
Deposits
Application of optical and electron microscopy to coal conversion systems, 9: 9258 (BA;US)
Design
Kinetic measurements on elementary fossil fuel combustion reactions over wide temperature ranges. Progress report, 1 May-31 December 1983, 9: 10379 (R;US)
Economic Analysis
Evaluation of the slurry methanol reactor, 9: 9546 (R;US)

Fluid Mechanics
Study of multiphase flow useful to understanding scaleup of coal liquefaction reactors. Technical progress report, September 1-November 30, 1983, 9: 9229 (R;US)
Jets
Statistical study of the grid zone behavior in a shallow gas-solid fluidized bed using a mini-capacitance probe, 9: 10432 (J;GB)
Mathematical Models
Mathematical modelling of an entrained coal gasifier, 9: 9241 (BA;US)
Multiphase Flow
Study of multiphase flow useful to understanding scaleup of coal liquefaction reactors. Technical progress report, September 1-November 30, 1983, 9: 9229 (R;US)
Performance
Effects of mass transfer on the performance of slurry reactors used for Fischer-Tropsch synthesis, 9: 9542 (J;GB)
Scaling Laws
Study of multiphase flow useful to understanding scaleup of coal liquefaction reactors. Technical progress report, September 1-November 30, 1983, 9: 9229 (R;US)
Temperature Control
Evaluation of the slurry methanol reactor, 9: 9546 (R;US)

CHEMICALS
See DYES
PIGMENTS
PLASTICIZERS
SURFACTANTS

CHEMISTRY
See also GEOCHEMISTRY
RADIATION CHEMISTRY
SOIL CHEMISTRY
Data Analysis
Three-dimensional graphics for scientific data display and analysis, 9: 10308 (R;US)
Research Programs
Annual report 1982. Annex, 9: 10001 (R;FR)

CHERENKOV COUNTERS
Radiator Counters
500x500x40 mm threshold Cherenkov counter with the radiator of amino-G-acid aqueous solution, 9: 10591 (R;SU;In Russian)
Specifications
500x500x40 mm threshold Cherenkov counter with the radiator of amino-G-acid aqueous solution, 9: 10591 (R;SU;In Russian)
Large-aperture gas Cherenkov counter with wave shifter, 9: 10589 (R;SU;In Russian)

CHERENKOV DETECTORS
See CHERENKOV COUNTERS

CHICKENS
Biological Radiation Effects
Changes in utility value and blood count of chickens following chronic irradiation, 9: 10884 (RA;CS;In Slovak)

CHINA
Linear Accelerators
Linear electron accelerators for medicine and radiation processing developed in Beijing, China, 9: 10540 (J;US)

CHINA CLAY
See KAOLIN

CHINESE HAMSTER OVARY CELLS
See CHO CELLS

CHIRALITY
Chiral anomalies and differential geometry, 9: 11087 (R;US)

CHLOR-ALKALI INDUSTRY
See CHLORINE

CHLORIDES
See also ALUMINIUM CHLORIDES
ANTIMONY CHLORIDES
IRON CHLORIDES
LANTHANUM CHLORIDES
MAGNESIUM CHLORIDES
POTASSIUM CHLORIDES
SODIUM CHLORIDES
ZINC CHLORIDES
Corrosive Effects
Corrosion of metals in coal liquefaction processes. Final report, 9: 9223 (R;US)
Corrosion in H.E.-boilers and analysis of flue gas condensate, 9: 10466 (BA;US)
Membrane Transport
K562 cell anion exchange differs markedly from that of mature red blood cells, 9: 10831 (J;US)

CHLORINATED ALIPHATIC HYDROCARBONS
See also PVC
Genetic Effects
Genetic effects of 1,2-dibromo-3-chloropropane (DBCP) in Drosophila, 9: 10945 (J;US)
Physical Properties
Mound activities in chemical and physical research: January-June 1983, 9: 9527 (R;US)

CHLORINATED AROMATIC HYDROCARBONS
Removal
Fermilab's approach to PCBs, 9: 10705 (RA;US)
Influence of PCB and hazardous waste regulations on the operations of the Western Area Power Administration, 9: 9984 (RA;US)
Waste Management
Molten salt destruction of hazardous materials process and data update, 9: 10654 (R;US)

CHLORINATION
Temperature Effects
The effect of temperature on the dissipation of chlorine in seawater, 9: 10732 (BA;US)
Tracer Techniques
Study of synthetic carbide behaviour in chlorination using radioactive tracers, 9: 10348 (RA;CS;In Czech)

CHLORINE
Activation Analysis
Determination of nitrogen, phosphorus, potassium, and chlorine levels in fertilizers by NAA using 14 MeV neutrons, 9: 10326 (RA;CS;In Slovak)
Laboratory and field acceptance performance of CONAC, 9: 9264 (R;US)
Amperometry
Some problems in the determination of total residual "chlorine" in chlorinated sea-water, 9: 10729 (J;GB)
The effect of temperature on the dissipation of chlorine in seawater, 9: 10732 (BA;US)
Biological Effects
Systematic studies of the effect of aggressive gases on sprucewood, 9: 10930 (R;DE;In German)
Photochemical Reactions
The effects of light on the dissipation of chlorine in sea-water, 9: 10728 (J;GB)

CHLORINE CHLORIDES
See CHLORINE

CHLORINE FLUORIDES
Removal
Trapping of gaseous fluoride emissions on solid sorbents, 9: 10650 (RA;US)

CHLORINE IONS
Electron Capture
Cross section for radiative electron capture (REC) by 20-80 MeV Cl ions incident on C and Cu foils, 9: 11043 (J;US)
Ion-Atom Collisions
Cross section for radiative electron capture (REC) by 20-80 MeV Cl ions incident on C and Cu foils, 9: 11043 (J;US)
Interference effects in the quasimolecular K-radiation induced in collisions of hydrogenlike ions, 9: 10996 (RA;DE;In German)
Two accel/decel experiments: electron capture for 6 to 20 MeV S^{10-16+} on He and Ar and interference effects in MO K x-ray spectra for 5, 10, and 20 MeV Cl^{10+} on Ar, 9: 10989 (R;US)

CHLOROPLASTS
Fluorescence
Picosecond fluorescence kinetics in spinach chloroplasts at low temperature, 9: 10915 (J;GB)
Molecular Structure
Local structure of manganese in the photosynthetic apparatus and superoxide dismutase: an x-ray absorption study, 9: 10772 (R;US)

X-Ray Spectroscopy
Local structure of manganese in the photosynthetic apparatus and superoxide dismutase: an x-ray absorption study, 9: 10772 (R;US)

CHO CELLS
Hybridomas
Cytogenetic characterization of the CHO mutant EM9, 9: 10773 (R;US)
Mutants
Quantitative and molecular analyses of mutation in a pSV2gpt transformed CHO cell line, 9: 10843 (R;US)
Sister Chromatid Exchanges
Cytogenetic characterization of the CHO mutant EM9, 9: 10773 (R;US)

CHOLINE
Structural Chemical Analysis
Some nitrogen-14 NMR studies in solids, 9: 10350 (R;US)

CHONDROSARCOMAS
See SARCOMAS

CHROMATES
Specific compounds should be indexed by coordination of a descriptor of the form (CATION) COMPOUNDS and the above anion descriptor.
Electrochemistry
Electrochemical reduction of calcium chromate, 9: 10371 (J;US)
Reduction
Electrochemical reduction of calcium chromate, 9: 10371 (J;US)

CHROMATID DELETIONS
See CHROMOSOMAL ABERRATIONS

CHROMIUM
Activation Analysis
Chromium determination in gallium arsenide, 9: 10317 (RA;CS;In Czech)
Trace element analysis of biological materials: Complementarity of PIXE and NAA, 9: 10342 (J;US)
Emission Spectroscopy
Inductively coupled plasma-atomic emission spectrometry (ICP-AES) in support of nuclear waste management, 9: 10311 (R;US)
Metallurgical Effects
Chromium substitution/conservation in alloys for use in energy systems, 9: 10256 (J;US)
Nuclear Reaction Analysis
Determination of technologically important elements in nickel ores using radiative neutron capture, 9: 10321 (RA;CS;In Czech)
PIXE Analysis
Trace element analysis of biological materials: Complementarity of PIXE and NAA, 9: 10342 (J;US)
Superconductivity
Metallic interfaces and property modification, 9: 10220 (R;US)

CHROMIUM ALLOYS
See also ALLOY-RA-333
CHROMIUM STEELS
HASTELLOY X
HAYNES 188 ALLOY
HAYNES ALLOYS
HAYNES STELLITE 6B
INCOLOY ALLOYS
INCONEL ALLOYS
NICKEL-CHROMIUM STEELS
STAINLESS STEELS
Activation Analysis
Neutron activation analysis of resistance wires, 9: 10325 (RA;CS;In Czech)
Annealing
Intermetallic compound structure and phase transformations in zirconium based alloys during the annealing and under irradiation with the electron pulsed beam, 9: 10238 (RA;SU;In Russian)
Chemical Reaction Kinetics
Phase equilibria and kinetics in the solid state reaction between silicon and NiCrAl, 9: 10251 (J;US)
Corrosion
Microstructural study of failure mechanisms during mechanical testing in coal gasification environments. Final report Mar 1980-Mar 1982, 9: 9237 (R;US)
Creep
Evaluation of ferritic alloy Fe-2 1/4Cr-1Mo after neutron irradiation - irradiation creep and swelling, 9: 10230 (R;US)
Materials Testing
Microstructural study of failure mechanisms during mechanical testing in coal gasification environments. Final report Mar 1980-Mar 1982, 9: 9237 (R;US)
Mechanical Properties
Microstructural study of failure mechanisms during mechanical testing in coal gasification environments. Final report Mar 1980-Mar 1982, 9: 9237 (R;US)
Phase Diagrams
Phase equilibria and kinetics in the solid state reaction between silicon and NiCrAl, 9: 10251 (J;US)
Physical Radiation Effects
Evaluation of ferritic alloy Fe-2 1/4Cr-1Mo after neutron irradiation - irradiation creep and swelling, 9: 10230 (R;US)
Intermetallic compound structure and phase transformations in zirconium based alloys during the annealing and under irradiation with the electron pulsed beam, 9: 10238 (RA;SU;In Russian)
Swelling
Evaluation of ferritic alloy Fe-2 1/4Cr-1Mo after neutron irradiation - irradiation creep and swelling, 9: 10230 (R;US)

CHROMIUM FLUORIDES
Photoelectron Spectroscopy
X-ray-photoelectron final-state screening in transition-metal compounds, 9: 10301 (J;US)

CHROMIUM HYDRIDES
Ambipolar Diffusion
Diffusion behavior in titanium-chromium hydrides, 9: 10279 (J;GB)
Laves Phases
Diffusion behavior in titanium-chromium hydrides, 9: 10279 (J;GB)

CHROMIUM IONS
Emission Spectroscopy
Determination of Cr(VI) and Cr(III) by ICP, 9: 10335 (R;US)
Separation Processes
Determination of Cr(VI) and Cr(III) by ICP, 9: 10335 (R;US)

CHROMIUM STEELS
See also CHROMIUM-MOLYBDENUM STEELS
STAINLESS STEEL-446
Hardness
Effects of HFIR irradiation at 55°C on the microstructure and toughness of HT-9 and 9Cr-1Mo, 9: 10229 (R;US)
Microstructure
Effects of HFIR irradiation at 55°C on the microstructure and toughness of HT-9 and 9Cr-1Mo, 9: 10229 (R;US)

CHROMIUM-MOLYBDENUM STEELS
See also ALLOY-HT-9
Corrosion
Service behaviour of 1Kh2M steel in steam generator of BOR-60 reactor, 9: 10242 (R;SU;In Russian)
Creep
Effect of HTGR helium on fatigue and creep properties of 2 1/4Cr-1Mo steel, 9: 9798 (RA;US)
Long-term creep testing of 2 1/4 Cr-1 Mo steel in HTGR helium, 9: 9795 (RA;US)
Embrittlement
Toughness degradation of 2 1/4Cr-1Mo steel caused by isothermal ageing, stress ageing and neutron irradiation, 9: 9796 (RA;US)
Fatigue
Effect of HTGR helium on fatigue and creep properties of 2 1/4Cr-1Mo steel, 9: 9798 (RA;US)
Mechanical Properties
Influence of composition and thermomechanical treatment on EM 12 properties (Cr-9, Mo-2, V, Nb steel), 9: 10216 (R;FR)

CHROMODYNAMICS

COAL
See also SUBBITUMINOUS COAL
Collection, reduction, operation, maintenance and documentation of energy data for the petroleum industry. Final report, 9: 9337 (R;US)
Activation Analysis
Batch sulfurmeter installation and testing at the Paradise Coal Preparation Plant, 9: 9299 (R;US)
Laboratory and field acceptance performance of CONAC, 9: 9264 (R;US)
Calorific Value
Laboratory and field acceptance performance of CONAC, 9: 9264 (R;US)
Chemical Analysis
Coal analysis in New Zealand, 9: 9263 (R;NZ)
Chemical Properties
Coal research projects - North and South America, 9: 9219 (R;US)
Classification
Coal analysis in New Zealand, 9: 9263 (R;NZ)
Cleaning
Evaluation of the effect of coal cleaning on fugitive elements. Phase IV. Identification of mineral forms in coal. Quarterly progress report No. 2, September 1-November 30, 1983, 9: 9297 (R;US)
Combustion
Coal research projects - North and South America, 9: 9219 (R;US)
Coal slurries as alternate fuels for oil-designed boilers, 9: 10166 (BA;US)
Fuel staging for pulverized coal furnace NO/sub x/ control, 9: 9308 (BA;US)
Use of the pot furnace for the prediction of stoker performance, 9: 9312 (BA;US)
Vaporization and devolatilization of coal water sprays. Fifth quarterly report for the period ending November 11, 1983, 9: 9303 (R;US)
Combustion Products
Effects of coal and oil fly ash on sister chromatid exchange (SCE) in a macrophage like cell line, 9: 10923 (R;SE)
Health effects due to the emission of mercury on the combustion of coal, 9: 9319 (R;SE;In Swedish)
Mutagenicity tests of flue gas emissions from coal and oil fired plants. Investigation of the cells of Drosophila and mammals, 9: 9317 (R;SE;In Swedish)
Consumption Rates
Quarterly coal report, July-September 1983, 9: 9313 (R;US)
Desulfurization
Coal preparation practices in India, 9: 9301 (BA;US)
Evaluation of the effect of coal cleaning on fugitive elements. Phase IV. Identification of mineral forms in coal. Quarterly progress report No. 2, September 1-November 30, 1983, 9: 9297 (R;US)
Density
Data base for the analysis of compositional characteristics of coal seams and macerals. Technical progress report, August 1982-January 1983, 9: 9261 (R;US)
Desulfurization
Thermal decomposition of sulfite, bisulfite, and disulfite solutions, 9: 9274 (BA;US)
Devolatilization
Vaporization and devolatilization of coal water sprays. Fifth quarterly report for the period ending November 11, 1983, 9: 9303 (R;US)
Distribution
Coal distribution, January-September 1983, 9: 9314 (R;US)
Energy Models
Coal production forecasts in the 1978 ARC: an analysis of problem areas. Final report, 9: 9321 (R;US)
Use of the National Coal Model (NCM) in production goal analysis. Final report, 9: 9320 (R;US)
Environmental Effects
Coal research projects - North and South America, 9: 9219 (R;US)
Flotation
Flotation of coal using micro-bubbles and inorganic salts, 9: 9300 (BA;US)
Fluidized-Bed Combustion
UK developments in industrial coal firing, 9: 9311 (BA;US)
Fuel Substitution
Evolution of Canada's coal-liquid mixture program, 9: 9310 (BA;US)
Maritime Transport
Environmental risks of oil and coal transport at sea. A comparative study., 9: 9284 (R;SE;In Swedish)
Mechanical Properties
Coal research projects - North and South America, 9: 9219 (R;US)
Nuclear Reaction Analysis
Use of radiative neutron capture in determination of sulfur in coal, 9: 10320 (RA;CS;In Czech)
Particle Size
Vaporization and devolatilization of coal water sprays. Fifth quarterly report for the period ending November 11, 1983, 9: 9303 (R;US)
Petrology

Materials performance at high temperatures and pressures in simulated coal gasification atmospheres, 9: 9245 (BA;US)

COAL GASIFICATION PLANTS
Computerized Simulation
Great Plains ASPEN model development. Technical progress report, November 1-30, 1983, 9: 9225 (R;US)
Great Plains ASPEN model development. Technical progress report, October 1, 1983-October 31, 1983, 9: 9226 (R;US)
Corrosion
Erosion-corrosion of structural materials in a simulated coal gasification environment, 9: 9244 (BA;US)
Materials performance in coal gasification environments, 9: 9246 (BA;US)
Microstructural study of failure mechanisms during mechanical testing in coal gasification environments. Final report Mar 1980-Mar 1982, 9: 9237 (R;US)
Properties and performance of candidate structural metals for the production of synthetic gas from coal, 9: 9248 (BA;US)
Data Acquisition Systems
Great Plains ASPEN model development. Technical progress report, November 1-30, 1983, 9: 9225 (R;US)
Great Plains ASPEN model development. Technical progress report, October 1, 1983-October 31, 1983, 9: 9226 (R;US)
Environmental Impacts
Great Plains Gasification Associates Facility, North Dakota: recommendations for a supplemental environmental program. Final report of the Ecological and Environmental Effects Subcommittee, 9: 9988 (R;US)
Status report: solid waste management, 9: 9316 (R;US)
Materials Testing
Erosion-corrosion of structural materials in a simulated coal gasification environment, 9: 9244 (BA;US)
Materials performance in coal gasification environments, 9: 9246 (BA;US)
Properties and performance of candidate structural metals for the production of synthetic gas from coal, 9: 9248 (BA;US)
Mechanical Properties
Microstructural study of failure mechanisms during mechanical testing in coal gasification environments. Final report Mar 1980-Mar 1982, 9: 9237 (R;US)
On-Line Measurement Systems
Differential optical absorption techniques for diagnostics of coal gasification. Technical progress report, October, November, December 1982, 9: 9260 (R;US)
Pressure Vessels
Evaluation of acoustic emission weld monitoring for coal gasification vessels. Final report, September 1979-March 1982, 9: 9222 (R;US)
Process Solutions
Differential optical absorption techniques for diagnostics of coal gasification. Technical progress report, October, November, December 1982, 9: 9260 (R;US)
Solid Wastes
Status report: solid waste management, 9: 9316 (R;US)

COAL INDUSTRY
Financial Data

H-COAL PROCESS
SRC-II PROCESS
TSL PROCESS
Catalysts
Catalytic coal liquefaction. Quarterly report, October-December 1983, 9: 9227 (R;US)
Chemical Reactors
Application of optical and electron microscopy to coal conversion systems, 9: 9258 (BA;US)
Study of multiphase flow useful to understanding scaleup of coal liquefaction reactors. Technical progress report, September 1-November 30, 1983, 9: 9229 (R;US)
Mathematical Models
Coal liquefaction model studies: free radical chain decomposition of diphenylpropane, dibenzyl ether, and phenyl ether via β-scission reactions, 9: 9259 (J;US)
Pilot Plants
Corrosion of metals in coal liquefaction processes. Final report, 9: 9223 (R;US)
Research Programs
Coal research projects - North and South America, 9: 9219 (R;US)
COAL LIQUEFACTION PLANTS
Centrifugal Pumps
Coal slurry pump development. Fossil energy annual summary technical information report, 9: 9224 (R;US)
Corrosion
Corrosion of metals in coal liquefaction processes. Final report, 9: 9223 (R;US)
Environmental Impacts
Short- and long-term leaching of solid wastes from the H-coal coal liquefaction process, 9: 9281 (R;US)
Status report: solid waste management, 9: 9316 (R;US)
Solid Wastes
Status report: solid waste management, 9: 9316 (R;US)
COAL LIQUIDS
Adsorption
Thermodynamic behavior of coal liquids in the presence of coal solids characterization of IOM and ash. First quarterly progress report, August 1-November 1, 1983 (Effect of ash and pyridine insoluble organic matter on vapor pressure of coal liquids as a function of temperature), 9: 9234 (R;US)
Coking
Application of optical and electron microscopy to coal conversion systems, 9: 9258 (BA;US)
Comparative Evaluations
Acute, chronic and reproductive effects of petroleum and two petroleum substitutes on the large milkweed bug, Oncopeltus fasciatus, 9: 10933 (R;US)
Enthalpy
Enthalpy measurement of coal-derived liquids. Final report, April 1981-September 1983, 9: 9228 (R;US)
Equations of State
Enthalpy measurement of coal-derived liquids. Final report, April 1981-September 1983, 9: 9228 (R;US)
Fractionation
Chemical and biological effects of heavy distillate recycle in the SRC-II process, 9: 9238 (R;US)
Hydrogenation
New catalysts for coal liquid upgrading. Quarterly report, September 1-November 30, 1983, 9: 9230 (R;US)
Novel catalytic methods for heteroatom removal in coal liquids upgrading. Quarterly report No. 1, September 1-December 1, 1983, 9: 9233 (R;US)
Lethal Doses
Acute, chronic and reproductive effects of petroleum and two petroleum substitutes on the large milkweed bug, Oncopeltus fasciatus, 9: 10933 (R;US)
Recycling
Chemical and biological effects of heavy distillate recycle in the SRC-II process, 9: 9238 (R;US)
Survival Time
Acute, chronic and reproductive effects of petroleum and two petroleum substitutes on the large milkweed bug, Oncopeltus fasciatus, 9: 10933 (R;US)
Thermodynamic Properties
Enthalpy measurement of coal-derived liquids. Final report, April 1981-September 1983, 9: 9228 (R;US)
Liquid fossil fuel technology. Quarterly technical progress rport, April-June 1983, 9: 9324 (R;US)
Thermodynamic behavior of coal liquids in the presence of coal solids characterization of IOM and ash. First quarterly progress report, August 1-November 1, 1983 (Effect of ash and pyridine insoluble organic matter on vapor pressure of coal liquids as a function of temperature), 9: 9234 (R;US)
Toxicity
Acute, chronic and reproductive effects of petroleum and two petroleum substitutes on the large milkweed bug, Oncopeltus fasciatus, 9: 10933 (R;US)
Yields
Chemical and biological effects of heavy distillate recycle in the SRC-II process, 9: 9238 (R;US)
COAL MINES
Mine Cars
Possibilities to transport shield-type support with a trackless device during installing of props in the German bituminous coal mining, 9: 9292 (R;DE;In German)
Powered Supports
Possibilities to transport shield-type support with a trackless device during installing of props in the German bituminous coal mining, 9: 9292 (R;DE;In German)
COAL MINING
Accidents
Coal research projects - North and South America, 9: 9219 (R;US)
Air Pollution
Acid rain: the need to speak out, 9: 9288 (BA;US)
Environmental Impacts
Acid rain: the need to speak out, 9: 9288 (BA;US)
Legislation
Acid rain: the need to speak out, 9: 9288 (BA;US)
Research Programs
Coal research projects - North and South America, 9: 9219 (R;US)
Socio-Economic Factors
Illinois land report: Rice Lake Conservation Area. Volume 1. Final document, 9: 9286 (R;US)
COAL PREPARATION
Flotation of coal using micro-bubbles and inorganic salts, 9: 9300 (BA;US)
Flotation
Cleaning of coal by flotation, 9: 9298 (R;SE;In Swedish)
Research Programs
Coal research projects - North and South America, 9: 9219 (R;US)
Technology Assessment
Coal preparation practices in India, 9: 9301 (BA;US)
COAL PREPARATION PLANTS
On-Line Measurement Systems
Batch sulfurmeter installation and testing at the Paradise Coal Preparation Plant, 9: 9299 (R;US)
COAL SEAMS
Chemical Composition
Data base for the analysis of compositional characteristics of coal seams and macerals. Technical progress report, August 1982-January 1983 (Rocky Mountain and Northern Great Plains provinces), 9: 9261 (R;US)
Information Systems
Data base for the analysis of compositional characteristics of coal seams and macerals. Technical progress report, August 1982-January 1983 (Rocky Mountain and Northern Great Plains provinces), 9: 9261 (R;US)
Sampling
Data base for the analysis of compositional characteristics of coal seams and macerals. Technical progress report, August 1982-January 1983 (Rocky Mountain and Northern Great Plains provinces), 9: 9261 (R;US)

Variations
Data base for the analysis of compositional characteristics of coal seams and macerals. Technical progress report, August 1982-January 1983 (Rocky Mountain and Northern Great Plains provinces), 9: 9261 (R;US)

COAL-DERIVED LIQUIDS
See COAL LIQUIDS

COAL-FIRED MHD GENERATORS
See also MHD GENERATOR CFFF
Gaseous Wastes
MHD heat and seed recovery technology project. Annual progress report, October 1981-September 1982, 9: 10046 (R;US)
Heat Recovery
MHD heat and seed recovery technology project. Annual progress report, October 1981-September 1982, 9: 10046 (R;US)
Seed Recovery
MHD heat and seed recovery technology project. Annual progress report, October 1981-September 1982, 9: 10046 (R;US)

COAL-OIL MIXTURES
See COAL
FUEL OILS
FUEL SLURRIES

COASTAL WATERS
Chemical Composition
Quantitative electron spin resonance (ESR) determinations of forms and total amounts of Mn in aqueous environmental samples, 9: 10747 (J;GB)
Water Currents
Near-surface measurements of quasi-Lagrangian velocities in open water, 9: 10973 (J;US)

COATED FUEL PARTICLES
Fabrication
Utilization of particle fuels in different reactor concepts. Survey of world experience, 9: 9846 (R;XA)
Feasibility Studies
Utilization of particle fuels in different reactor concepts. Survey of world experience, 9: 9846 (R;XA)
Fission Products
Fission product retention in HTGR fuels, 9: 9849 (RA;US)
Production
Raman spectral characterization of silicon carbide nuclear fuel coatings, 9: 10277 (J;US)

COATING PROCESSES
See SURFACE COATING

COATING (SURFACE)
See SURFACE COATING

COATINGS
Mechanical Engineering Research Program. Quarterly progress report, April-June 1983, 9: 10441 (R;US)
Drag
Numerical simulations of compliant material response to turbulent flow, 9: 10431 (R;US)

COBALT
Activation Analysis
Semiconductor nuclear emission detector using at gamma activation analysis of the environmental objects, 9: 10597 (RA;SU;In Russian)
Trace element analysis of biological materials: Complementarity of PIXE and NAA, 9: 10342 (J;US)
Biological Effects
Effects of metal compounds on chromosome length, 9: 10924 (R;SE)
Catalytic Effects
Metal boride catalysts for indirect liquefaction. Quarterly technical progress report, September 1-November 30, 1983, 9: 9536 (R;US)
Crystal Models
Calculation of the magnetic states of cobalt overlayers on copper (111), 9: 10250 (J;US)
Magnetic Properties
Calculation of the magnetic states of cobalt overlayers on copper (111), 9: 10250 (J;US)
PIXE Analysis
Trace element analysis of biological materials: Complementarity of PIXE and NAA, 9: 10342 (J;US)
Radioecological Concentration
Standards for concentrations of radionuclides in soil: basis and implementation, 9: 11154 (RA;US)
Thin Films
Calculation of the magnetic states of cobalt overlayers on copper (111), 9: 10250 (J;US)

COBALT BASE ALLOYS
See also HAYNES STELLITE 6B
Chemical Composition
Performance of test materials in Westinghouse PDU fluid bed gasifier (6B, 188, N155, Alloy X, 26-1, 18SR, 825, 671, 800, 810 and 329; pack-aluminized type 310(Al) and 800(Al)), 9: 9247 (BA;US)
Corrosion
Performance of test materials in Westinghouse PDU fluid bed gasifier (6B, 188, N155, Alloy X, 26-1, 18SR, 825, 671, 800, 810 and 329; pack-aluminized type 310(Al) and 800(Al)), 9: 9247 (BA;US)

COBALT BORIDES
Chemical Composition
Metal boride catalysts for indirect liquefaction. Quarterly technical progress report, September 1-November 30, 1983, 9: 9536 (R;US)

COBALT COMPLEXES
Geochemistry
Temporal stability of chelated Co and Zn in reducing geochemical environments, 9: 9513 (J;US)
Stability
Temporal stability of chelated Co and Zn in reducing geochemical environments, 9: 9513 (J;US)

COBALT FLUORIDES
Photoelectron Spectroscopy
X-ray-photoelectron final-state screening in transition-metal compounds, 9: 10301 (J;US)

COGENERATION
Prior to November 1980, this concept was indexed to CO-GENERATION.
See COGENERATION
Cogeneration systems reliability data base feasibility study. Final report Aug 1982-May 1983, 9: 10016 (R;US)
Computerized Simulation
Optimal cogeneration systems for high-rise office buildings, 9: 10086 (J;US)
Evaluation
Residential and commercial cogeneration systems assessment. Final report Mar 1982-Jun 1983, 9: 10149 (R;US)

COILS (MAGNETIC)
See MAGNET COILS

COKE
See also COKE BREEZE
Uses
Applications of petroleum coke, 9: 9331 (R;DE;In German)

COKE BREEZE
Corrosive Effects
Erosion-corrosion of structural materials in a simulated coal gasification environment, 9: 9244 (BA;US)

COKE OVENS
Heat Transfer
Mathematical model of the heating of coke ovens, 9: 9236 (R;DE;In German)
Mathematical Models
Mathematical model of the heating of coke ovens, 9: 9236 (R;DE;In German)

COLLIDING BEAMS
Experiment Planning
Technology of high luminosity detectors, 9: 10610 (R;US)
Radiation Detectors
Technology of high luminosity detectors, 9: 10610 (R;US)

COLLIERIES
See COAL MINES

COLLOIDS
See also FOAMS
Production
Two dimensional colloidal systems. Technical progress report, 9: 10199 (R;US)

COLOGNE SPIRITS
See ETHANOL
COLOMBIA
Power Systems
Perceived risk of nuclear and hydro electrical power generation in Colombia. Final report for the period 1 July 1980-31 January 1983, 9: 9969 (R;XA)
COLOR MODEL
Postulated Particles
Approach towards minimality - supersymmetry at the preonic or pre-preonic level, 9: 11085 (R;XA)
COLORADO
Air Pollution
Regional air quality in the Four Corners Study Region: modeling approach, 9: 10674 (BA;US)
Natural Gas Deposits
The Department of Energy's western gas sands project multiwell experiment update, 9: 9381 (J;US)
Natural Gas Wells
The Mancos Formation: an evaluation of the interaction of geological conditions, treatment characteristics and production, 9: 9377 (J;US)
COLORIMETRIC DOSEMETERS
Image Processing
Accelerated color development of irradiated radiochromic dye films, 9: 10623 (J;US)
COLUMBIUM
See NIOBIUM
COMBINED STEAM-POWER GENERATION
See COGENERATION
COMBUSTION
Laser Spectroscopy
Applications of laser techniques for combustion studies, 9: 10392 (R;SE)
Simulation
Experiments on pulverized coal combustion under conditions simulating a blast furnace environment, 9: 9309 (BA;US)
COMBUSTION CHAMBERS
Construction
Method of burning residual fuel oil in distillate fuel oil burners. Summary report, 9: 10135 (R;US)
Design
Combustion of refuse derived fuel in suspension, 9: 10464 (R;US)
Method of burning residual fuel oil in distillate fuel oil burners. Summary report, 9: 10135 (R;US)
Testing
Combustion of refuse derived fuel in suspension, 9: 10464 (R;US)
COMBUSTION PRODUCTS
Activation Analysis
Use of INAA in monitoring losses of trace elements during ashing of biological materials, 9: 10323 (RA;CS;In Czech)
Chemical Composition
Evaluation of NO/sub x/ emissions on a pilot-scale furnace, 9: 9413 (R;US)
Combustion
Use of INAA in monitoring losses of trace elements during ashing of biological materials, 9: 10323 (RA;CS;In Czech)
COMBUSTORS
See also FLUIDIZED-BED COMBUSTORS
Fuel Substitution
An overview of research requirements for stationary combustion systems, 9: 10153 (J;US)
Heat Losses
Development and application of energy-saving O_2 control system with variable voltage frequency inverter (VVVF) for forced draft fan (FDF), 9: 10156 (BA;US)
COMETS
Magnetosheath
Solar wind stagnation near comets, 9: 10977 (R;HU)
Orbits
Halley's Comet: AD 1986 to 2647 BC (Halley's Comet), 9: 10982 (J;GB)
COMMERCIAL BUILDINGS
See also HOTELS
RESTAURANTS
Daylighting
Evaluation of the daylight and energy performance of windows, skylights, and clerestories, 9: 10074 (R;US)
Energy Conservation
Building energy use compilation and analysis (BECA). Part C: conservation progress in retrofitted commercial buildings, 9: 10090 (J;CH)
Energy efficiency and conservation in buildings: the use of indicators, 9: 10023 (J;GB)
Model industry initiated energy conservation program. Final report, 9: 10174 (R;US)
Energy Consumption
BEPS equivalency study. Final report, 9: 10018 (R;US)
Energy Efficiency
BEPS equivalency study. Final report, 9: 10018 (R;US)
Commercial energy conservation and electrical load management case study, 9: 10115 (J;US)
Energy efficiency and conservation in buildings: the use of indicators, 9: 10023 (J;GB)
Engineering
Retrofit photovoltaic systems for intermediate sized applications-A design and market study, 9: 9670 (J;US)
Load Management
Commercial energy conservation and electrical load management case study, 9: 10115 (J;US)
Modifications
Retrofit photovoltaic systems for intermediate sized applications-A design and market study, 9: 9670 (J;US)
Passive Solar Heating Systems
Passive solar commercial buildings project. Project status report, November 1-December 31, 1983, 9: 9698 (R;US)
Photovoltaic Power Supplies
Design and construction of a hybrid photovoltaic (3KW /SUB p/) -thermal solar energy system for a residential/commercial building, 9: 9667 (J;US)
Retrofit photovoltaic systems for intermediate sized applications-A design and market study, 9: 9670 (J;US)
Power Systems
Design and construction of a hybrid photovoltaic (3KW /SUB p/) -thermal solar energy system for a residential/commercial building, 9: 9667 (J;US)
Refrigerators
Design and laboratory testing of an unequal parallel multicompressor supermarket refrigeration system, 9: 10124 (J;US)
Retrofitting
Building energy use compilation and analysis (BECA). Part C: conservation progress in retrofitted commercial buildings, 9: 10090 (J;CH)
Solar Architecture
Retrofit photovoltaic systems for intermediate sized applications-A design and market study, 9: 9670 (J;US)
Solar Heating Systems
Design and construction of a hybrid photovoltaic (3KW /SUB p/) -thermal solar energy system for a residential/commercial building, 9: 9667 (J;US)
COMMERCIAL SECTOR
Energy Conservation
Renewable energy resource planning in Orange County: a summary of procedures used for renewable assessment. Piedmont Cresent Energy Project, 9: 10044 (R;US)
Space Heating
Survey of alternative fuels for residential and commercial space heating. Final report, 9: 10061 (R;US)
COMPLEX TERRAIN
Microwave Radiation
Physical modeling of EM propagation over nonhomogeneous terrain, 9: 10456 (R;US)
COMPOSITE MATERIALS
See also SUPERCONDUCTING COMPOSITES
Mechanical Engineering Research Program. Quarterly progress report, April-June 1983, 9: 10441 (R;US)
Whiskers
Development of the VLS process for SiC whisker growth, 9: 10271 (R;US)

COMPOUND-NUCLEUS REACTIONS
Neutron Emission
Code ALICE B and B: a precompound/evaporation fission code emphasizing neutron yields, 9: 11143 (R;US)
Weisskopf Model
Code ALICE B and B: a precompound/evaporation fission code emphasizing neutron yields, 9: 11143 (R;US)
COMPOUNDS (ORGANIC)
See ORGANIC COMPOUNDS
COMPRESSED AIR ENERGY STORAGE
Feasibility Studies
Initial operation of the compressed air experiment at Pittsfield, Illinois, 9: 9944 (J;US)
Testing
Initial operation of the compressed air experiment at Pittsfield, Illinois, 9: 9944 (J;US)
COMPRESSORS
See also GAS COMPRESSORS
Energy Conservation
Field testing energy-saving hermetic compressors in residential refrigerators, 9: 10119 (J;US)
Field Tests
Field testing energy-saving hermetic compressors in residential refrigerators, 9: 10119 (J;US)
Thermal Efficiency
Field testing energy-saving hermetic compressors in residential refrigerators, 9: 10119 (J;US)
COMPTON SPECTROMETERS
Li-Drifted Detectors
Anticompton γ-spectrometer based on Ge(Li)-detector of special design, 9: 10598 (RA;SU;In Russian)
Plastic Scintillation Detectors
Anticompton γ-spectrometer based on Ge(Li)-detector of special design, 9: 10598 (RA;SU;In Russian)
COMPUTED TOMOGRAPHY
See COMPUTERIZED TOMOGRAPHY
COMPUTER AXIAL TOMOGRAPHY SCANNING
See CAT SCANNING
COMPUTER CODES
Computer codes are indexed by their initial letter and CODES, e.g., A CODES. If the code name begins with a number the code is indexed to NUMBER CODES.
See also C CODES
T CODES
A Codes
Code ALICE B and B: a precompound/evaporation fission code emphasizing neutron yields, 9: 11143 (R;US)
C Codes
Development and qualification of the LOCA analysis system CUPIDON-DEMETER, 9: 9877 (R;FR)
Catalogs
Microcomputer methods for solar design and analysis: passive and active systems, 9: 9582 (R;US)
Comparative Evaluations
Thermal load and computer simulation run-time comparisons using a research version of DOE-2, 9: 9974 (J;US)
D Codes
Development and qualification of the LOCA analysis system CUPIDON-DEMETER, 9: 9877 (R;FR)
DIGLIB for HP-1000 computers, 9: 11391 (R;US)
Thermal load and computer simulation run-time comparisons using a research version of DOE-2, 9: 9974 (J;US)
Design
A user oriented design system for Stirling cycle codes, 9: 10475 (J;US)
F Codes
Analysis of recent fuel disruption experiments, 9: 9934 (BA;FR)
G Codes
Summary of computational support and general documentation for computer code (GENTREE) used in Office of Nuclear Waste Isolation Pilot Salt Site Selection Project, 9: 9492 (R;US)
H Codes
Precision of solar collector testing and selection of instruments of measurement, 9: 9725 (R;US)
I Codes
Experiment in benchmarking database systems, 9: 11396 (R;US)
L Codes
Implementation of MACLISP on a large address space computer. Final report (New implementation of LISP), 9: 11369 (R;US)
Modeling of lithium and lithium-lead reactions in air using LITFIRE, 9: 11325 (R;US)
NIL notes for release 0.259 (New Implementation of LISP), 9: 11372 (R;US)
M Codes
Gas filled dynamics for laser driven fusion reactors. Final report, August 4, 1981-December 31, 1983, 9: 11282 (R;US)
N Codes
Introduction to NIL, 9: 11373 (R;US)
NIL notes for release 0.259 (New Implementation of LISP), 9: 11372 (R;US)
O Codes
ORIGEN2: A versatile computer code for calculating the nuclide compositions and characteristics of nuclear materials, 9: 9829 (J;US)
P Codes
PHYSURA code - objectives, description, validation (Cabin experiments), 9: 9878 (R;FR;In French)
R Codes
Methods of RECORD, an LWR fuel assembly burnup code, 9: 9847 (R;NO)
Program for parameter studies of steam generators, 9: 9840 (R;SE;In Swedish)
S Codes
Stirling analysis code validation using free-piston engine base line data (SEAMI code), 9: 10188 (J;US)
COMPUTER GRAPHICS
Computer Codes
DIGLIB for HP-1000 computers, 9: 11391 (R;US)
Interactive Display Devices
Cray/VAX interactive graphics system, 9: 11383 (R;US)
Manuals
Cyber Visual System (CVS) reference manual, 9: 11374 (R;US)
COMPUTER LANGUAGES
See PROGRAMMING LANGUAGES
COMPUTER NETWORKS
Design
Interactive parallel processor for data analysis, 9: 10608 (R;US)
COMPUTER PROGRAMMING
See PROGRAMMING
COMPUTER PROGRAMS
See COMPUTER CODES
COMPUTER-AIDED DESIGN
Mechanical Engineering Research Program. Quarterly progress report, April-June 1983, 9: 10441 (R;US)
Performance
Operation of a computer aided drafting system: improvements, results and hopes, 9: 11385 (R;US)
COMPUTERIZED CONTROL SYSTEMS
Design
Introduction of fault tolerance into digitally controlled gas regulators, 9: 9386 (BA;US)
COMPUTERIZED TOMOGRAPHY
An imaging technique in which transmission measurements of a narrow beam of rays, photons, or particles made at several different angles around an object may be used with a computer program to obtain a clear image of one plane
See also CAT SCANNING
Accuracy
Image levels and accuracy in computed tomography, 9: 10812 (J;US)
Display Devices
The state-of-the-art in medical computed tomography, 9: 10813 (J;US)
Image Processing
Bayesian approach to limited-angle reconstruction in computed tomography, 9: 11179 (J;US)
Image levels and accuracy in computed tomography, 9: 10812 (J;US)
Image Scanners
High repetition rate volumetric x-ray CT scanning, 9: 10814 (J;US)

COMPUTERS
See also CRAY COMPUTERS
DEC COMPUTERS
DENELCOR COMPUTERS
HP COMPUTERS
Equipment Interfaces
Architecture for a user interface management system, 9: 11387 (R;US)
Human Factors Engineering
Variable user interface construction techniques, 9: 11386 (R;US)
Programming Languages
Architecture for a user interface management system, 9: 11387 (R;US)
CONCENTRATOR SOLAR CELLS
Prior to July, 1979 SOLAR CELLS or specific solar cells descriptors and SOLAR CONCENTRATORS were used to index this concept.
Efficiency
Some advanced testing techniques for concentrator photovoltaic cells and lenses, 9: 9641 (J;US)
Modular Structures
Sandia concentrator array testing experiences, 9: 9648 (J;US)
Performance Testing
Sandia concentrator array testing experiences, 9: 9648 (J;US)
Photovoltaic Conversion
Some advanced testing techniques for concentrator photovoltaic cells and lenses, 9: 9641 (J;US)
Quantum Efficiency
Sandia concentrator array testing experiences, 9: 9648 (J;US)
Supports
Some advanced testing techniques for concentrator photovoltaic cells and lenses, 9: 9641 (J;US)
Testing
Some advanced testing techniques for concentrator photovoltaic cells and lenses, 9: 9641 (J;US)
CONCRETES
Energy Conservation
Possible contributions of cement and concrete technology to energy conservation, 9: 10141 (R;US)
Heat Transfer
Heat transfer characteristics of a low density concrete wall. Final report, 9: 10073 (R;US)
Technology Assessment
Possible contributions of cement and concrete technology to energy conservation, 9: 10141 (R;US)
Thermodynamic Properties
Heat transfer characteristics of a low density concrete wall. Final report, 9: 10073 (R;US)
CONDENSATES
Chemical Composition
Corrosion in H.E.-boilers and analysis of flue gas condensate, 9: 10466 (BA;US)
Corrosive Effects
Corrosion in H.E.-boilers and analysis of flue gas condensate, 9: 10466 (BA;US)
PH Value
Corrosion in H.E.-boilers and analysis of flue gas condensate, 9: 10466 (BA;US)
CONGENITAL DISEASES
Epidemiology
Epidemiologic aspects of neural tube defects in the United States: changing concepts and their importance for screening and prenatal diagnostic programs, 9: 10828 (R;US)
CONGLOMERATES
Limited to geological formations.
Stratigraphy
Basal conglomerates and weathered zones in the Marquette Range Supergroup, Northern Peninsula of Michigan - Age, indications of atmospheric oxygen, and uranium potential, 9: 10958 (RA;US)
CONNECTICUT
Energy Policy
State of Connecticut middle distillate monitoring program. Report for July 1982-June 1983, 9: 9336 (R;US)
CONNECTORS
Design
Design solutions for the solar cell interconnect fatigue fracture problem, 9: 9649 (J;US)
Failure Mode Analysis
Design solutions for the solar cell interconnect fatigue fracture problem, 9: 9649 (J;US)
Fatigue
Design solutions for the solar cell interconnect fatigue fracture problem, 9: 9649 (J;US)
Materials Testing
Design solutions for the solar cell interconnect fatigue fracture problem, 9: 9649 (J;US)
CONOCO PROCESS
Materials Testing
Critical study of materials for synthetic gas quench systems, 9: 9243 (BA;US)
CONSERVATION (ENERGY)
See ENERGY CONSERVATION
CONSERVATION (RESOURCE)
See RESOURCE CONSERVATION
CONTACT RADIOTHERAPY
See RADIOTHERAPY
CONTAINERS
See also CASKS
HOPPERS
PRESSURE VESSELS
TANKS
Corrosion
Long-term performance of materials used for high-level waste packaging. Second quarterly report, year two, July 1983-September 1983. Volume 2, 9: 9484 (R;US)
Design
Transportation packaging for processed transuranic waste, 9: 9454 (J;US)
CONTAINMENT BUILDINGS
Construction
Quality assurance in civil works for nuclear power plants - status report on behalf of the Federal Minister of the Interior. Final report 1982, 9: 9891 (R;DE;In German)
Situation of quality assurance for safety related buildings of nuclear power stations. Status report on behalf of the Federal Minister of the Interior. Final report 1982, 9: 9892 (R;DE;In German)
Quality Assurance
Quality assurance in civil works for nuclear power plants - status report on behalf of the Federal Minister of the Interior. Final report 1982, 9: 9891 (R;DE;In German)
Situation of quality assurance for safety related buildings of nuclear power stations. Status report on behalf of the Federal Minister of the Interior. Final report 1982, 9: 9892 (R;DE;In German)
Stress Analysis
Containment features for the 1000MWe LMFBR large developmental plant, 9: 9933 (BA;FR)
CONTAINMENT SYSTEMS
Performance
Suppression pool modeling (BWR), 9: 9912 (R;US)
Pressure Suppression
Suppression pool modeling (BWR), 9: 9912 (R;US)
CONTAMINATION (INTERNAL)
See RADIONUCLIDE KINETICS
CONTAMINATION (SURFACE)
See SURFACE CONTAMINATION
CONTINENTAL SHELF
Exploitation
Gulf of Mexico summary report (Contains glossary), 9: 9327 (R;US)
Exploration
Gulf of Mexico summary report (Contains glossary), 9: 9327 (R;US)
Natural Gas Deposits
Modeling the number of bids received for outer continental shelf leases by Poisson-type models, 9: 9340 (J;US)
Petroleum Deposits
Modeling the number of bids received for outer continental shelf leases by Poisson-type models, 9: 9340 (J;US)

Sediments
Polycyclic aromatic hydrocarbon (PAH)-phase associations in Washington coastal sediment, 9: 10745 (J;GB)

CONTROL ELEMENTS
Mechanical Vibrations
Stochastic aspects of two-dimensional vibration diagnostics, 9: 9856 (R;HU)
Reactivity Worths
Control absorber rod in Phenix. Comparison of calculated and measured worths, 9: 9853 (R;FR)
Stress Analysis
Thermal and stress analysis of control rod, 9: 9857 (RA;US)
Thermal Analysis
Thermal and stress analysis of control rod, 9: 9857 (RA;US)
Three-Dimensional Calculations
Group collapsing strategy for 3D design calculations, 9: 9816 (R;FR)

CONTROL (RADIOACTIVITY)
See RADIATION MONITORING

CONTROL RODS
See CONTROL ELEMENTS

CONTROL THEORY
Necessary and sufficient conditions of the optimality for hyperbolic systems with non-differentiable performance functional, 9: 11381 (R;XA)
Vector-valued measure and the necessary conditions for the optimal control problems of linear systems, 9: 11375 (R;XA)
Differential Equations
Numerical and theoretical investigations into a continuation approach to decentralized control, 9: 11371 (R;US)
Eigenvalues
Numerical and theoretical investigations into a continuation approach to decentralized control, 9: 11371 (R;US)
Optimization
Optimal control of distributed parameter system with incomplete information about the initial condition, 9: 11376 (R;XA)

CONTROL THEORY (REACTOR)
See REACTOR KINETICS

CONVECTIVE LOOP HOUSES
See DOUBLE ENVELOPE BUILDINGS

CONVERTERS (ANALOG-DIGITAL)
See ANALOG-TO-DIGITAL CONVERTERS

CONVEYORS
See also BELT CONVEYORS
Design
UK developments in industrial coal firing, 9: 9311 (BA;US)

COOKING
See FOOD PROCESSING

COOLERS
See HEAT EXCHANGERS

COOLING SYSTEMS
See also THERMONUCLEAR REACTOR COOLING SYSTEMS
Development of a large lithium coolant system for operation under vacuum, 9: 11294 (R;US)
Antifoulants
The effect of temperature on the dissipation of chlorine in seawater, 9: 10732 (BA;US)
Desiccants
Analysis of advanced desiccant cooling systems, 9: 10105 (BA;US)
Design
Design of the coolant system for the Large Coil Test Facility pulse coils, 9: 11274 (R;US)
Water Pollution
Review of the impact of copper released into freshwater environments, 9: 10742 (R;US)

COPPER
Activation Analysis
Semiconductor nuclear emission detector using at gamma activation analysis of the environmental objects, 9: 10597 (RA;SU;In Russian)
Simultaneous determination of Cd, Cu, Mo, Zn in biological samples using neutron activation analysis combined with radiochemical separation, 9: 10322 (RA;CS;In Czech)
Trace element analysis of biological materials: Complementarity of PIXE and NAA, 9: 10342 (J;US)
Biological Accumulation
Concentrations of copper-binding proteins in livers of bluegills exposed to increased concentrations of soluble copper, 9: 10931 (R;US)
Review of the impact of copper released into freshwater environments, 9: 10742 (R;US)
Chemical Reactions
An algal assay method for determination of copper complexation capacities of natural waters, 9: 10936 (J;US)
Critical Field
Anisotropic critical fields in superconducting superlattices, 9: 10248 (J;US)
Decontamination
Decontamination of transuranic contaminated metals by melt refining, 9: 9500 (J;US)
Ecological Concentration
Concentration of heavy metals in water plants of some Austrian running waters, 9: 10932 (R;AT;In German.)
Inner-Shell Ionization
K-shell ionization by low-velocity ions, 9: 11024 (J;US)
K-shell ionization cross section for Ti, Fe, Cu, Zr, and Ag, 9: 11033 (J;US)
Ion-Atom Collisions
Cross section for radiative electron capture (REC) by 20-80 MeV Cl ions incident on C and Cu foils, 9: 11043 (J;US)
Fundamental aspects of laser and ion-beam interactions with solid surfaces, 9: 11002 (R;NL)
K-shell ionization by low-velocity ions, 9: 11024 (J;US)
K-shell ionization cross section for Ti, Fe, Cu, Zr, and Ag, 9: 11033 (J;US)
Magnetoresistance
Fusion neutron effects on magnetoresistivity of copper stabilizer materials, 9: 10222 (RA;US)
Materials Testing
Design solutions for the solar cell interconnect fatigue fracture problem, 9: 9649 (J;US)
Physical Radiation Effects
Fusion neutron effects on magnetoresistivity of copper stabilizer materials, 9: 10222 (RA;US)
PIXE Analysis
Large scale study of tooth enamel, 9: 10343 (J;US)
Trace element analysis of biological materials: Complementarity of PIXE and NAA, 9: 10342 (J;US)
Precipitation
Raffinate treatment at the Portsmouth Gaseous Diffusion Plant, 9: 9461 (RA;US)
Production
Energy savings by recovered materials use in the copper industry , 9: 10139 (R;US)
Quantitative Chemical Analysis
Partitioning of copper among copper-binding proteins in the mussel Mytilus edulis exposed to soluble copper, 9: 10935 (R;US)
Superconductivity
Anisotropic critical fields in superconducting superlattices, 9: 10248 (J;US)
Tissue Distribution
Concentrations of copper-binding proteins in livers of bluegills exposed to increased concentrations of soluble copper, 9: 10931 (R;US)
Toxicity
Concentrations of copper-binding proteins in livers of bluegills exposed to increased concentrations of soluble copper, 9: 10931 (R;US)
Review of the impact of copper released into freshwater environments, 9: 10742 (R;US)
Water Chemistry
An algal assay method for determination of copper complexation capacities of natural waters, 9: 10936 (J;US)

COPPER BASE ALLOYS
Comparative Evaluations
Properties and performance of candidate structural metals for the production of synthetic gas from coal, 9: 9248 (BA;US)
Corrosion
Properties and performance of candidate structural metals for the production of synthetic gas from coal, 9: 9248 (BA;US)

Erosion
Properties and performance of candidate structural metals for the production of synthetic gas from coal, 9: 9248 (BA;US)
COPPER COMPLEXES
Raman Spectra
Molecular complexes of copper uroporphyrin with aromatic acceptors, 9: 10369 (J;US)
COPPER FLUORIDES
Photoelectron Spectroscopy
X-ray-photoelectron final-state screening in transition-metal compounds, 9: 10301 (J;US)
COPPER SELENIDE SOLAR CELLS
Spray Coating
Low cost, sprayed $CuInSe_2$ solar cell research. First annual progress report, September 15, 1982-September 15, 1983, 9: 9595 (R;US)
COPPER SELENIDES
Electron Microprobe Analysis
Microanalysis of candidate thin & thick film photovoltaic materials, 9: 9624 (J;US)
Microstructure
Microanalysis of candidate thin & thick film photovoltaic materials, 9: 9624 (J;US)
Roughness
Microanalysis of candidate thin & thick film photovoltaic materials, 9: 9624 (J;US)
COPPER SILICIDES
Fabrication
Silicon electrorefining using a semipermeable Cu_3Si:Si anode, 9: 9634 (J;US)
Permeability
Silicon electrorefining using a semipermeable Cu_3Si:Si anode, 9: 9634 (J;US)
CORDOVA QUAD CITIES-2 REACTOR
See QUAD CITIES-2 REACTOR
CORIUM
Chemical Composition
Small scale studies of production of fissium aerosols, 9: 9913 (R;SE)
Molten Metal-Water Reactions
Results of scoping tests in corium-water thermal interactions in ex-vessel geometry, 9: 9921 (J;US)
CORN (MAIZE)
See MAIZE
CORN STOVER
See MAIZE
CORONA (SOLAR)
See SOLAR CORONA
CORTEX (ADRENAL)
See ADRENAL GLANDS
CORUNDUM
Heating
Sustained UO_2 melts using the inductive ring susceptor technique, 9: 10278 (J;US)
Melting
Sustained UO_2 melts using the inductive ring susceptor technique, 9: 10278 (J;US)
COSMIC PARTICLES
See COSMIC RADIATION
COSMIC RADIATION
From sources other than the sun; not for SOLAR RADIATION.
Magnetic Monopoles
Upper limit on flux of cosmic-ray monopoles obtained with a three-loop superconductive detector, 9: 10981 (J;US)
COSMIC RAY DETECTION
Electron Spectrometers
Investigating parameters of the "Elena-F" and "Electron" detectors for space research using the separated beam no. 530 of the ITEF accelerator, 9: 10585 (R;SU;In Russian)
COUNTERS (RADIATION)
See RADIATION DETECTORS
COUPLING CONSTANTS
Renormalization
Broken supersymmetries in high energy physics, 9: 11084 (R;XA)
COVERINGS
Design
Low-level nuclear waste shallow land burial trench isolation. Annual report, October 1982-September 1983, 9: 9485 (R;US)
CRAY COMPUTERS
Computer Graphics
Cray/VAX interactive graphics system, 9: 11383 (R;US)
CRITICALITY ACCIDENTS
See RADIATION ACCIDENTS
CRNL MP TANDEM ACCELERATOR
Uses
Radioisotope detection and dating with tandem accelerators, 9: 10550 (J;US)
CROSSED BEAMS
See COLLIDING BEAMS
CRUCIBLES
Mechanical Vibrations
Directional solidification of silicon in carbon crucibles by an oscillating crucible technique, 9: 9629 (J;US)
CRUDE OIL
See PETROLEUM
CRUISE MISSILES
Detection
Computer assessment of electromagnetic means of detecting approaching cruise missiles, 9: 10454 (R;US)
CRUSTACEANS
Biological Regeneration
Control of molting in crustacea, 9: 10763 (R;US)
Molting
Control of molting in crustacea, 9: 10763 (R;US)
CRYOSTATS
Heat Flow
Heat conduction thru supports between 300°K and 4°K, 9: 10404 (R;US)
Supports
Heat conduction thru supports between 300°K and 4°K, 9: 10404 (R;US)
CRYSTALLOGRAPHY
Rutherford Scattering
Nuclear solid state physics and technology, 9: 11147 (RA;DE;In German)
CRYSTALS
See also DENDRITES
POLYCRYSTALS
Electron Channeling
Characteristics and applications of channeling radiation from relativistic electrons and positrons, 9: 11152 (J;US)
Positron Channeling
Characteristics and applications of channeling radiation from relativistic electrons and positrons, 9: 11152 (J;US)
CT SCANNING
See CAT SCANNING
CULTURAL RESOURCES
Information Systems
Cultural resources and tradition: how computerized data contributes to environmental reviews, 9: 10758 (R;US)
CURIUM 242
Radiobiology
Dosimetry of incorporated transuranic radionuclides, 9: 10890 (R;DD;In German)
CURIUM 243
Excretion
Curium excretion studies in man and baboon: a predictive animal model, 9: 10897 (J;GB)
Radiobiology
Dosimetry of incorporated transuranic radionuclides, 9: 10890 (R;DD;In German)
CURIUM 244
Excretion
Curium excretion studies in man and baboon: a predictive animal model, 9: 10897 (J;GB)
Radiobiology
Dosimetry of incorporated transuranic radionuclides, 9: 10890 (R;DD;In German)

CURRENT-DRIVE HEATING
Efficiency
Efficiency of RF current drive schemes, 9: 11205 (RA;AU)
CURRENTS (ALGEBRAIC)
See ALGEBRAIC CURRENTS
CUTTING TOOLS
Cryogenics
Device for underwater cryogenic cutting, 9: 10414 (P;US)
CYCLIC ACCELERATORS
See also CYCLOTRONS
SYNCHROTRONS
Beam Currents
A high-current racetrack induction accelerator, 9: 10533 (J;US)
CYCLONE SEPARATORS
Failure Mode Analysis
Analysis of a failed separation cyclone from the Dow Chemical Corporation slagging coal gasification plant, 9: 9220 (R;US)
Performance Testing
Measurement of particulate emission using a British Coal Utilization Research Association cyclone probe fitted with a Whatman gf/a microfibre backing filter, 9: 9294 (R;US)
CYCLOTRONS
See also MICROTRONS
Microwave Radiation
High power microwave generation from rotating e-layers in magnetron-type conducting boundary systems, 9: 10499 (J;US)
Plasma Acceleration
A plasma wave accelerator SURFATRON 2, 9: 10532 (J;US)
Radiation Protection
Radiation safety at a neutron generator, 9: 10556 (J;US)
Radioisotopes
Commercial production of radioisotopes for nuclear medicine, 1970-1980, 9: 10808 (J;US)
CYLINDRICAL PARABOLIC COLLECTORS
See PARABOLIC TROUGH COLLECTORS
CYSTAMINE
Radiosensitivity Effects
Incorporation of ^{125}I-deoxyuridine in blood formation organs of mice as criterion of cystamine radioprotection, 9: 10871 (RA;CS;In Czech)

D

D PLUS RESONANCES

D ZERO RESONANCES
See D-1865 RESONANCES
D* PLUS RESONANCES
See D-2007 RESONANCES
D* ZERO RESONANCES
See D-2007 RESONANCES
D-1865 RESONANCES
Lifetime
Ratio of lifetimes for the D^+ and D^0 mesons, 9: 11074 (R;XA)
Particle Production
Results from HRS at PEP, 9: 11051 (R;US)
Weak Particle Decay
Charm and beauty lifetime measurements with the MARK II vertex detector, 9: 11060 (R;US)
Latest results from the MARK II at PEP, 9: 11059 (R;US)
D-2007 RESONANCES
Particle Production
Results from HRS at PEP, 9: 11051 (R;US)
DAIRY INDUSTRY
Energy Consumption
Energy conservation and oil substitution at a dairy company, 9: 10144 (R;NZ)
Fuel Substitution
Energy conservation and oil substitution at a dairy company, 9: 10144 (R;NZ)
DAMPERS (GAS FLOW)
See DRAFT CONTROL SYSTEMS
DANUBE RIVER
Radioactivity
Systematical investigation about the radiation burden of the population induced by the radionuclide concentration in the Danube, 9: 10750 (RA;AT;In German)
DAPHNIA
Mortality
Composition and toxicity of solid waste leachates from industrial coal gasiifiers, 9: 9287 (BA;US)
DARK REPAIR
See BIOLOGICAL REPAIR
DATA BASE MANAGEMENT
Computer Codes
Experiment in benchmarking database systems, 9: 11396 (R;US)
DATA PROCESSING
Manipulation of unit facts.
Errors
Power estimation of sinusoids mounted upon dc background: Conditional problems, 9: 11379 (R;XA)
Signal Distortion
Analytical examination of distortions in power spectra due to sampling errors, 9: 11378 (R;XA)
Power estimation of sinusoids mounted upon dc background: Conditional problems, 9: 11379 (R;XA)
DAUGHTER PRODUCTS
Radioecological Concentration
Comparison of theoretical predictions and measured radon and radon daughter concentrations: toward validation of the UDAD code, 9: 10695 (BA;US)
DC TO AC INVERTERS
See INVERTERS
DDG
See DISTILLERS DRIED GRAINS
DDT
Biological Effects
Study of radionuclides interaction with hydrophytocenosis. Part of a coordinated programme on isotopic-tracer-aided research and monitoring on agricultural residue-biological interactions in aquatic ecosystems. Final report for the period 1 January 1977 - 3 June 1982, 9: 10848 (R;XA)
DEBRIS (NUCLEAR)
See FISSION PRODUCTS
DEC COMPUTERS
Computers manufactured by Digital Equipment Corporation.
Comparative Evaluations
Interactive benchmark comparison between a VAX 11/780 and a VAX 11/782, 9: 11382 (R;US)
Programming
Bootstrapping RSX-11S from ROM memories, 9: 11390 (R;US)
Start-Up
Bootstrapping RSX-11S from ROM memories, 9: 11390 (R;US)
DECAY HEAT REMOVAL

DECISION MAKING
Meetings
Summary and evaluation of the results of the symposium on the role of technology assessment in the decision-making process, 9: 11364 (B;DE)
DEEP INELASTIC SCATTERING
Scale Invariance
Abrupt onset of scaling violation, 9: 11071 (R;XA)
DEFECTS
Not for CRYSTAL DEFECTS.
Ultrasonic Testing
Improvement of sizing methods using focussed probes, 9: 10436 (R;FR;In French)

DEFORESTATION
Environmental Impacts
Isotope characterization of the water vapour in the Amazon region. Final report for the period 1 August 1979 - 31 July 1982, 9: 10642 (R;XA)
DEFORMATION
See also NUCLEAR DEFORMATION
Time Dependence
The relation between deformation recovery and in-situ stress magnitudes, 9: 9419 (J;US)
DEFORMED NUCLEI
Electric Dipole Moments
Enhanced T-nonconserving nuclear moments, 9: 11088 (J;US)
Quadrupole Moments
Enhanced T-nonconserving nuclear moments, 9: 11088 (J;US)
DEGASSING
Vacuum outgassing of various materials, 9: 10445 (R;US)
DEHPA
See HDEHP
DEHUMIDIFIERS
Crossflow Systems
Performance of cross-cooled desiccant dehumidifiers, 9: 10408 (J;US)
Performance
Performance of cross-cooled desiccant dehumidifiers, 9: 10408 (J;US)
DELAYED RADIATION INJURIES
See RADIATION INJURIES
DELETIONS (CHROMOSOMAL)
See CHROMOSOMAL ABERRATIONS
DELTA-966 RESONANCES
Quark Model
Evident manifestations of four-quark states, 9: 11080 (RA;SU;In Russian)
DENDRITES
Solidification
Dynamics of interfacial pattern formation, 9: 11162 (J;US)
DENELCOR COMPUTERS
Programming
Approach to programming multiprocessing algorithms on the Denelcor HEP, 9: 11365 (R;US)
DENMARK
Environmental Policy
Zero/span control of monitors used in the Danish national airquality measurement program, 9: 10659 (R;DK;In Danish)
Wind Power
Offshore wind power in Denmark, 9: 9751 (R;DK;In Danish)
DEOXYPENTOSE NUCLEIC ACID

DEOXYRIBONUCLEIC ACID
See DNA
DEPARTMENT OF DEFENSE
See US DOD
DEPOSITS
Electron Microscopy
Application of optical and electron microscopy to coal conversion systems, 9: 9258 (BA;US)
Optical Microscopy
Application of optical and electron microscopy to coal conversion systems, 9: 9258 (BA;US)
X-Ray Fluorescence Analysis
Application of optical and electron microscopy to coal conversion systems, 9: 9258 (BA;US)
DEPOSITS (GEOLOGICAL)
See GEOLOGIC DEPOSITS
DEREGULATION
Socio-Economic Factors
Household impacts of gasoline decontrol, 9: 9980 (R;US)
DESOXYRIBONUCLEIC ACID
See DNA
DESULFURIZATION
Thermodynamics
Thermodynamic values for desulfurization processes, 9: 9271 (BA;US)
DETECTION (RADIATION)
See RADIATION DETECTION
DETECTORS (RADIATION)
See RADIATION DETECTORS
DEUS
More general term than CO-GENERATION, and preferable for methods using both heat and electric power when both are produced simultaneously and in significant quantities.
See also COGENERATION
Cost Benefit Analysis
Redesigning energy intensive systems for a dual purpose, 9: 10152 (J;US)
DEUTERIUM
Diffusion
Unusual isotope effects for diffusion in VH 0.50 and VT 0.50, 9: 10354 (J;US)
Ion-Molecule Collisions
Electron capture by protons and deuterons, 9: 11036 (J;US)
Isotope Effects
Unusual isotope effects for diffusion in VH 0.50 and VT 0.50, 9: 10354 (J;US)
Muon Reactions
Experimental investigation of muon-catalyzed d-t fusion, 9: 11342 (J;US)
Recombination
Measurements of the hydrogenic recombination coefficient for the TFTR vacuum vessel, 9: 11230 (R;US)
Turbulence
Study of turbulence of plasma of a rapid linear theta-pinch according to the Stark broadening of the spectral lines of deuterium, 9: 11251 (TG;US)
DEUTERIUM IONS
Charge Exchange
Collisional mechanisms in D^- beam sources for MFE experiments and reactors. Technical progress report, 9: 11285 (R;US)
Work Functions
Collisional mechanisms in D^- beam sources for MFE experiments and reactors. Progress report No. 16 for quarter ending December 31, 1983, 9: 11286 (R;US)
DEUTERIUM TARGET
Deuteron Reactions
Neutron polarization measurements using the pulsed-polarized proton and deuteron beams at TUNL, 9: 11017 (J;US)
Proton Reactions
Neutron polarization measurements using the pulsed-polarized proton and deuteron beams at TUNL, 9: 11017 (J;US)
DEUTERON REACTIONS
Fusion Reactions
Complete and incomplete fusion in transition energy range, 9: 11137 (R;FR;In French)
Neutron Spectroscopy
Neutron polarization measurements using the pulsed-polarized proton and deuteron beams at TUNL, 9: 11017 (J;US)
DEUTERON-DEUTERON INTERACTIONS

DNA
Alkylation
Mutagenic properties of O^6-methylguanine in DNA in vivo and in vitro, 9: 10764 (R;US)
Biological Radiation Effects
Inducible error-prone repair in B. subtilis. Progress report, May 1, 1983-April 30, 1984, 9: 10844 (R;US)
Biological Repair
Competition of macromolecular DNA and ^{3}H-dTh in unprogrammed DNA synthesis in LS/B1 cells, 9: 10857 (RA;CS;In Czech)
Inducible error-prone repair in B. subtilis. Progress report, May 1, 1983-April 30, 1984, 9: 10844 (R;US)
Kinetics of ^{3}H-dTh incorporation in DNA in unprogrammed DNA synthesis, 9: 10858 (RA;CS;In Czech)
Measurement of repair patch size by quantitation of nucleotides excised during DNA repair in vivo, 9: 10785 (J;US)
Mutagenic properties of O^6-methylguanine in DNA in vivo and in vitro, 9: 10764 (R;US)
Role of DNA polymerase α in chromosomal aberration production by ionizing radiation, 9: 10783 (R;US)
Chemical Bonds
Interaction of a DNA-binding protein, the gene product of D5 of bacteriophage T5, with double-stranded DNA, 9: 10774 (J;US)
Probing the microenvironment of benzo[a]pyrene diol epoxide-DNA adducts by triple excited state quenching methods, 9: 10780 (J;NL)
Electrophoresis
Comparative mutagenesis of human cells in vitro and in vivo. Progress report and financial statement, 9: 10768 (R;US)
Quantitative and molecular analyses of mutation in a pSV2gpt transformed CHO cell line, 9: 10843 (R;US)
Methylation
Comparative mutagenesis of human cells in vitro and in vivo. Progress report and financial statement, 9: 10768 (R;US)
Radiosensitivity
In vitro study of radiation damage of bacterial DNA, 9: 10859 (RA;CS;In Czech)
Stains
Rapid, one step staining procedures for analysis of cellular DNA and protein by single and dual laser flow cytometry, 9: 10787 (J;US)
Strand Breaks
Inactivation of mammalian cells and DNA with light and heavy ions, 9: 10855 (RA;DE;In German)
DNA ADDUCTS
Biochemical Reaction Kinetics
Application of fluorescence and linear dichroism techniques to the characterization of the covalent adducts derived from interaction of (+/-)-trans-9,10-dihydroxy-anti-11,12-epoxy-9,10,11,12-tetrahydrobenzo[e]pyrene with DNA, 9: 10777 (J;US)
Biological Repair
Comparative mutagenesis of human cells in vitro and in vivo. Progress report and financial statement, 9: 10768 (R;US)
Chemical Properties
Application of fluorescence and linear dichroism techniques to the characterization of the covalent adducts derived from interaction of (+/-)-trans-9,10-dihydroxy-anti-11,12-epoxy-9,10,11,12-tetrahydrobenzo[e]pyrene with DNA, 9: 10777 (J;US)
Liquid Column Chromatography
Comparative mutagenesis of human cells in vitro and in vivo. Progress report and financial statement, 9: 10768 (R;US)
Structural Chemical Analysis
Probing the microenvironment of benzo[a]pyrene diol epoxide-DNA adducts by triple excited state quenching methods, 9: 10780 (J;NL)
Spectroscopic characterizations and comparisons of the structures of the covalent adducts derived from the reactions 7,8-dihydroxy-7,8,9,10-tetrahydrobenzo[a]pyrene and 9,10,11,12-tetrahydrobenzo[e]pyrene with DNA, 9: 10778 (J;US)
DNA POLYMERASES
Biochemical Reaction Kinetics
Mutagenic properties of O^6-methylguanine in DNA in vivo and in vitro, 9: 10764 (R;US)
Biological Functions
Role of DNA polymerase α in chromosomal aberration production by ionizing radiation, 9: 10783 (R;US)
Genes
Inducible error-prone repair in B. subtilis. Progress report, May 1, 1983-April 30, 1984, 9: 10844 (R;US)
Inhibition
Role of DNA polymerase α in chromosomal aberration production by ionizing radiation, 9: 10783 (R;US)
DOLOMITE
Decomposition
Mineral reactions during high temperature oil shale processing, 9: 9418 (J;US)
Permeability
Retention of polyacrylamide by berea sandstone, baker dolomite, and sodium kaolinite during polymer flooding. Paper SPE 8981, 9: 9323 (R;US)
Porosity
Retention of polyacrylamide by berea sandstone, baker dolomite, and sodium kaolinite during polymer flooding. Paper SPE 8981, 9: 9323 (R;US)
Sorptive Properties
Retention of polyacrylamide by berea sandstone, baker dolomite, and sodium kaolinite during polymer flooding. Paper SPE 8981, 9: 9323 (R;US)
DOMAIN STRUCTURE
Symmetry Breaking
Trivial solution to the domain wall problem, 9: 11103 (R;XA)
DOMINANT MUTATIONS
Radioinduction
In vivo radiobiology of heavy ions, 9: 10910 (J;US)
DORMITORIES

ENERGY CONSERVATION
Demonstration Programs
Midwest Appropriate Technology Small Grants Program project summaries, 9: 9977 (R;US)
Federal Assistance Programs
Energy conservation: Reagan wastes a program, 9: 10024 (J;US)
Forecasting
Quantitative effects of energy conservation policy in the Federal Republic of Germany. Assessment of energy savings through 1985, 9: 10019 (R;DE;In German)
Quantitative effects of energy conservation policy in the Federal Republic of germany. Assessment of energy savings through 1985, 9: 10020 (R;DE;In German)
Information Dissemination
Reaching people with energy conservation information: four statewide residential case studies, 9: 10177 (R;US)
Political Aspects
Quantitative effects of energy conservation policy in the Federal Republic of Germany. Assessment of energy savings through 1985, 9: 10019 (R;DE;In German)
Quantitative effects of energy conservation policy in the Federal Republic of germany. Assessment of energy savings through 1985, 9: 10020 (R;DE;In German)
Recommendations
Policy implications of a successful energy conservation program in university buildings and dormitories, 9: 10022 (J;CH)
Socio-Economic Factors
Responses to changing energy conditions among Massachusetts households, 9: 10087 (J;GB)
Standards
Residential Conservation Service installer's guide, 9: 10082 (R;US)
ENERGY CONSUMPTION
Econometrics
Effects of investments on energy consumption in industry, 9: 9983 (R;DE;In German)
Energy Analysis
Global energy production and use to the year 2050, 9: 9973 (J;GB)
Energy Balance
Role of electric power in the southeast Alaska energy economy. Phase II. 1981 Juneau energy balance, 9: 10034 (R;US)
Energy Models
BEPS equivalency study. Final report, 9: 10018 (R;US)
Global Aspects
Global energy production and use to the year 2050, 9: 9973 (J;GB)
Regression Analysis
Measures of nonlinearity for segmented regression models. Technical summary report, 9: 10057 (R;US)
Socio-Economic Factors
Responses to changing energy conditions among Massachusetts households, 9: 10087 (J;GB)
ENERGY COSTS
See ENERGY ACCOUNTING
ENERGY DEMAND
Environmental Effects
Energy supply and demand implications of CO_2, 9: 10759 (J;GB)
Forecasting
Reestimation of the EDM in the Netherlands and the reference case. Final report, 9: 9972 (R;US)
ENERGY EFFICIENCY STANDARDS
Evaluation
An evaluation of ASHRAE Standard 94.2 for testing electrically charged thermal energy storage room-size units, 9: 9953 (J;US)
An evaluation of ASHRAE standard 94.2 for testing electrically charged thermal energy storage central units, 9: 9954 (J;US)
ENERGY EXPENSES
Economic Impact
Household impacts of gasoline decontrol, 9: 9980 (R;US)
ENERGY EXTENSION SERVICE
Hawaii Non-Pilot States Program for the National Energy Extension Service. Final report, 9: 10055 (R;US)
Operation
Wisconsin Energy Extension Service pilot project. Final report, October 1977-March 1980, 9: 10176 (R;US)
Planning
DOE/EES non-pilot grant final program report, 9: 10175 (R;US)
Wisconsin Energy Extension Service pilot project. Final report, October 1977-March 1980, 9: 10176 (R;US)
ENERGY INTEGRATED INDUSTRIAL PARKS
See ENERGY PARKS
ENERGY MANAGEMENT
Technology Transfer
Energy management and community planning. Final technical narrative report, 9: 10173 (R;US)
ENERGY MODELS
Calculation Methods
Development of equipment seasonal performance models for simplified energy analysis methods, 9: 10123 (J;US)
Energy Analysis
Development of equipment seasonal performance models for simplified energy analysis methods, 9: 10123 (J;US)

ENERGY PARKS
Wind Turbines
Wind turbine parks. Analysis of sites (Denmark), 9: 9755 (R;DK;In Danish)
ENERGY PERFORMANCE STANDARDS
See ENERGY EFFICIENCY STANDARDS
ENERGY POLICY
Illinois land report: Rice Lake Conservation Area. Volume 1. Final document, 9: 9286 (R;US)
Cost Benefit Analysis
Quantitative effects of energy conservation policy in the Federal Republic of Germany. Assessment of energy savings through 1985, 9: 10019 (R;DE;In German)
Quantitative effects of energy conservation policy in the Federal Republic of germany. Assessment of energy savings through 1985, 9: 10020 (R;DE;In German)
Economic Impact
Extending the CHRD System into a microanalytic model of the US economy: a literature review and preliminary design, 9: 9979 (R;US)
Fuels-future availability, 9: 9990 (R;US)
Education
Energy policy in business, 9: 9975 (R;CH;In German and French)
Environmental Impacts
Energy and environmental impact: what have we learned?, 9: 10030 (J;US)
Fuels-future availability, 9: 9990 (R;US)
Planning
Fuels-future availability, 9: 9990 (R;US)
ENERGY SHORTAGES
Econometrics
Energy conservation after decontrol: economic consequences of alternative policy choices, 9: 9342 (BA;US)
Economic Impact
Energy conservation after decontrol: economic consequences of alternative policy choices, 9: 9342 (BA;US)
ENERGY SOURCE DEVELOPMENT
Data Acquisition
Data-gathering methodology for modeling energy research development and demonstration, 9: 10003 (BA;US)
Environmental Impacts
Cultural resources and tradition: how computerized data contributes to environmental reviews, 9: 10758 (R;US)
Financial Incentives
Midwest Appropriate Technology Small Grants Program project summaries, 9: 9977 (R;US)
Grants

ENERGY SUBSTITUTION
Economic Elasticity
Cost prices and partially fixed factor proportions in energy substitution, 9: 9982 (R;DE)
ENERGY SUPPLIES
Economic Elasticity
Supply response of resource extracting firms to pre-announced price changes, 9: 9981 (R;DE)
Environmental Effects
Energy supply and demand implications of CO_2, 9: 10759 (J;GB)
ENERGY YIELD
Energy Analysis
Global energy production and use to the year 2050, 9: 9973 (J;GB)
Global Aspects
Global energy production and use to the year 2050, 9: 9973 (J;GB)
ENEWETAK
See ENIWETOK
ENGINES
For machines with self-contained energy sources; for machines utilizing external energy sources for normal operation see MOTORS.
Fuel Economy
Theoretical limits of engine economy with alternative automotive fuels, 9: 9559 (J;GB)
Fuel Substitution
Theoretical limits of engine economy with alternative automotive fuels, 9: 9559 (J;GB)
ENGLAND
See UNITED KINGDOM
ENIWETOK
Radioecological Concentration
Mid-Pacific Research Laboratory annual report, October 1, 1982-September 30, 1983, 9: 10706 (R;US)
ENRICHED URANIUM
Gamma Spectroscopy
Reference materials for nondestructive assay of special nuclear material. Volume 2. Thin metal foils of highly enriched uranium, 9: 9524 (R;US)
ENVELOPE HOUSES
See DOUBLE ENVELOPE BUILDINGS
ENVIRONMENT
Monitoring
Quality assurance in environmental measurements, 9: 10651 (RA;US)
Radiation Monitoring
Environmental radioactivity. Contributions to environment protection, provision affairs, veterinary administration, 9: 10688 (R;AT;GE)
ENVIRONMENTAL EFFECTS
This descriptor is to be used only when the actual effects on the environment are discussed.
Monitoring
Support service to the Office of Oil, Gas, Shale and Coal Liquids. Final report, 9: 9218 (R;US)
ENVIRONMENTAL IMPACTS
This descriptor is to be used to describe the possible effects on the environment from a proposed project.
Research Programs
Great Plains Gasification Associates Facility, North Dakota: recommendations for a supplemental environmental program. Final report of the Ecological and Environmental Effects Subcommittee, 9: 9988 (R;US)
ENVIRONMENTAL MATERIALS
Use only for unspecified samples from the environment. See also specific environmental materials.
Activation Analysis
Simultaneous determination of Cd, Cu, Mo, Zn in biological samples using neutron activation analysis combined with radiochemical separation, 9: 10322 (RA;CS;In Czech)
Use of INAA in monitoring losses of trace elements during ashing of biological materials, 9: 10323 (RA;CS;In Czech)

Combustion
Use of INAA in monitoring losses of trace elements during ashing of biological materials, 9: 10323 (RA;CS;In Czech)
Combustion Products
Use of INAA in monitoring losses of trace elements during ashing of biological materials, 9: 10323 (RA;CS;In Czech)
Sample Preparation
Simultaneous determination of Cd, Cu, Mo, Zn in biological samples using neutron activation analysis combined with radiochemical separation, 9: 10322 (RA;CS;In Czech)

ENVIRONMENTAL POLICY
Acid rain: the need to speak out, 9: 9288 (BA;US)
Illinois land report: Rice Lake Conservation Area. Volume 1. Final document, 9: 9286 (R;US)
Technologies and management strategies for hazardous waste control. Summary report, 9: 9994 (R;US)
Reviews
Environmental policy in the 8th Deutscher Bundestag (Federal Parliament) and Bundesrat (Federal Council) (1976-1980), 9: 10031 (B;DE;In German)

ENVIRONMENTAL QUALITY
See also AIR QUALITY
WATER QUALITY
Information Systems
Assessment of the DOE Office of Environment Planning and Budgeting Information System. Final report, 9: 11395 (R;US)

ENZYMES
The enzyme code numbers from ENZYME NOMENCLATURE: RECOMMENDATIONS (1972) OF THE INTERNATIONAL UNION OF PURE AND APPLIED CHEMISTRY AND THE INTERNATIONAL UNION OF BIOCHEMISTRY is given in a Scope Note for the individual enzymes.
Biochemical Reaction Kinetics
Lattice theory of reaction efficiency in compartmentalized systems. II. Reduction of dimensionality, 9: 10352 (J;US)
Liquid Column Chromatography
Partitioning of copper among copper-binding proteins in the mussel Mytilus edulis exposed to soluble copper, 9: 10935 (R;US)
Molecular Structure
Local structure of manganese in the photosynthetic apparatus and superoxide dismutase: an x-ray absorption study, 9: 10772 (R;US)
X-Ray Spectroscopy
Local structure of manganese in the photosynthetic apparatus and superoxide dismutase: an x-ray absorption study, 9: 10772 (R;US)

EPIPHYSIS (BONES)
See BONE TISSUES

EPOXIDES
Bonding
Debonding of epoxy from glass in irradiated laminates, 9: 10283 (RA;US)
Comparative Evaluations
Present situation and future developments of corrosion protection coatings used by the gas industry in France - characteristics and evaluation of performances, 9: 9401 (BA;US;FR)
Failures
Delamination of a fusion bonded epoxy coating from cathodically protected mild steel (Cathodic disbondment), 9: 9399 (BA;US)
Mechanical Properties
Strength of G-10CR and G-11CR epoxies after irradiation at 5 K by gamma rays, 9: 10284 (RA;US)
Physical Radiation Effects
Debonding of epoxy from glass in irradiated laminates, 9: 10283 (RA;US)
Strength of G-10CR and G-11CR epoxies after irradiation at 5 K by gamma rays, 9: 10284 (RA;US)

EPOXY COMPOUNDS

ERBIUM 156
Energy-Level Transitions
Suppression of neutron emission after heavy-ion fusion: Is shape relaxation affected by a superdeformed minimum?, 9: 11132 (J;US)

ERBIUM 158
Magnesium 24 Reactions
Fission of polonium, osmium, and erbium composite systems, 9: 11136 (J;US)
Nickel 64 Reactions
Fission of polonium, osmium, and erbium composite systems, 9: 11136 (J;US)
Oxygen 16 Reactions
Fission of polonium, osmium, and erbium composite systems, 9: 11136 (J;US)
Sulfur 32 Reactions
Fission of polonium, osmium, and erbium composite systems, 9: 11136 (J;US)

ERBIUM BORIDES
Ferromagnetism
Influence of strain on the coexistence state of ferromagnetic superconductors, 9: 10275 (J;US)
Superconductivity
Influence of strain on the coexistence state of ferromagnetic superconductors, 9: 10275 (J;US)

ERBIUM ISOTOPES
See also ERBIUM 156
ERBIUM 158
High Spin States
Shell effects at high angular momentum, 9: 11131 (J;US)

ERBIUM OXIDES
Dispersions
Formation and thermal stability of an oxide dispersion in a rapidly solidified Ti-Er alloy, 9: 10255 (J;US)

ERYTHROBLASTS
See BONE MARROW CELLS

ERYTHROCYTES
See also RETICULOCYTES
Membrane Transport
K562 cell anion exchange differs markedly from that of mature red blood cells, 9: 10831 (J;US)

ERYTHROPOIETIN
Quantity Ratio
Plasma levels of immunoreactive erythropoietin after acute blood loss in man, 9: 10835 (J;GB)
ESCHERICHIA COLI
Biological Repair
Measurement of repair patch size by quantitation of nucleotides excised during DNA repair in vivo, 9: 10785 (J;US)
ESTERASES
Code number 3.1.
Biochemical Reaction Kinetics
Investigation of the nature of semisynthetic esterases. Annual progress report, September 15, 1982-September 14, 1983, 9: 10766 (R;US)
Enzyme Activity
Investigation of the nature of semisynthetic esterases. Annual progress report, September 15, 1982-September 14, 1983, 9: 10766 (R;US)
Purification
Investigation of the nature of semisynthetic esterases. Annual progress report, September 15, 1982-September 14, 1983, 9: 10766 (R;US)
ESTROGENS
Receptors
Characterization of two uterine proteases and their actions on the estrogen receptor, 9: 10781 (J;US)
ESTUARINE ECOSYSTEMS
See AQUATIC ECOSYSTEMS
ETHANE
Absorption Spectra
Differential optical absorption techniques for diagnostics of coal gasification. Technical progress report, October, November, December 1982, 9: 9260 (R;US)
Dew Point
PVT, VLE and H data from Burnett-isochoric apparatus (Bubble point and dew point), 9: 9411 (BA;US)
Fuel Substitution
Theoretical limits of engine economy with alternative automotive fuels, 9: 9559 (J;GB)
Thermodynamic Properties
PVT, VLE and H data from Burnett-isochoric apparatus (Bubble point and dew point), 9: 9411 (BA;US)
Viscosity
Fluid property research at the National Bureau of Standards, Boulder, 9: 9407 (BA;US)
1,2-ETHANEDIOL
See GLYCOLS
ETHANOL
Distillation
Solar alcohol distillation system. Final report, Septemer 29, 1980-January 31, 1982, 9: 9548 (R;US)
Marketing Research
Market analyses relative to the Renewable Energy, Inc. ethanol plant feasibility study, 9: 9545 (R;US)
Production
Biogasohol, 9: 9550 (R;AT;In German)
Biogasohol - a necessity of national economy, 9: 9556 (RA;AT;In German)
Decentralized biogasohol model of the agricultural ethanol distilleries, 9: 9555 (RA;AT;In German)
Do-it-yourself guideline for constructing a solar alcohol distillation system, 9: 9549 (R;US)
Kinetic study of ethanol production by Zymomonas mobilis, 9: 9558 (R;US)
Straw as an alternative, 9: 9553 (RA;AT;In German)
Sugar industry - number 1 with biogasohol, 9: 9552 (RA;AT;In German)
Solar Distillation
Do-it-yourself guideline for constructing a solar alcohol distillation system, 9: 9549 (R;US)
Feasibility study on the ethanol-water solar fractionating system, 9: 9709 (J;GB)
ETHANOL FUELS
Use for pure ethanol, ethanol-water mixtures, or ethanol with additives; for ethanol-gasoline mixtures, use GASOHOL.
Fuel Substitution
Theoretical limits of engine economy with alternative automotive fuels, 9: 9559 (J;GB)
ETHANOL PLANTS
By-Products
Biosprit - avoiding faulty planning, 9: 9554 (RA;AT;In German)
Environmental Effects
Alcohol fuels from biomass, 9: 9616 (J;US)
Feasibility Studies
Market analyses relative to the Renewable Energy, Inc. ethanol plant feasibility study, 9: 9545 (R;US)
Financial Incentives
Market analyses relative to the Renewable Energy, Inc. ethanol plant feasibility study, 9: 9545 (R;US)
Legal Aspects
Market analyses relative to the Renewable Energy, Inc. ethanol plant feasibility study, 9: 9545 (R;US)
Waste Heat Utilization

Risks of useful energy supply. Problems and consequences. Text volume, 9: 10760 (B;DE;In German)
Environmental Policy
Environmental policy in the 8th Deutscher Bundestag (Federal Parliament) and Bundesrat (Federal Council) (1976-1980), 9: 10031 (B;DE;In German)
Pollution control in the city of Hamburg, 9: 10002 (R;DE;In German)
Fuel Cycle
Fuel cycles in nuclear power plants, 9: 9420 (RA;DE;In German)
Gas Utilities
DVGW annual report '82, 9: 9989 (R;DE;In German)
In-Situ Gasification
Aims and present state of the Belgo-German in situ gasification project, 9: 9255 (BA;US)
Nuclear Energy
Nuclear energy in the Federal Republic of Germany: description and evaluation of assessments, 9: 10015 (BA;DE)
Water Supply
DVGW annual report '82, 9: 9989 (R;DE;In German)
Water Utilities
DVGW annual report '82, 9: 9989 (R;DE;In German)
FEED MATERIALS PLANTS
Mill Tailings
Uranium mill tailings remedial action project (UMITRAP) - Cover and liner technology development project, 9: 9507 (BA;XA)
Personnel Dosimetry
Comparison of theoretical predictions and measured radon and radon daughter concentrations: toward validation of the UDAD code, 9: 10695 (BA;US)
Radiation Monitoring
Finding and evaluating potential radiological problems in the vicinity of uranium milling sites, 9: 9516 (BA;XA)
FEMALE GENITALS
See also OVARIES
UTERUS
Carcinomas
Malignant tumours of the vulva. A study of the effects of radiotherapy, surgery and cho-emotherapy in combination or used alone, 9: 10804 (R;SE)
FEMUR
Autoradiography
Autoradiographically determined androgen localization in immunity organs of mice following irradiation, 9: 10873 (RA;CS;In Czech)
FERMENTATION ALCOHOL
See ETHANOL
FERMI FLUID
See FERMI GAS
FERMI GAS
Energy-Level Density
Level density of fermion systems, 9: 11169 (RA;DE;In German)
Irreversible Processes
Equilibration in fermion systems, 9: 11170 (RA;DE;In German)
Model study of two interacting fermi gases, 9: 11173 (RA;DE;In German)
Solution of a reduced occupation number equation for fermion systems, 9: 11171 (RA;DE;In German)
FERMI LIQUID
See FERMI GAS
FERMI-DIRAC GAS
See FERMI GAS
FERMILAB ACCELERATOR
Facility at Fermi National Accelerator Laboratory, Batavia, Illinois, includes main synchroton, booster synchrotron, and linac.
Data Processing
Report of ad hoc committee on future computing needs for Fermilab, 9: 10506 (R;US)
Heavy Ion Accelerators
Accelerating heavy ions in Fermilab, 9: 10509 (R;US)
Pollution Control
Fermilab's approach to PCBs, 9: 10705 (RA;US)
Research Programs
Fermilab 1982. Annual report of the Fermi National Accelerator Laboratory, 9: 10507 (R;US)
FERMIONS
See also BARYONS
LEPTONS
Composite Models
Model for the structure of point-like fermions: Qualitative features and physical description, 9: 11083 (J;US)
Dirac Equation
Consistent formulation of fermions on a Minkowski lattice p, 9: 11111 (J;US)
Mass
Fermion mass ratios and low energy grand unification, 9: 11104 (R;XA)
Particle Structure
Gauge bosons as composites of fermions, 9: 11070 (R;XA)
FERRICYANIDES
Electrochemistry
Development of alkaline zinc/ferricyanide battery, 9: 9956 (J;US)
FERRITIC STEELS
Chemical Reaction Kinetics
Precipitation reactions during the heat treatment of ferritic steels, 9: 10257 (J;US)
Creep
Evaluation of ferritic alloy Fe-2 1/4Cr-1Mo after neutron irradiation - irradiation creep and swelling, 9: 10230 (R;US)
Heat Treatments
Precipitation reactions during the heat treatment of ferritic steels, 9: 10257 (J;US)
Mechanical Properties
Influence of composition and thermomechanical treatment on EM 12 properties (Cr-9, Mo-2, V, Nb steel), 9: 10216 (R;FR)
Physical Radiation Effects
Evaluation of ferritic alloy Fe-2 1/4Cr-1Mo after neutron irradiation - irradiation creep and swelling, 9: 10230 (R;US)

Swelling in several commercial alloys irradiated to very high neutron fluence, 9: 10228 (R;US)
Precipitation
Precipitation reactions during the heat treatment of ferritic steels, 9: 10257 (J;US)
Swelling
Evaluation of ferritic alloy Fe-2 1/4Cr-1Mo after neutron irradiation - irradiation creep and swelling, 9: 10230 (R;US)
Swelling in several commercial alloys irradiated to very high neutron fluence, 9: 10228 (R;US)
Uses
Ferritic steels for French LMFBR steam generators, 9: 9817 (R;FR)

FERTILIZERS
Activation Analysis
Determination of nitrogen, phosphorus, potassium, and chlorine levels in fertilizers by NAA using 14 MeV neutrons, 9: 10326 (RA;CS;In Slovak)
Energy Consumption
Comparison of energy requirements for production of high-nitrogen mixed fertilizer by the nitrophosphate route with the urea-ammonium phosphate route, 9: 10150 (R;US)
Production
Comparison of energy requirements for production of high-nitrogen mixed fertilizer by the nitrophosphate route with the urea-ammonium phosphate route, 9: 10150 (R;US)

FESHBACH-PORTER-WEISSKOPF MODEL
See OPTICAL MODELS

FFTF REACTOR
After-Heat Removal
Transient testing of the FFTF for decay heat removal by natural convection, 9: 9932 (BA;FR)
Containment Systems
Seismic analysis of a nonlinear airlock door system, 9: 9919 (J;US)
Man-Machine Systems
Optimization of the man-machine interface for LMFBRs, 9: 9930 (BA;FR)
Reactor Maintenance
Optimization of the man-machine interface for LMFBRs, 9: 9930 (BA;FR)
Reactor Operation
Optimization of the man-machine interface for LMFBRs, 9: 9930 (BA;FR)
Safety related experience in FFTF startup and operation, 9: 9929 (BA;FR)
Reactor Start-Up
Safety related experience in FFTF startup and operation, 9: 9929 (BA;FR)

FIBERGLASS
Bonding
Debonding of epoxy from glass in irradiated laminates, 9: 10283 (RA;US)
Physical Radiation Effects
Debonding of epoxy from glass in irradiated laminates, 9: 10283 (RA;US)

FIBROBLASTS
Biological Radiation Effects
Radiobiology of pions at LAMPF, 9: 10907 (J;US)
Hybridomas
Cytogenetic characterization of the CHO mutant EM9, 9: 10773 (R;US)
Sister Chromatid Exchanges
Cytogenetic characterization of the CHO mutant EM9, 9: 10773 (R;US)

FIBROSARCOMAS
Radiotherapy
Fibrosarcoma of bone. A clinical-radiological investigation, 9: 10800 (R;NL;In Dutch)

FIELD-REVERSED MIRROR REACTORS
Design
'compact' reversed-field pinch (CRFP) reactor design, 9: 11355 (BA;GB)
Reverse-Field Pinch
'compact' reversed-field pinch (CRFP) reactor design, 9: 11355 (BA;GB)

FIELDS (MAGNETIC)
See MAGNETIC FIELDS

FILM DOSIMETRY
Image Processing
Accelerated color development of irradiated radiochromic dye films, 9: 10623 (J;US)

FILM FLOW
Boundary Layers
Heat and mass transfer in turbulent boundary layers along evaporating rippled water films, 9: 10428 (R;DE;In German)
Heat Transfer
Heat and mass transfer in turbulent boundary layers along evaporating rippled water films, 9: 10428 (R;DE;In German)
Mass Transfer
Heat and mass transfer in turbulent boundary layers along evaporating rippled water films, 9: 10428 (R;DE;In German)

FILMS
Not for PHOTOGRAPHIC FILMS or NUCLEAR EMULSIONS.
X-Ray Diffraction
Example of progress and future perspectives in X-ray synchrotron diffraction studies, 9: 10200 (R;DK)

FILTERS
See also AIR FILTERS
ELECTRIC FILTERS
Design
Filters for stochastic cooling of longitudinal beam emittance, 9: 10502 (J;US)

FILTERS (ELECTRIC)
See ELECTRIC FILTERS

FINGERPRINTING (OIL SPILLS)
See OIL SPILLS

FIREDAMP
See METHANE

FIRES
Computerized Simulation
Heat conduction analog model of urban fire spread, 9: 11399 (R;US)
Mathematical Models
Heat conduction analog model of urban fire spread, 9: 11399 (R;US)

FIREWOOD
See WOOD FUELS

FIRST WALL
Diagnostic Techniques
Diagnostic techniques for measuring temperature transients and stress transients in the first wall of an ICF reactor, 9: 11277 (R;US)
Drinking Water
Some environmental aspects of fusion reactor waste: Potential environmental concentrations of relevant radionuclides in drinking water, 9: 9526 (RA;XA)
Evaporation
Vaporized wall material/plasma interaction during plasma disruption, 9: 11188 (R;US)
Fractures
Thermal shock considerations for the TFCX limiter and first wall, 9: 11273 (R;US)
Radioactivation
Comparison of activation in STARFIRE and MARS first-walls, 9: 11293 (R;US)
Thermal Stresses
Diagnostic techniques for measuring temperature transients and stress transients in the first wall of an ICF reactor, 9: 11277 (R;US)
Thermal shock considerations for the TFCX limiter and first wall, 9: 11273 (R;US)
Trapping
Measurements of the hydrogenic recombination coefficient for the TFTR vacuum vessel, 9: 11230 (R;US)

FISCHER-TROPSCH SYNTHESIS
Catalysts
Cation promotion effects in zeolite-supported F-T catalysts. First quarterly report, September-November 1983, 9: 9538 (R;US)

Characterization of supported iron catalysts during Fischer-Tropsch synthesis. Technical progress report, August 1, 1983-December 31, 1983, 9: 9537 (R;US)
Metal boride catalysts for indirect liquefaction. Quarterly technical progress report, September 1-November 30, 1983, 9: 9536 (R;US)
Chemical Reactors
Effects of mass transfer on the performance of slurry reactors used for Fischer-Tropsch synthesis, 9: 9542 (J;GB)
FISHES
Hematology
Thermal effects on bluegill hematology. Final report, 9: 10914 (R;US)
Mortality
Concentrations of copper-binding proteins in livers of bluegills exposed to increased concentrations of soluble copper, 9: 10931 (R;US)
FISSION NEUTRONS
See also PROMPT NEUTRONS
Multiplicity
Code ALICE B and B: a precompound/evaporation fission code emphasizing neutron yields, 9: 11143 (R;US)
Neutron Spectra
Code ALICE B and B: a precompound/evaporation fission code emphasizing neutron yields, 9: 11143 (R;US)
FISSION PRODUCT RELEASE
Coordinate with descriptors for the area of release such as BIOSPHERE or COOLANTS, and for the specific fission products, if known.
Diffusion
High temperature migration of uranium - thorium mixtures in H451 graphite, 9: 9906 (RA;US)
Radioactive Aerosols
Gas-phase transport of fission products, 9: 9907 (RA;US)
Temperature Dependence
Effect of reactor temperature on fission product release in the experimental VHTR, 9: 9905 (RA;US)
FISSION PRODUCTS
Cross Sections
Lumped fission product neutron cross sections based on ENDF/B-V for fast reactor analysis, 9: 9819 (J;US)
Data Base Management
Lumped fission product neutron cross sections based on ENDF/B-V for fast reactor analysis, 9: 9819 (J;US)
Emission Spectroscopy
Inductively coupled plasma-atomic emission spectrometry (ICP-AES) in support of nuclear waste management, 9: 10311 (R;US)
Neutron Spectra
Lumped fission product neutron cross sections based on ENDF/B-V for fast reactor analysis, 9: 9819 (J;US)
FISSIONABLE MATERIALS MANAGEMENT
See NUCLEAR MATERIALS MANAGEMENT
FISSIUM
Chemical Composition
Small scale studies of production of fissium aerosols, 9: 9913 (R;SE)
FISSURED FORMATIONS
See FRACTURED RESERVOIRS
FIXED BED
See PACKED BED
FLAME PROPAGATION
Numerical Solution
Numerical simulation of flame propagation in a closed vessel, 9: 10391 (R;US)
FLAMES
Monitoring
Comparison of the picture of the intensity of radiation of a flame obtained by a television camera with intensity picture obtained from temperature and concentration measurements, 9: 10393 (R;DE;In German)
Radiant Heat Transfer
Radiation measurement in flames and furnaces, 9: 10394 (BA;US)
Remote Sensing
Applications of laser techniques for combustion studies, 9: 10392 (R;SE)
Temperature Measurement
Comparison of the picture of the intensity of radiation of a flame obtained by a television camera with intensity picture obtained from temperature and concentration measurements, 9: 10393 (R;DE;In German)
FLASKS
See CASKS
FLAT PLATE COLLECTORS
Cost
Specification/cost data base: residential retrofit, 9: 9705 (R;US)
Modular Structures
Cost analyses of modular flat-panel and concentrator photovoltaic array fields, 9: 9675 (J;US)
Specifications
Specification/cost data base: residential retrofit, 9: 9705 (R;US)
FLAVOR MODEL
Postulated Particles
Approach towards minimality - supersymmetry at the preonic or pre-preonic level, 9: 11085 (R;XA)
FLAWS
See DEFECTS
FLAX PLANTS
Genetic Radiation Effects
Chimerism in M_1 plants of Vicia faba, Capsicum annuum and Linum usitatissimum, 9: 10854 (RA;XA)
Radiation Chimeras
Chimerism in M_1 plants of Vicia faba, Capsicum annuum and Linum usitatissimum, 9: 10854 (RA;XA)
FLORIDA
Biomass Plantations
Production of nonconventional crops for methane feedstocks (Saw palmetto, castorbean, dogfennel, sida, pigweed, saltbush), 9: 9622 (BA;US)
FLOTATION
Reagents
Flotation of coal using micro-bubbles and inorganic salts, 9: 9300 (BA;US)
FLOW REGULATORS
See also DRAFT CONTROL SYSTEMS
VALVES
Mechanical Tests
Short-Tube refrigerant flow restrictors, 9: 10118 (J;US)
FLOWMETERS
Accuracy
Buckling and eccentricity effects on orifice metering accuracy, 9: 9390 (BA;US)
Capacitors
Determining the mass flow of gases using a capacitive differential pressure transducer with vibrating membrane, 9: 10632 (R;DE;In German)
Design
Buckling and eccentricity effects on orifice metering accuracy, 9: 9390 (BA;US)
Development of a multipath ultrasonic flowmeter for the measurement of high pressure gas flows, 9: 9391 (BA;US)
Performance Testing
Gas orifice meter performance with new mass flow reference system, 9: 9392 (BA;US)
FLUE GAS
Chemical Composition
Long-term study of a 240 MW coal powder fueled heat electric station, 9: 9282 (R;SE;In Swedish)
Denitrification
Demand for lime and other raw materials in fluegas cleaning, 9: 9268 (R;SE;In Swedish)
Kinetics of reactions in a wet flue gas simultaneous desulfurization and denitrification system, 9: 9275 (BA;US)
Desulfurization
Characterization of volatile organic components of Nahcoltie and Trona, 9: 9278 (BA;US)
Conceptual design and economics of an improved magnesium oxide flue gas desulfurization, 9: 9279 (BA;US)
Demand for lime and other raw materials in fluegas cleaning, 9: 9268 (R;SE;In Swedish)
Evaluation of sodium thiosulfate additive on the performance of a spray tower (train 100) scrubber system using limestone

slurry, May 5, 1982-August 17, 1982. Final report, 9: 9269 (R;US)
Flue gas desulfurization, 9: 9270 (B;US)
Kinetics of reactions in a wet flue gas simultaneous desulfurization and denitrification system, 9: 9275 (BA;US)
Kinetics of the oxidation of bisulfite ion by oxygen, 9: 9276 (BA;US)
Reliable data for flue gas desulfurization processes, 9: 9272 (BA;US)
Thermal decomposition of sulfite, bisulfite, and disulfite solutions, 9: 9274 (BA;US)
Thermodynamic values for desulfurization processes, 9: 9271 (BA;US)
Use of Pitzer's equations to estimate strong-electrolyte activity coefficients in aqueous flue gas desulfurization processes, 9: 9273 (BA;US)

Heat Recovery
Development and application of energy-saving O_2 control system with variable voltage frequency inverter (VVVF) for forced draft fan (FDF), 9: 10156 (BA;US)

Heat Recovery Equipment
High-temperature flue gas heat recovery system, 9: 10159 (BA;US)

Mutagen Screening
Effects of coal and oil fly ash on sister chromatid exchange (SCE) in a macrophage like cell line, 9: 10923 (R;SE)
Mutagenicity in emissions from coal and oil fired boilers as detected by the salmonella/microsome assay, 9: 10657 (R;SE)
Mutagenicity tests of flue gas emissions from coal and oil fired plants. Investigation of the cells of Drosophila and mammals, 9: 9317 (R;SE;In Swedish)

Sampling
Measurement of particulate emission using a British Coal Utilization Research Association cyclone probe fitted with a Whatman gf/a microfibre backing filter, 9: 9294 (R;US)

Scrubbing
Evaluation of sodium thiosulfate additive on the performance of a spray tower (train 100) scrubber system using limestone slurry, May 5, 1982-August 17, 1982. Final report, 9: 9269 (R;US)

Vapor Condensation
Corrosion in H.E.-boilers and analysis of flue gas condensate, 9: 10466 (BA;US)

Waste Heat Utilization
Fully premixed natural gas burners for use in high thermal efficiency domestic boilers, 9: 10101 (BA;US)

FLUIDIZED BED

Agglomeration
Fluidization behavior of sticky particles, 9: 10459 (R;US)

Jets
Statistical study of the grid zone behavior in a shallow gas-solid fluidized bed using a mini-capacitance probe, 9: 10432 (J;GB)

FLUIDIZED BED HYDROGENATION PROCESS

Scale Models
Use of modelling techniques in SNG process development, 9: 9242 (BA;US)

FLUIDIZED-BED COMBUSTORS

Air Flow
20 atmosphere rig PFBC test results: Test 13, investigations into the use of two-stage air admission, 9: 10462 (R;US)

Construction
Industrial application of fluidized bed combustion. Progress report, January-September 1983, 9: 10460 (R;US)

Design
UK developments in industrial coal firing, 9: 9311 (BA;US)

Gaseous Wastes
20 atmosphere rig PFBC test results: Test 13, investigations into the use of two-stage air admission, 9: 10462 (R;US)

Materials Testing
Long term materials test program. Quarterly report, October-December 1982, 9: 10461 (R;US)

Testing
20 atmosphere rig PFBC test results: Test 13, investigations into the use of two-stage air admission, 9: 10462 (R;US)
20 atmosphere rig PFBC test results: Tests 14 and 15, investigations with a coarse coal-water mixture, 9: 10463 (R;US)
Industrial application of fluidized bed combustion. Progress report, January-September 1983, 9: 10460 (R;US)

FLUIDS
Not for BODY FLUIDS.
See also GASES
GEOTHERMAL FLUIDS
WORKING FLUIDS

Heating
High frequency acoustic instabilities in heated fluids, 9: 11048 (R;US)

Instability
High frequency acoustic instabilities in heated fluids, 9: 11048 (R;US)

Shock Waves
Pattern formation by shock processes, 9: 11046 (R;US)

FLUID-STRUCTURE INTERACTIONS

Shells
Influence of geometrical imperfections on the buckling loads and vibrations of fluid structure systems, 9: 9834 (R;FR)

FLUORIDES

Adsorption
Trapping of gaseous fluoride emissions on solid sorbents, 9: 10650 (RA;US)

FLUORINE

Activation Analysis
Trace element analysis of biological materials: Complementarity of PIXE and NAA, 9: 10342 (J;US)

PIXE Analysis
Large scale study of tooth enamel, 9: 10343 (J;US)
Trace element analysis of biological materials: Complementarity of PIXE and NAA, 9: 10342 (J;US)

Removal
Trapping of gaseous fluoride emissions on solid sorbents, 9: 10650 (RA;US)

FLUORINE CHLORIDES
See CHLORINE FLUORIDES

FLUORINE COMPLEXES

Nuclear Magnetic Resonance
Enhanced nuclear magnetic resonance in a non-magnetic cubic doublet. A study performed with a ^{4}He-circulating dilution refrigerator, 9: 10234 (R;NL)

FLUORINE FLUORIDES
See FLUORINE

FLUORINE IONS

Electron Capture
Radiative electron capture for F^{9+} and F^{9+} ions in collisions with a He gas target, 9: 11041 (J;US)

Ion-Atom Collisions
Projectile charge state dependence of M-shell ionization of Au, Pb, Bi and U by 1.42-MeV/amu fluorine ions, 9: 11027 (J;US)
Radiative electron capture for F^{9+} and F^{9+} ions in collisions with a He gas target, 9: 11041 (J;US)

FLUORS
See PHOSPHORS

FLY ASH

Biological Effects
Effects of metal compounds on chromosome length, 9: 10924 (R;SE)

Chemical Composition
Effects on soil and plants from trace elements in fly ash from coal-fired plants for energy production. A literature study, 9: 9283 (R;SE;In Swedish)
Environmental Impacts
Effects on soil and plants from trace elements in fly ash from coal-fired plants for energy production. A literature study, 9: 9283 (R;SE;In Swedish)
Mutagen Screening
Effects of coal and oil fly ash on sister chromatid exchange (SCE) in a macrophage like cell line, 9: 10923 (R;SE)
Variations in particulate effluent mutagenicity from a coal fired boiler, 9: 9318 (R;SE;In Swedish)
Waste Disposal
Bearing value and settlement of fly ash depositions from pressure metering and cone penetration tests, 9: 9267 (R;SE;In Swedish)

FLYWHEEL ENERGY STORAGE
Computerized Simulation
Peak reducing potential of flywheel storage, 9: 9947 (J;US)
Technology Assessment
Impact of flywheel energy storage technology upon taxicab fleet operation in a large metropolitan city, 9: 10192 (BA;US)

FLYWHEEL-POWERED VEHICLES
Demonstration Programs
Impact of flywheel energy storage technology upon taxicab fleet operation in a large metropolitan city, 9: 10192 (BA;US)

FLYWHEELS
Composite Materials
Characterization of fiber composite flywheels by ultrasonic imaging techniques, 9: 9945 (R;US)
Composite ring-disk flywheel design, fabrication, and testing, 9: 9946 (R;US)
Design
Composite ring-disk flywheel design, fabrication, and testing, 9: 9946 (R;US)
Fabrication
Composite ring-disk flywheel design, fabrication, and testing, 9: 9946 (R;US)
Performance Testing
Composite ring-disk flywheel design, fabrication, and testing, 9: 9946 (R;US)
Ultrasonic Testing
Characterization of fiber composite flywheels by ultrasonic imaging techniques, 9: 9945 (R;US)

FMIT FACILITY
See FMIT LINAC

FMIT LINAC
Linear Accelerator at the Hanford Fusion Materials Irradiation Test Facility.
Cooling Systems
Development of a large lithium coolant system for operation under vacuum, 9: 11294 (R;US)

FOAMS
Use of foaming agents to alleviate liquid loading in Greater Green River TFG wells, 9: 9362 (J;US)

FOCK METHOD
See HARTREE-FOCK METHOD

FOCK SELF-CONSISTENT FIELD
See HARTREE-FOCK METHOD

FOOD
Preservation
Preservation of fresh solid foods by gas exchange. Final report of Phase I, 9: 10138 (R;US)
Radiopasteurization
International status of food irradiation, 9: 10889 (R;NZ)
Radiopreservation
International status of food irradiation, 9: 10889 (R;NZ)
Radiosterilization

Research Programs
Liquid fossil fuel technology. Quarterly technical progress rport, April-June 1983, 9: 9324 (R;US)
Support service to the Office of Oil, Gas, Shale and Coal Liquids. Final report, 9: 9218 (R;US)
Taxes
Support service to the Office of Oil, Gas, Shale and Coal Liquids. Final report, 9: 9218 (R;US)
FOSSIL-FUEL POWER PLANTS
Air Pollution
Emissions from coal combustion and fuel oil combustion, 9: 9266 (R;SE;In Swedish)
Operation disturbances affecting the emission. Frequency-Duration-Level, 9: 9285 (R;SE;In Swedish)
Economic Analysis
Cost and market penetration analysis of selected fossil fueled electric power generating systems. Volume I. Draft final report, 9: 10040 (R;US)
Emission
Emissions from coal combustion and fuel oil combustion, 9: 9266 (R;SE;In Swedish)
Operation disturbances affecting the emission. Frequency-Duration-Level, 9: 9285 (R;SE;In Swedish)
Environmental Effects
Chemistry and visual impact of the plumes from the Four Corners Power Plant and San Manuel Copper smelter. Interim report 4 Apr 79-14 Jan 82, 9: 10669 (R;US)
Conversion to coal: Baltimore Gas and Electric Company, Brandon Shores Generating Station Units 1 and 2, Anne Arundel County, Maryland. Draft environmental impact statement, 9: 9762 (R;US)
Environmental Impacts
Status report: solid waste management, 9: 9316 (R;US)
Fuel Substitution
Coal conversion of the district heating power station in Vasteraas, Sweden, 9: 9764 (BA;US)
On-Line Control Systems
Implementation of distributed process automation systems in power plants, 9: 9760 (RA;DE;In German)
On-Line Measurement Systems
Laboratory and field acceptance performance of CONAC, 9: 9264 (R;US)
Public Opinion
Perceived risk of nuclear and hydro electrical power generation in Colombia. Final report for the period 1 July 1980-31 January 1983, 9: 9969 (R;XA)
Retrofitting
Combustion of coal liquid mixtures (153 references; contains list of 26 plants preparing fuel slurries of various kinds; also list of boiler experiences), 9: 9304 (R;GB)
Conversion to coal: Baltimore Gas and Electric Company, Brandon Shores Generating Station Units 1 and 2, Anne Arundel County, Maryland. Draft environmental impact statement, 9: 9762 (R;US)
Risk Assessment
Perceived risk of nuclear and hydro electrical power generation in Colombia. Final report for the period 1 July 1980-31 January 1983, 9: 9969 (R;XA)
Solid Wastes
Status report: solid waste management, 9: 9316 (R;US)
FOSSILS
Algae
Some aspects of the development of the Vaal Reef uranium-gold carbon seams, Witwatersrand sequence: organic geochemical and microbiological considerations, 9: 9431 (RA;US)
Bacteria
Some aspects of the development of the Vaal Reef uranium-gold carbon seams, Witwatersrand sequence: organic geochemical and microbiological considerations, 9: 9431 (RA;US)
Precambrian Era
Geochemistry and morphology of mineral components from the fossil gold and uranium placers of the Witwatersand, 9: 9429 (RA;US)
FOULING
C Codes
COPDIRC - calculation of particle deposition in reactor coolants, 9: 9790 (R;GB)
FRACTURED FORMATIONS
See FRACTURED RESERVOIRS
FRACTURED RESERVOIRS
Fluid Injection
Physical model of a fractured reservoir, 9: 9734 (R;US)
Geologic Models
Physical model of a fractured reservoir, 9: 9734 (R;US)
Testing
Fractured shale gas reservoir performance study--An offset well interference field test, 9: 9366 (J;US)
FRACTURES
See also HYDRAULIC FRACTURES
Azimuth
Determination of in-situ stress from anelastic strain recovery measurements of oriented core, 9: 9378 (J;US)
Mapping
Alterant geophysical tomography, 9: 10963 (R;US)
Measuring Methods
Determination of in-situ stress from anelastic strain recovery measurements of oriented core, 9: 9378 (J;US)
FRACTURES (BONE)
See BONE FRACTURES
FRANCE
In-Situ Gasification
Research conducted in France into the underground gasification of coal, 9: 9256 (BA;US;FR)
Research Programs
Annual report 1982, 9: 10000 (R;FR)
FREE ELECTRON LASERS
Beam Dynamics
Transverse particle acceleration techniques using lasers and masers, 9: 10500 (J;US)
Kilo Amp Beam Currents
Status of the Lawrence Berkeley Laboratory and the Lawrence Livermore National Laboratory (LLNL) free electron laser (FEL). Revision 1, 9: 10496 (R;US)
RF Systems
The RF system for the Los Alamos free electron laser (FEL), 9: 10520 (J;US)
X Radiation
Proposal for a free electron laser in the x-ray region, 9: 10422 (R;US)
FREEZERS
Compressors
Field testing energy-saving hermetic compressors in residential refrigerators, 9: 10119 (J;US)

Design
Development of freezer-storage facilities at Savoonga, St. Lawrence Island, Alaska. Final report, 9: 10078 (R;US)
Efficiency
Field test of a high efficiency, automatic defrost refrigerator-freezer, 9: 10120 (J;US)
Field Tests
Field test of a high efficiency, automatic defrost refrigerator-freezer, 9: 10120 (J;US)
Manufacturing
The engineering and manufacture of a high efficiency, automatic defrost refrigerator-freezer, 9: 10164 (J;US)
Marketing Research
Field test of a high efficiency, automatic defrost refrigerator-freezer, 9: 10120 (J;US)
Optimization
Field test of a high efficiency, automatic defrost refrigerator-freezer, 9: 10120 (J;US)
Testing
Development of freezer-storage facilities at Savoonga, St. Lawrence Island, Alaska. Final report, 9: 10078 (R;US)
Thermal Efficiency
The engineering and manufacture of a high efficiency, automatic defrost refrigerator-freezer, 9: 10164 (J;US)

FRESH WATER
Chemical Reactions
An algal assay method for determination of copper complexation capacities of natural waters, 9: 10936 (J;US)
Monitoring
Water monitoring program at the Rocky Flats Plant, 9: 10748 (RA;US)

FRESH WATER ECOSYSTEMS
See AQUATIC ECOSYSTEMS

FRM DEVICES (THERMONUCLEAR)
See FIELD-REVERSED MIRROR REACTORS

FTR REACTOR (RICHLAND)
See FFTF REACTOR

FUEL ASSEMBLIES
After-Heat Removal
Pretest predictions for degraded shutdown heat-removal tests in THORS-SHRS Assembly 1 (LMFBR), 9: 9882 (R;US)
Global Analysis
Global optimality analysis of nuclear reactor assemblies with multi-component controllers, 9: 9852 (BA;US)
Reactor Control Systems
Global optimality analysis of nuclear reactor assemblies with multi-component controllers, 9: 9852 (BA;US)
Thermal Stresses
Effects of the core flow distribution on the thermal stress of the fuel block, 9: 9809 (RA;US)

FUEL CANS
Carburization
Transport of carbon in 316 steels submitted to neutron irradiation, 9: 10209 (R;FR;In French)
Deformation
Influence of various stresses on diametral and axial plastic deformations of the Phenix reactor fuel cans, 9: 9813 (R;FR;In French)

FUEL CELLS
See also HYDROGEN FUEL CELLS
NATURAL GAS FUEL CELLS
Comparative Evaluations
Fuel cell propulsion systems for small transportation vehicles, 9: 10051 (J;US)
Fuel cell propulsion systems for large vehicles: buses, freight locomotives, and marinecraft, 9: 10052 (J;US)
Feasibility Studies
Fuel cell propulsion systems for small transportation vehicles, 9: 10051 (J;US)
Fuel cell propulsion systems for large vehicles: buses, freight locomotives, and marinecraft, 9: 10052 (J;US)
Gas Cooling
Evaluation of gas cooling for pressurized phosphoric acid fuel cell stacks, 9: 10050 (J;US)
Heat Recovery
Evaluation of gas cooling for pressurized phosphoric acid fuel cell stacks, 9: 10050 (J;US)
Pressurizing
Evaluation of gas cooling for pressurized phosphoric acid fuel cell stacks, 9: 10050 (J;US)

FUEL COOLING INSTALLATIONS
See SPENT FUEL STORAGE

FUEL CYCLE
Computerized Simulation
ORIGEN2: A versatile computer code for calculating the nuclide compositions and characteristics of nuclear materials, 9: 9829 (J;US)

FUEL CYCLE CENTERS
Radioactive Effluents
Regional and global environmental behaviour of radionuclides from the nuclear fuel cycle. Report of the advisory group meeting on pathways for radionuclide releases of regional and world-wide interest organized by the IAEA held in Vienna, 2-5 June 1981, 9: 10686 (R;XA)

FUEL ELEMENT FAILURE
Study of the U_3O_8-Al thermite reaction and strength of reactor fuel tubes, 9: 9864 (R;US)
Fission Product Release
Analysis of recent fuel disruption experiments, 9: 9934 (BA;FR)
Fuel-Cladding Interactions
Fracture behavior of high-burnup spent-fuel cladding, 9: 9845 (R;US)
Model for the iodine-induced strain rate sensitivity of Zircaloy fuel rod cladding, 9: 9850 (R;US)
Research Programs
Experimental study of defect power reactor fuel. Final report, 9: 9777 (R;SE)

FUEL ELEMENTS
See also FUEL PINS
SPENT FUEL ELEMENTS
Chemical Reactions
Study of the U_3O_8-Al thermite reaction and strength of reactor fuel tubes, 9: 9864 (R;US)
Melting
Transient fuel melting, 9: 9874 (R;FR;In French)

FUEL GAS
See also INTERMEDIATE BTU GAS
LOW BTU GAS
NATURAL GAS
Desulfurization
Coal-gas cleanup facility, 9: 9239 (J;US)

FUEL KERNELS
See FUEL PARTICLES

FUEL MANAGEMENT
Computer Codes
Methods of RECORD, an LWR fuel assembly burnup code, 9: 9847 (R;NO)

FUEL OILS
Combustion
Coal slurries as alternate fuels for oil-designed boilers, 9: 10166 (BA;US)
Combustion Products
Effects of coal and oil fly ash on sister chromatid exchange (SCE) in a macrophage like cell line, 9: 10923 (R;SE)
Mutagenicity tests of flue gas emissions from coal and oil fired plants. Investigation of the cells of Drosophila and mammals, 9: 9317 (R;SE;In Swedish)
Energy Demand
An analysis of industrial demand for natural gas, 9: 9370 (J;GB)
Fuel Substitution
Evolution of Canada's coal-liquid mixture program, 9: 9310 (BA;US)
Maritime Transport
Environmental risks of oil and coal transport at sea. A comparative study., 9: 9284 (R;SE;In Swedish)

FUEL PARTICLES
See also COATED FUEL PARTICLES
Performance
HTGR fuel performance basis, 9: 9848 (RA;US)

Reactivity
Oscillator measurements of the reactivity changes resulting from the irradiation of low enrichment particulate fuel in the Dragon reactor, 9: 9863 (R;GB)

FUEL PENCILS
See FUEL PINS

FUEL PINS
Power Distribution
Determination of local pin powers in the framework of nodal coarse-mesh solutions, 9: 9775 (R;DK)
Welding
Device for direct digitized radiology of small objects, 9: 9835 (R;FR;In French)
X-Ray Radiography
Device for direct digitized radiology of small objects, 9: 9835 (R;FR;In French)

FUEL REPROCESSING PLANTS
See also WEST VALLEY PROCESSING PLANT
Public Relations
Fuel reprocessing: Citizens' questions and experts' answers, 9: 9447 (R;DE;In German)

FUEL SHEATHS
See FUEL CANS

FUEL SLURRIES
Atomization
Vaporization and devolatilization of coal water sprays. Fifth quarterly report for the period ending November 11, 1983, 9: 9303 (R;US)
Burners
Combustion of coal liquid mixtures (153 references; contains list of 26 plants preparing fuel slurries of various kinds; also list of boiler experiences), 9: 9304 (R;GB)
Chemical Preparation
Combustion of coal liquid mixtures (153 references; contains list of 26 plants preparing fuel slurries of various kinds; also list of boiler experiences), 9: 9304 (R;GB)
Combustion
Combustion of coal liquid mixtures (153 references; contains list of 26 plants preparing fuel slurries of various kinds; also list of boiler experiences), 9: 9304 (R;GB)
Combustion Products
Combustion of coal liquid mixtures (153 references; contains list of 26 plants preparing fuel slurries of various kinds; also list of boiler experiences), 9: 9304 (R;GB)
Demonstration Programs
Combustion of coal liquid mixtures (153 references; contains list of 26 plants preparing fuel slurries of various kinds; also list of boiler experiences), 9: 9304 (R;GB)
Devolatilization
Investigation of vaporization and devolatilization of coal/water mixtures. Sixth quarterly report, August 1-October 31, 1983, 9: 9302 (R;US)
Evaporation
Investigation of vaporization and devolatilization of coal/water mixtures. Sixth quarterly report, August 1-October 31, 1983, 9: 9302 (R;US)
Fluidized-Bed Combustion
20 atmosphere rig PFBC test results: Tests 14 and 15, investigations with a coarse coal-water mixture, 9: 10463 (R;US)
Fuel Substitution
Evolution of Canada's coal-liquid mixture program, 9: 9310 (BA;US)
Pumping
Coal slurry pump development. Fossil energy annual summary technical information report, 9: 9224 (R;US)
Pyrolysis
Investigation of vaporization and devolatilization of coal/water mixtures. Sixth quarterly report, August 1-October 31, 1983, 9: 9302 (R;US)
Rheology
Combustion of coal liquid mixtures (153 references; contains list of 26 plants preparing fuel slurries of various kinds; also list of boiler experiences), 9: 9304 (R;GB)
Sprays
Investigation of vaporization and devolatilization of coal/water mixtures. Sixth quarterly report, August 1-October 31, 1983, 9: 9302 (R;US)
Stabilization
Combustion of coal liquid mixtures (153 references; contains list of 26 plants preparing fuel slurries of various kinds; also list of boiler experiences), 9: 9304 (R;GB)

FUEL SUBSTITUTION
Environmental Impacts
Coal conversion: the CH experience, 9: 9985 (RA;US)
Legal Aspects
Coal conversion: the CH experience, 9: 9985 (RA;US)
Research Programs
Evolution of Canada's coal-liquid mixture program, 9: 9310 (BA;US)

FUEL SUSPENSIONS
See FUEL SLURRIES

FUEL USE ACT
See POWER PLANT AND INDUSTRIAL FUEL USE ACT

FUEL-CLADDING INTERACTIONS
Fission Product Release
Application of X ray microanalysis and gamma spectrometry to the study of the behaviour of gaseous and volatile fission products in transient conditions, 9: 9844 (R;FR;In French)

FUELWOOD
See WOOD FUELS

FUMES
See AEROSOLS

FUNCTIONALS
Newton Method
Efficient algorithm for bifurcation problems of variational inequalities, 9: 11393 (J;US)
Nonlinear Problems
Efficient algorithm for bifurcation problems of variational inequalities, 9: 11393 (J;US)

FUNCTIONS
See also ANALYTIC FUNCTIONS
FUNCTIONALS
RETENTION FUNCTIONS
Extrapolation
Anderson-Bjoerck for linear sequences, 9: 11394 (J;US)

FURANS
Radiolysis
Contribution to the study of gamma radiolysis of 2-furyl butyl or substituted phenyl ketones in isopropanol, 9: 10384 (R;FR;In French)

FURNACES
See also GAS FURNACES
Combustion
Oxygen-enriched combustion system utilizing membranes, 9: 10158 (BA;US)
Mathematical Models
Mathematical modelling of the thermal performance of furnaces operating under non-steady state conditions, 9: 10160 (BA;US)
Performance
Mathematical modelling of the thermal performance of furnaces operating under non-steady state conditions, 9: 10160 (BA;US)
Radiant Heat Transfer
Radiation measurement in flames and furnaces, 9: 10394 (BA;US)

G

GADOLINIUM IONS
Electron Spin Resonance
Paramagnetic resonance of Gd^{3+} as a probe of exchange and crystal-field effects in rare-earth-metal pnictides: Antiferromagnetic and diluted materials, 9: 10274 (J;US)
GALAXIES
Large scale inhomogeneities and galaxy statistics, 9: 10975 (R;FR)
GALLIUM ALLOYS
Crystal Growth
Theoretical and experimental study of solid phase miscibility gaps in III/V quaternary alloys. Progress report ($GaAs_{0.5}Sb_{0.5}$), 9: 10292 (R;US)
GALLIUM ARSENIDE SOLAR CELLS
Etching
Ultrathin GaAs and AlGaAs solar cells, 9: 9656 (J;US)
Production
Ultrathin GaAs and AlGaAs solar cells, 9: 9656 (J;US)
Solar Reflectors
Ultrathin GaAs and AlGaAs solar cells, 9: 9656 (J;US)
GALLIUM ARSENIDES
Activation Analysis
Chromium determination in gallium arsenide, 9: 10317 (RA;CS;In Czech)
Crystal Growth
Theoretical and experimental study of solid phase miscibility gaps in III/V quaternary alloys. Progress report ($GaAs_{0.5}Sb_{0.5}$), 9: 10292 (R;US)
Electron Microprobe Analysis
Microanalysis of candidate thin & thick film photovoltaic materials, 9: 9624 (J;US)
Microstructure
Microanalysis of candidate thin & thick film photovoltaic materials, 9: 9624 (J;US)
Roughness
Microanalysis of candidate thin & thick film photovoltaic materials, 9: 9624 (J;US)
GALLIUM COMPLEXES
Chemical Bonds
Thermodynamic binding constants for gallium transferrin, 9: 10388 (J;US)
Thermodynamic Properties
Thermodynamic binding constants for gallium transferrin, 9: 10388 (J;US)
GAMMA DETECTION
Comparative Evaluations
Nondestructive photon analysis of ^{241}Am in soils and sediment utilizing self-absorption corrections, 9: 10340 (J;CH)
Li-Drifted Ge Detectors
Method for improvement of gamma-transition cascade spectra amplitude resolution by computer processing of coincidence codes, 9: 10592 (R;SU;In Russian)
Semiconductor nuclear emission detector using at gamma activation analysis of the environmental objects, 9: 10597 (RA;SU;In Russian)
GAMMA RADIATION
Data Acquisition
Measuring stations for gamma radiation - measured results 1982, 9: 10694 (R;SE;In Swedish, English)
Data Processing
Mathematical modelling for experimental physics data processing, 9: 10593 (RA;HU;In Russian)
Monitoring
Capabilities of the Los Alamos National Laboratory's environmental emergency response vehicle, 9: 10573 (RA;US)
Statistical Models
Mathematical modelling for experimental physics data processing, 9: 10593 (RA;HU;In Russian)
GAMMA SOURCES
For cosmic sources of gamma radiation use COSMIC GAMMA SOURCES.
Radiation Monitoring
Gamma source concentration in atmosphere, 9: 10689 (RA;CS;In Slovak)
GAMMA SPECTRA
Data Processing
Fully computerized system for processing gamma spectra in neutron activation analysis (NAA) of plants and fodders, 9: 10341 (J;US)
GAMMA SPECTROMETERS
See also COMPTON SPECTROMETERS
Calibration Standards
Development of solid radium-226 reference materials, 9: 10313 (R;US)
Data Processing
Automatic control of amplification drift and discrimination threshold in problems of complex γ-spectra processing, 9: 10601 (RA;SU;In Russian)
Four-Pi Counting
New vistas of heavy-ion reactions with the spin spectrometer, 9: 10611 (R;US)
Li-Drifted Ge Detectors
Fast spectrometer on the base of industrial Ge(Li) detector, 9: 10599 (RA;SU;In Russian)
Germanium spectrometers of X-ray and soft γ-radiation, 9: 10603 (RA;SU;In Russian)
Nuclear Instrument Modules
Silicon detectors and modules for X-ray and soft γ-radiation spectrometry, 9: 10600 (RA;SU;In Russian)
Si Semiconductor Detectors
Silicon detectors and modules for X-ray and soft γ-radiation spectrometry, 9: 10600 (RA;SU;In Russian)
Surface Barrier Detectors
Germanium spectrometers of X-ray and soft γ-radiation, 9: 10603 (RA;SU;In Russian)
Uses
New vistas of heavy-ion reactions with the spin spectrometer, 9: 10611 (R;US)
GAMMA SPECTROSCOPY
Data Processing
Automatic treatment of a complex γ spectrum, results of the P.T.I. R12 intercomparison, 9: 10572 (R;FR;In French)
HgI2 Semiconductor Detectors
1984 State of the art of the technology of mercuric iodide x-ray and gamma radiation detectors, 9: 10580 (R;US)
GARCHING IPP
See IPP GARCHING
GAS APPLIANCES
Assessment of gas-fired commercial refrigeration. Final report Mar-Aug 1982, 9: 10079 (R;US)
Evaluation
Computer models for comparative assessment of cost and competitiveness of gas-fired space conditioning systems. Final report Jun 1981-Jun 1982, 9: 10081 (R;US)
Performance
Development of new combustion technology for high performance gas appliances, 9: 10113 (BA;US)
Pulse Combustion
Development of new combustion technology for high performance gas appliances, 9: 10113 (BA;US)
Thermal Efficiency
Commercial cooking equipment improvement. Volume 4. Effects of ventilation on equipment performance. Final report Jul 1982-Feb 1983, 9: 10077 (R;US)
Ventilation
Commercial cooking equipment improvement. Volume 4. Effects of ventilation on equipment performance. Final report Jul 1982-Feb 1983, 9: 10077 (R;US)
GAS BURNERS
Air Pollution Control
The effects of ventilation on residential air pollution due to emissions from a gas-fired range, 9: 10677 (J;GB)
Ceramics
Industrial applications of the radiant ceramic fiber burner, 9: 10467 (BA;US)

Emission
The effects of ventilation on residential air pollution due to emissions from a gas-fired range, 9: 10677 (J;GB)
Indoor Air Pollution
The effects of ventilation on residential air pollution due to emissions from a gas-fired range, 9: 10677 (J;GB)
Performance
Industrial applications of the radiant ceramic fiber burner, 9: 10467 (BA;US)
Testing
High efficiency space heating systems utilizing heat-pipe heat exchangers, 9: 10102 (BA;US)
Waste Heat Utilization
Fully premixed natural gas burners for use in high thermal efficiency domestic boilers, 9: 10101 (BA;US)
Improved utilisation of gaseous fuels: overview of technological developments, 9: 9415 (BA;US)

GAS BURSTS
See ROCK BURSTS

GAS COMPRESSORS
Computerized Simulation
Hydraulic air compression for ocean thermal energy conversion applications, 9: 9692 (BA;US)
Design
Hydraulic air compression for ocean thermal energy conversion applications, 9: 9692 (BA;US)

GAS COOLANTS
See GASES

GAS COOLED REACTORS
See also HTGR TYPE REACTORS
Primary Coolant Circuits
COPDIRC - calculation of particle deposition in reactor coolants, 9: 9790 (R;GB)

GAS ENGINES
See INTERNAL COMBUSTION ENGINES

GAS FUELS
See also FUEL GAS
Calorific Value
Solar gasification of carbonaceous materials, 9: 9541 (J;GB)
Constraints
Assessment of institutional barriers to the use of natural gas in automotive vehicle fleets, 9: 10130 (R;US)
Institutional Factors
Assessment of institutional barriers to the use of natural gas in automotive vehicle fleets, 9: 10130 (R;US)
Safety
Gaseous fuel safety assessment for light-duty automotive vehicles, 9: 10196 (R;US)

GAS FURNACES
Evaluation
Technology for improved energy utilization in metal heat-treating operations, 9: 10137 (R;US)
Heat Recovery Equipment
High-temperature flue gas heat recovery system, 9: 10159 (BA;US)
Performance
Noise emission from industrial high velocity gas burners, 9: 10157 (BA;US)
Testing
High efficiency space heating systems utilizing heat-pipe heat exchangers, 9: 10102 (BA;US)

GAS GENERATORS
Mathematical Models
Mathematical modelling of an entrained coal gasifier, 9: 9241 (BA;US)

GAS HEAT PUMPS
Absorption
Development of a residential gas absorption heat pump, 9: 10084 (J;US)
Absorption Refrigeration Cycle
Columbia's gas heat pump. Progress report, 9: 10092 (BA;US)
Development of a residential gas absorption heat pump, 9: 10093 (BA;US)
Investigation of working fluids for gas-fired absorption plants, 9: 10097 (BA;US)
Design
Columbia's gas heat pump. Progress report, 9: 10092 (BA;US)
Mathematical Models
Detailed calculation model of a compression heat pump, 9: 10094 (BA;US)
Working Fluids
Investigation of working fluids for gas-fired absorption plants, 9: 10097 (BA;US)

GAS HYDRATES
Dissociation Heat
Calorimetric studies of clathrate hydrates (Tetrahydrofuran, ethylene oxide and cyclopropane hydrates), 9: 9406 (BA;US)
Phase Diagrams
Calorimetric studies of clathrate hydrates (Tetrahydrofuran, ethylene oxide and cyclopropane hydrates), 9: 9406 (BA;US)
Resource Potential
Methane hydrate gas production: evaluating and exploiting the solid gas resource, 9: 9359 (BA;US)
Specific Heat
Calorimetric studies of clathrate hydrates (Tetrahydrofuran, ethylene oxide and cyclopropane hydrates), 9: 9406 (BA;US)

GAS LASERS
See also CARBON DIOXIDE LASERS
Design
Tunable VUV light generation for the low-level resonant ionization detection of krypton, 9: 10337 (J;US)
Reviews
Development of CO_2 and KrF gas lasers as drivers for inertial confinement fusion, 9: 11317 (R;US)

GAS ODORIZATION
See ODORIZATION

GAS SPILLS
Explosions
Coyote series data report LLNL/NWC 1981 LNG spill tests dispersion, vapor burn, and rapid-phase-transition. Volume 1 (7 experiments with liquefied natural gas, 2 with liquid methane, and one with liquid nitrogen), 9: 9373 (R;US)
Field Tests
Coyote series data report LLNL/NWC 1981 LNG spill tests dispersion, vapor burn, and rapid-phase-transition. Volume 1 (7 experiments with liquefied natural gas, 2 with liquid methane, and one with liquid nitrogen), 9: 9373 (R;US)

GAS TUNGSTEN-ARC WELDING
Acoustic Monitoring
Evaluation of acoustic emission weld monitoring for coal gasification vessels. Final report, September 1979-March 1982, 9: 9222 (R;US)

GAS UTILITIES
Occupational Safety
DVGW annual report '82, 9: 9989 (R;DE;In German)
Operating Cost
Statistics of interstate natural gas pipeline companies, 1982, 9: 9383 (R;US)

GAS WELLS
See NATURAL GAS WELLS

GASES
See also ELECTRON GAS and FERMI GAS.
See also AIR
FUEL GAS
RARE GASES
SHALE GAS
Critical Velocity
Critical ionization velocity mechanism for the case of gas mixture, 9: 11238 (R;SE)
Diffusion
Mound activities in chemical and physical research: January-June 1983, 9: 9527 (R;US)
Electric Discharges
Avalanches in insulating gases, 9: 11005 (R;NL)
Ionization
Critical ionization velocity mechanism for the case of gas mixture, 9: 11238 (R;SE)
Saturation
Transient saturator performance, 9: 10433 (J;US)

GASOHOL
Previous to August, 1979 this concept was indexed as gasoline AND mixtures AND ethanol or methanol.

Economics
Single/total-economy aspects of production and utilization of energy from renewable raw materials, 9: 9551 (RA;AT;In German)

GASOLINE
Consumption Rates
Household impacts of gasoline decontrol, 9: 9980 (R;US)

GASOLINE ENGINES
See INTERNAL COMBUSTION ENGINES

GASTROINTESTINAL TRACT
Biological Radiation Effects
Treatment of radiation damage of gastrointestinal tract, 9: 10866 (RA;CS;In Czech)
Post-Irradiation Therapy
Treatment of radiation damage of gastrointestinal tract, 9: 10866 (RA;CS;In Czech)
Radionuclide Kinetics
Can information on the gastrointestinal absorption of actinide elements by neonatal rats, guinea pigs, dogs and swine be extrapolated to man?, 9: 10902 (J;GB)

GE SEMICONDUCTOR DETECTORS
See also LI-DRIFTED GE DETECTORS
Design
Status of the Battelle-Carolina ^{76}Ge double beta decay experiment, 9: 10613 (R;US)

GE(LI) DETECTORS

Gravitational Fields
Proper time, spatial distances and clock synchronization in the locally anisotropic space-time, 9: 11174 (R;SU)
Space-Time
Proper time, spatial distances and clock synchronization in the locally anisotropic space-time, 9: 11174 (R;SU)

GENERATORS (STEAM)
See STEAM GENERATORS

GENES
Electrophoresis
Comparative mutagenesis of human cells in vitro and in vivo. Progress report and financial statement, 9: 10768 (R;US)
Recombinant DNA
Quantitative and molecular analyses of mutation in a pSV2gpt transformed CHO cell line, 9: 10843 (R;US)

GENITALS (FEMALE)
See FEMALE GENITALS

GENOTYPE
Evaluation
How does the extracellular matrix direct gene expression?, 9: 10789 (J;GB)

GEOCHEMICAL SURVEYS
Determination of elemental composition in geochemical exploration using a 14-MeV neutron generator, 9: 10490 (J;US)
Determination of elemental composition in geochemical exploration using a 14-MeV neutron generator 11. Theoretical aspects, 9: 10491 (J;US)

GEOCHEMISTRY
Earth Sciences Division annual report, 1982, 9: 9729 (R;US)

GEOLOGIC DEPOSITS
See also COAL DEPOSITS
NATURAL GAS DEPOSITS
OIL SHALE DEPOSITS
PETROLEUM DEPOSITS
SALT DEPOSITS
URANIUM DEPOSITS
Exploration
Potential for the application of nuclear techniques in selected developing countries in Africa, 9: 10960 (R;GB)

GEOPHYSICS
Earth Sciences Division annual report, 1982, 9: 9729 (R;US)

GEOPRESSURED SYSTEMS
Resource Development
Unconventional gas: recent R and D advances, 9: 9380 (BA;US)

GEOTHERMAL AREAS
See GEOTHERMAL FIELDS

GEOTHERMAL DISTRICT HEATING
Institutional Factors
Groundwater and geothermal: urban district heating applications, 9: 9743 (R;US)

GEOTHERMAL ENERGY
Economic Analysis
Designing cost accounting models for biomass energy systems and direct applications of geothermal energy, 9: 9658 (BA;US)
Mathematical Models
Designing cost accounting models for biomass energy systems and direct applications of geothermal energy, 9: 9658 (BA;US)
Public Opinion
Nuclear risk assessment and public acceptance. Final report for the period 1 December 1979-30 November 1982, 9: 9968 (R;XA)
Risk Assessment
Nuclear risk assessment and public acceptance. Final report for the period 1 December 1979-30 November 1982, 9: 9968 (R;XA)

GEOTHERMAL ENERGY CONVERSION
Binary-Fluid Systems
Condensation of R-11 on the outside of vertical enhanced tubes, 9: 9737 (BA;US)

GEOTHERMAL FIELDS
See also EAST MESA GEOTHERMAL FIELD
Fluid Injection
Hydrothermal Injection Research Program. Annual progress report, FY 1983, 9: 9738 (R;US)
Lithology
Discovery and geology of the Desert Peak geothermal field: a case history. Bulletin 97, 9: 9731 (R;US)
Stratigraphy
Discovery and geology of the Desert Peak geothermal field: a case history. Bulletin 97, 9: 9731 (R;US)

GEOTHERMAL FLUIDS
Mass Transfer
Nonisothermal effects during injection and fall-off tests, 9: 9741 (J;US)

GEOTHERMAL HEATING
See also GEOTHERMAL DISTRICT HEATING
GEOTHERMAL SPACE HEATING
GEOTHERMAL WATER HEATING
Direct utilization of geothermal energy in western South Dakota agribusiness. Final report, 9: 9742 (R;US)

GEOTHERMAL POWER PLANTS
Binary-Fluid Systems
Review of shell-and-tube heat exchanger fouling and corrosion in geothermal power plant service, 9: 9736 (R;US)
Heat Exchangers
Review of shell-and-tube heat exchanger fouling and corrosion in geothermal power plant service, 9: 9736 (R;US)

GEOTHERMAL REGIONS
See GEOTHERMAL FIELDS

GEOTHERMAL RESOURCES
Grants
Report to the Legislature on the California Energy Commission's Geothermal Development Grant Program for Local Governments, 9: 9733 (R;US)
Program Management
Report to the Legislature on the California Energy Commission's Geothermal Development Grant Program for Local Governments, 9: 9733 (R;US)
Resource Development
Report to the Legislature on the California Energy Commission's Geothermal Development Grant Program for Local Governments, 9: 9733 (R;US)

GEOTHERMAL SPACE HEATING
Direct utilization of geothermal energy in western South Dakota agribusiness. Final report, 9: 9742 (R;US)

GEOTHERMAL WATER HEATING
Use for domestic water heating; for industrial application use GEOTHERMAL PROCESS HEAT.
Direct utilization of geothermal energy in western South Dakota agribusiness. Final report, 9: 9742 (R;US)

GEOTHERMAL WELLS
Computerized Simulation
The impact of common completion and workover activities on the effective costs of geothermal wells, 9: 9740 (J;US)
Cost
The impact of common completion and workover activities on the effective costs of geothermal wells, 9: 9740 (J;US)
Fluid Injection
Nonisothermal effects during injection and fall-off tests, 9: 9741 (J;US)
Hydraulic Fracturing
The impact of common completion and workover activities on the effective costs of geothermal wells, 9: 9740 (J;US)
Operation
The impact of common completion and workover activities on the effective costs of geothermal wells, 9: 9740 (J;US)
Pressure Drop
Nonisothermal effects during injection and fall-off tests, 9: 9741 (J;US)
Well Completion
The impact of common completion and workover activities on the effective costs of geothermal wells, 9: 9740 (J;US)
Well Drilling
Program for the improvement of downhole drilling motors, 9: 9739 (R;US)
The impact of common completion and workover activities on the effective costs of geothermal wells, 9: 9740 (J;US)
GERMAN FEDERAL REPUBLIC
See FEDERAL REPUBLIC OF GERMANY
GERMANIUM
Physical Radiation Effects
Efficiency of radiation defect formation in n- and p-germanium doped with nickel and palladium, 9: 10235 (RA;SU;In Russian)
Nature of radiation induced defects that cause the 0.52 ev IR absorption band in germanium, 9: 10236 (RA;SU;In Russian)
GERMANIUM 76
Double Beta Decay
Status of the Battelle-Carolina ^{76}Ge double beta decay experiment, 9: 10613 (R;US)
GERMANIUM ALLOYS
Point Defects
Cascade collision simulation and point defect configuration in the intermetallic compounds (Nb_3Sn, V_3Si, Nb_3SGe), 9: 10237 (RA;SU;In Russian)
GERMANIUM DETECTORS
See GE SEMICONDUCTOR DETECTORS
GERMANIUM FLUORIDES
Complexes
Reversible intercalation of graphite by fluorine and related synthetic and thermodynamic studies, 9: 10297 (R;US)
GERMANY (FEDERAL REPUBLIC)
See FEDERAL REPUBLIC OF GERMANY
GETTERS
Materials used for the purification of vacuum atmospheres; see also the specific materials.
Performance
Experience with Zr-Al getter pumps in the ISX-B tokamak, 9: 11265 (R;US)
GIANT CELLS
See TUMOR CELLS
GIANT RESONANCE
Strength Functions
El strength function at high spin and excitation energy, 9: 11140 (R;FR)
GINZBURG-LANDAU THEORY
Critical field of an SNS junction, 9: 10401 (R;US)
GLASS
See also BOROSILICATE GLASS
Glasses used for the high level radioactive wastes storage, 9: 9458 (R;FR;In French)
Chemical Composition
Fluoride glass compositions, 9: 10306 (P;US)
Fracture Properties
Mechanical properties of some candidate glasses for high-level radioactive waste management, 9: 9459 (R;FR)
Leaching
Long-term performance of materials used for high-level waste packaging. Second quarterly report, year two, July 1983-September 1983. Volume 2, 9: 9484 (R;US)
Mechanical Tests
Mechanical properties of some candidate glasses for high-level radioactive waste management, 9: 9459 (R;FR)
GLASS MELTERS
See CERAMIC MELTERS
GLASSY METALS
See METALLIC GLASSES
GLAZING MATERIALS
Transparent or translucent materials such as glass or glass substitutes.
Polymers
Solar Thermal Technology Program: polymer synthesis and characterization subtask. Annual progress report, FY 1983, 9: 9723 (R;US)
Weathering
Solar Thermal Technology Program: polymer synthesis and characterization subtask. Annual progress report, FY 1983, 9: 9723 (R;US)
GLUCOSE
Fermentation
Kinetic study of ethanol production by Zymomonas mobilis, 9: 9558 (R;US)
GLUTAMIC ACID
Membrane Transport
Characterization and isolation of a light driven sodium pump from membranes of Halobacterium halobium. Final technical progress report, 9: 10767 (R;US)
GLYCINE HISPIDA
Proteins
An analysis of mRNAs for a group of heat shock proteins of soybean using cloned cDNAs, 9: 10776 (J;US)
GLYCOLS
Biochemical Reaction Kinetics
Dose-dependent disposition of ethylene glycol in the rat after intravenous administration, 9: 10940 (J;US)
Biological Effects
Dose-dependent disposition of ethylene glycol in the rat after intravenous administration, 9: 10940 (J;US)
GNEISSES
Fracturing
CSM/OCRD hard rock test facility at the CSM experimental mine, Idaho Springs, Colorado (Granitic gneiss), 9: 10964 (R;US)
Permeability
CSM/OCRD hard rock test facility at the CSM experimental mine, Idaho Springs, Colorado (Granitic gneiss), 9: 10964 (R;US)
GOBAR GAS
See INTERMEDIATE BTU GAS
METHANE
GOLD
Activation Analysis
Trace element analysis of biological materials: Complementarity of PIXE and NAA, 9: 10342 (J;US)
Charge State
Projectile charge state dependence of M-shell ionization of Au, Pb, Bi and U by 1.42-MeV/amu fluorine ions, 9: 11027 (J;US)
Inner-Shell Ionization
Projectile charge state dependence of M-shell ionization of Au, Pb, Bi and U by 1.42-MeV/amu fluorine ions, 9: 11027 (J;US)
Ion-Atom Collisions
Fundamental aspects of laser and ion-beam interactions with solid surfaces, 9: 11002 (R;NL)
Influence of the nuclear reaction time onto the delta-electron emission studied by the reaction J → Au,Bi at 795 and 840 MeV, 9: 10999 (RA;DE;In German)
Projectile charge state dependence of M-shell ionization of Au, Pb, Bi and U by 1.42-MeV/amu fluorine ions, 9: 11027 (J;US)

Study of binding energies and electron densities in superheavy quasiatoms by means of delta-ray spectroscopy, 9: 11000 (RA;DE;In German)
PIXE Analysis
Trace element analysis of biological materials: Complementarity of PIXE and NAA, 9: 10342 (J;US)
GOLD 197 TARGET
Alpha Reactions
Complete and incomplete fusion in transition energy range, 9: 11137 (R;FR;In French)
Oxygen 16 Reactions
Formation and decay of a localized region of high excitation in heavy-ion—induced reactions, 9: 11138 (J;US)
Proton Reactions
Charge exchange (p,n) reactions to the isobaric analog states of high Z nuclei: 73< or =Z< or =92, 9: 11134 (J;US)
GOLD COMPOUNDS
Chemical Reaction Kinetics
Genesis of uranium-gold pyritic conglomerates, 9: 9441 (RA;US)
GOLD IONS
Ion-Atom Collisions
Study of binding energies and electron densities in superheavy quasiatoms by means of delta-ray spectroscopy, 9: 11000 (RA;DE;In German)
GOLD ORES
Age Estimation
Geochemical studies on the origin of the detrital pyrites in the conglomerates of the Witwatersrand Goldfields, South Africa, 9: 10969 (RA;US)
Uraniferous constituents of the Witwatersrand conglomerates: ore-microscopic observations and implications for the Witwatersrand metallogeny, 9: 9430 (RA;US)
Alluvial Deposits
Examples that illustrate sedimentological aspects of the proterozoic placer model on the Kaap-Vaal Craton, Witwatersrand, South Africa, 9: 9424 (RA;US)
Chemical Composition
Genesis of uranium-gold pyritic conglomerates, 9: 9441 (RA;US)
Geochemical studies on the origin of the detrital pyrites in the conglomerates of the Witwatersrand Goldfields, South Africa, 9: 10969 (RA;US)
Geochemistry
Genesis of uranium-gold pyritic conglomerates, 9: 9441 (RA;US)
Geochemical studies on the origin of the detrital pyrites in the conglomerates of the Witwatersrand Goldfields, South Africa, 9: 10969 (RA;US)
Geological Surveys
Uraniferous quartz-pebble conglomerates in South Africa, 9: 9423 (RA;US)
Grain Size
Geochemical studies on the origin of the detrital pyrites in the conglomerates of the Witwatersrand Goldfields, South Africa, 9: 10969 (RA;US)
Hydrothermal Synthesis
Examples of possible movement of gold in solution in the Witwatersrand, Ventersdorp, and Transvaal systems, 9: 10956 (RA;US)
Metamorphism
Geochemical studies on the origin of the detrital pyrites in the conglomerates of the Witwatersrand Goldfields, South Africa, 9: 10969 (RA;US)
Mineralogy
Geochemistry and morphology of mineral components from the fossil gold and uranium placers of the Witwatersand, 9: 9429 (RA;US)
Thorianite from the Hogatza Placer, Alaska, 9: 9440 (RA;US)
Scanning Electron Microscopy
Geochemistry and morphology of mineral components from the fossil gold and uranium placers of the Witwatersand, 9: 9429 (RA;US)
Stratigraphy
Dominion reef group, Western Transvaal, South Africa, 9: 9425 (RA;US)
X-Ray Diffraction
Geochemistry and morphology of mineral components from the fossil gold and uranium placers of the Witwatersand, 9: 9429 (RA;US)
GRADED BAND GAP SOLAR CELLS
See CASCADE SOLAR CELLS
GRAFT-HOST REACTION
Biological Radiation Effects
Long-term inhibition of immunological reactivity of X-irradiated mice and its possible stimulation by thymus shielding during irradiation, 9: 10867 (RA;CS;In Czech)
GRAIN ALCOHOL
See ETHANOL
GRAIN BOUNDARIES
Recombination
Enhanced diffusion of phosphorus at grain boundaries, 9: 9645 (J;US)
GRANITES
Mineralization
Radioactive disequilibria in mineralised drill core samples from the Bjoerklund uranium occurence, northern Sweden, 9: 9490 (R;SE)
Radionuclide Migration
Engineering Test Plan for field radionuclide migration experiments in Climax granite: peer review documentation, 9: 9515 (R;US)
Radionuclide transport in a single fissure. A laboratory study, 9: 10717 (R;SE)
Sorptive Properties
Diffusion in crystalline rocks of some sorbing and nonsorbing species, 9: 9489 (R;SE)
GRANTS
Midwest Appropriate Technology Small Grants Program project summaries, 9: 9977 (R;US)
Program Management
Midwest Appropriate Technology Small Grants Program: management analysis, 9: 9999 (R;US)
GRAPHITE
Clathrates
Reversible intercalation of graphite by fluorine and related synthetic and thermodynamic studies, 9: 10297 (R;US)
Deformation
Analytical study of stress and deformation of HTR fuel blocks, 9: 9806 (RA;US)
Mechanical Properties
Bowing test of HTGR graphite sleeve - out of pile heating experiment, 9: 9808 (RA;US)
Studies on mechanical properties of graphites for HTGR, 9: 9802 (RA;US)
Oxidation
Graphite oxidation in HTGR atmosphere, 9: 9801 (RA;US)
Stresses
Analytical study of stress and deformation of HTR fuel blocks, 9: 9806 (RA;US)
GRAPHITE MODERATOR
See GRAPHITE
GREAT BRITAIN
See UNITED KINGDOM
GREENHOUSES
See also ATTACHED GREENHOUSES
Unglazed Solar Collectors
Internal solar collectors for greenhouses, 9: 9706 (R;SE;In Swedish, English)
GREENLAND
Hydroelectric Power
List of reports, etc. on hydroelectric power investigations in Greenland as of June 30, 1983, 9: 9561 (R;DK;In Danish)
GROUND MOTION
Calibration
Determination of seismic reference motions on nuclear sites in France, 9: 9876 (R;FR;In French)
GROUND SUBSIDENCE
Environmental Effects
Subsidence in coastal Louisiana: causes, rates, and effects on wetlands, 9: 10727 (R;US)

GROUND WATER
Corrosive Effects
Long-term performance of materials used for high-level waste packaging. Second quarterly report, year two, July 1983-September 1983. Volume 2, 9: 9484 (R;US)
Fluid Flow
Radioisotope tracer application in surface and groundwater flow measurements. Final report for the period 1 January 1979 - 30 September 1982, 9: 10953 (R;XA;In Russian)
Isotope Dating
Research within the coordinated programme on comparison of methods of "age" determination of ground water based on decay of long-lived radioisotopes, especially 32-Si. Final report for the period 1 June 1979 - 31 January 1982, 9: 10954 (R;XA)
Monitoring
Oak Ridge Y-12 Plant groundwater monitoring and assessment program, 9: 10735 (RA;US)
Radiation Monitoring
Groundwater monitoring in the Savannah River Plant low-level waste burial ground: a summary and interpretation of the analytical data, 9: 9514 (R;US)
Radioactive Tracer Logging
Radioisotope tracer application in surface and groundwater flow measurements. Final report for the period 1 January 1979 - 30 September 1982, 9: 10953 (R;XA;In Russian)
Radiochemical Analysis
Groundwater monitoring in the Savannah River Plant low-level waste burial ground: a summary and interpretation of the analytical data, 9: 9514 (R;US)
Radiolysis
Long-term performance of materials used for high-level waste packaging. Second quarterly report, year two, July 1983-September 1983. Volume 2, 9: 9484 (R;US)
Movement of a redox front downstream from a repository for nuclear waste, 9: 10716 (R;SE)
Radionuclide Migration
Groundwater monitoring in the Savannah River Plant low-level waste burial ground: a summary and interpretation of the analytical data, 9: 9514 (R;US)
Radiological protection aspects of shallow land burial of PWR operating wastes, 9: 9518 (R;GB)
Radiological assessment. A textbook on environmental dose analysis, 9: 10691 (R;US)
Spent fuel cladding containment credit test, 9: 9478 (R;US)
Water Chemistry
Hydrologic effects of storing liquified sewage sludge on strip-mined land, Fulton County, Illinois, 9: 10744 (R;US)
Water Pollution
Monitoring for organic contaminants in ground water, 9: 10734 (RA;US)
Water Pollution Control
Onsite treatment of volatile organic compounds in groundwater, 9: 10739 (R;US)
Water Tables
Hydrologic effects of storing liquified sewage sludge on strip-mined land, Fulton County, Illinois, 9: 10744 (R;US)
GROUND-EFFECT MACHINES
See AIR CUSHION VEHICLES
GROUND-WATER RESERVES
See AQUIFERS
GUANINE
Alkylation
Mutagenic properties of O^6-methylguanine in DNA in vivo and in vitro, 9: 10764 (R;US)
GULF OF MEXICO
Continental Shelf
Gulf of Mexico summary report, 9: 9327 (R;US)
Natural Gas Deposits
Gulf of Mexico summary report, 9: 9327 (R;US)
Natural Gas Fields
Gulf of Mexico summary report, 9: 9327 (R;US)
Oil Fields
Gulf of Mexico summary report, 9: 9327 (R;US)

HANFORD RESERVATION
Radiation Monitoring
Master schedule for CY-1984 Hanford environmental surveillance routine sampling program, 9: 10692 (R;US)
Radioactive Waste Management
Standards for concentrations of radionuclides in soil: basis and implementation, 9: 11154 (RA;US)
HARRIS-1 REACTOR
Reactor Safety
Safety evaluation report related to the operation of Shearon Harris Nuclear Power Plant, Units 1 and 2. Docket Nos. STN 50-400 and STN 50-401, 9: 9903 (R;US)
HARRIS-2 REACTOR
Reactor Safety
Safety evaluation report related to the operation of Shearon Harris Nuclear Power Plant, Units 1 and 2. Docket Nos. STN 50-400 and STN 50-401, 9: 9903 (R;US)
HARTREE APPROXIMATION
See HARTREE-FOCK METHOD
HARTREE-FOCK METHOD
Time Dependence
Quantum mechanical derivation of 'collision terms' in the time dependent Hartree-Fock equations, 9: 11172 (RA;DE;In German)
HARVESTING EQUIPMENT
Fuel Consumption
Study on cost of machine use in forestry. Proposing fuel consumption as cost determinant, 9: 9613 (R;SE;In Egnlish)
HASTELLOY X
Carburization
Creep properties of Hastelloy X in a carburizing helium environment, 9: 9794 (RA;US)
Chemical Composition
Materials performance at high temperatures and pressures in simulated coal gasification atmospheres, 9: 9245 (BA;US)
Corrosion
Materials performance at high temperatures and pressures in simulated coal gasification atmospheres, 9: 9245 (BA;US)

Creep
Creep properties of Hastelloy X in a carburizing helium environment, 9: 9794 (RA;US)
Long term creep behavior of Incoloy 800H and Hastelloy X in simulated HTGR environments, 9: 9793 (RA;US)
Fatigue
Effects of HTGR helium on the high cycle fatigue of structural materials, 9: 9797 (RA;US)
HAWAII
Energy Extension Service
Hawaii Non-Pilot States Program for the National Energy Extension Service. Final report, 9: 10055 (R;US)
HAYNES 188 ALLOY
Chemical Composition
Materials performance at high temperatures and pressures in simulated coal gasification atmospheres, 9: 9245 (BA;US)
Corrosion
Materials performance at high temperatures and pressures in simulated coal gasification atmospheres, 9: 9245 (BA;US)
HAYNES ALLOYS
Comparative Evaluations
Properties and performance of candidate structural metals for the production of synthetic gas from coal, 9: 9248 (BA;US)
Corrosion
Erosion-corrosion of structural materials in a simulated coal gasification environment, 9: 9244 (BA;US)
Properties and performance of candidate structural metals for the production of synthetic gas from coal, 9: 9248 (BA;US)
Erosion
Properties and performance of candidate structural metals for the production of synthetic gas from coal, 9: 9248 (BA;US)
HAYNES STELLITE 6B
Chemical Composition
Materials performance in coal gasification environments, 9: 9246 (BA;US)
Corrosion
Materials performance in coal gasification environments, 9: 9246 (BA;US)
HAZARDOUS MATERIALS
Not for radioactive materials.
Anaerobic Digestion
Anaerobic technology - hazardous wastes, 9: 9987 (R;US)
Waste Disposal
Feasibility of in situ solidification/stabilization of landfilled hazardous wastes. Final report Nov 81- Mar 82, 9: 10724 (R;US)
Panel discussion: hazardous waste management, 9: 10028 (RA;US)
Technologies and management strategies for hazardous waste control. Summary report, 9: 9994 (R;US)
Waste Management
Assessment of DOE inactive chemical waste sites: are adequate inventory data available, 9: 10722 (RA;US)
HB ROBINSON-2
See ROBINSON-2 REACTOR
HCDA

Computerized Simulation
Aquifer seasonal energy storage: results and simulations of moderate temperature field experiments, 9: 9950 (J;US)
Evaluation
Performance of a cylindrical phase-change thermal energy storage unit, 9: 9951 (J;US)
Field Tests
Aquifer seasonal energy storage: results and simulations of moderate temperature field experiments, 9: 9950 (J;US)
Legal Aspects
Extracting heat from and storing heat in ground and water. Legal aspects, 9: 9949 (R;SE;In Swedish)
Tanks
Performance of a cylindrical phase-change thermal energy storage unit, 9: 9951 (J;US)

HEAT STORAGE DEVICES
See THERMAL ENERGY STORAGE EQUIPMENT

HEAT STORAGE SYSTEMS
See THERMAL ENERGY STORAGE EQUIPMENT

HEAT TRANSFER
Heat transfer in oscillatory flow. Progress report, January 1983-December 1983, 9: 10425 (R;US)

HEAT TRANSFER PROPERTIES
See THERMODYNAMIC PROPERTIES

HEAT TRANSMISSION
See HEAT TRANSFER

HEATED EFFLUENTS
See THERMAL EFFLUENTS

HEATING SYSTEMS
See also SOLAR HEATING SYSTEMS
Economic Analysis
Analysis of hybrid residential heating systems on the basis of cost and life cycle cost efficiencies, 9: 10099 (BA;US)
Efficiency
Low temperature central heating, 9: 10103 (BA;US;FR)
Operating performances of two heating systems including condensing boilers or recuperators, 9: 10104 (BA;US;FR)
Fuel Substitution
Survey of alternative fuels for residential and commercial space heating. Final report, 9: 10061 (R;US)
Gas Burners
Fully premixed natural gas burners for use in high thermal efficiency domestic boilers, 9: 10101 (BA;US)
Life-Cycle Cost
Analysis of hybrid residential heating systems on the basis of cost and life cycle cost efficiencies, 9: 10099 (BA;US)
Operation
Operating performances of two heating systems including condensing boilers or recuperators, 9: 10104 (BA;US;FR)
Performance
Customer preference and response to the indoor environment with gas space heating systems, 9: 10107 (BA;US)
Thermal Comfort
Low temperature central heating, 9: 10103 (BA;US;FR)

HEAVY ION ACCELERATORS
Includes combined accelerator types for heavy ion acceleration.
See also UNILAC
VICKSI
Colliding Beams
Accelerating heavy ions in Fermilab, 9: 10509 (R;US)
Neutron Dosimetry
Neutron dose equivalent rates due to heavy ion beams, 9: 11155 (R;FR)
Particle Boosters
Heidelberger heavy ion postaccelerator, 9: 10480 (RA;DE;In German)
Shielding
Shielding considerations for multi-GeV/nucleon heavy ion accelerators: the introduction of a new heavy ion transport code, HIT, 9: 10517 (R;US)

HEAVY ION REACTIONS
See also ARGON 40 REACTIONS

SULFUR 32 REACTIONS
Fusion Reactions
Fast fission phenomena, 9: 11141 (R;FR)
Quasi-Elastic Scattering
Several applications of the DWBA diffractional model of quasi-elastic reactions induced by heavy ions, 9: 11128 (R;FR)

HEAVY IONS
Whenever possible use one of the more specific terms listed under ION BEAMS.
Ion Beams
Heavy ion nuclear tracks - An emerging technology, 9: 10547 (J;US)
Ion Detection
Pulse height response of Cd-Te to heavy ions, 9: 10619 (J;US)
RBE
Biological effectiveness and application of heavy ions in radiation therapy described by a physical and biological model, 9: 10806 (R;DK)

HEAVY LIQUID BUBBLE CHAMBERS
Data Processing
Some methodical problems of processing data from one meter propane bubble chamber, 9: 10586 (R;SU;In Russian)
Some methodical problems of processing events with V^0-particles in the propane bubble chamber exposed to carbon nuclei, 9: 10587 (R;SU;In Russian)

HEAVY OILS
See PETROLEUM

HECTOR REACTOR
Pile Oscillation Techniques
Oscillator measurements of the reactivity changes resulting from the irradiation of low enrichment particulate fuel in the Dragon reactor, 9: 9863 (R;GB)
HELICOPTERS
Studies on the use of helicopters for oil spill clearance, 9: 9344 (R;US)
HELIUM
Atom-Molecule Collisions
Influence of collisions with noble gases on spectral lines of hydrogen isotopes, 9: 11006 (R;NL)
Ion Mobility
Derivation of the Li^+-He interaction potential from mobility data, 9: 11008 (RA;AU)
Ion-Atom Collisions
Calculation of double differential cross section for fast ion and electron impact ionization of atoms, 9: 11039 (J;US)
Derivation of the Li^+-He interaction potential from mobility data, 9: 11008 (RA;AU)
Radiative electron capture for F^{9+} and F^{9+} ions in collisions with a He gas target, 9: 11041 (J;US)
Two accel/decel experiments: electron capture for 6 to 20 MeV S^{10}-$^{16+}$ on He and Ar and interference effects in MO K x-ray spectra for 5, 10, and 20 MeV Cl^{16+} on Ar, 9: 10989 (R;US)
Vacuum ultraviolet emission following impact of Li^+ and He^+ on He and Ne at 5-30 keV, 9: 11022 (J;US)
Ionization
Calculation of double differential cross section for fast ion and electron impact ionization of atoms, 9: 11039 (J;US)
Thermal Conductivity
Mound activities in chemical and physical research: January-June 1983, 9: 9527 (R;US)
HELIUM 4 REACTIONS
See ALPHA REACTIONS
HELIUM 4 TARGET
Neutron Reactions
Analog giant resonance excitation via the (n,p) reactions, 9: 11127 (J;US)
HELIUM DILUTION REFRIGERATORS
Enhanced nuclear magnetic resonance in a non-magnetic cubic doublet. A study performed with a ^{4}He-circulating dilution refrigerator, 9: 10234 (R;NL)
HELIUM II
The phase of liquid helium-4 which is stable at temperatures between absolute zero and the lambda point (about 2.2 K).
Breakdown
Radiation-induced electrical breakdown of helium in fusion reactor superconducting magnet systems, 9: 11339 (R;US)
Radiation Effects
Radiation-induced electrical breakdown of helium in fusion reactor superconducting magnet systems, 9: 11339 (R;US)
HELIUM IONS
Collisions
Energy straggling of helium ions in aluminum, 9: 11018 (J;US)
Electron Capture
Charge transfer of 0.8 MeV/u H^+, He^+ in various hydrocarbon gases, 9: 11032 (J;US)
Energy Losses
Energy straggling of helium ions in aluminum, 9: 11018 (J;US)
Inner-Shell Ionization
K-shell ionization cross section for Ti, Fe, Cu, Zr, and Ag, 9: 11033 (J;US)
Ion-Atom Collisions
Calculation of double differential cross section for fast ion and electron impact ionization of atoms, 9: 11039 (J;US)
K-shell ionization cross section for Ti, Fe, Cu, Zr, and Ag, 9: 11033 (J;US)
Vacuum ultraviolet emission following impact of Li^+ and He^+ on He and Ne at 5-30 keV, 9: 11022 (J;US)
Ion-Molecule Collisions
Charge transfer of 0.8 MeV/u H^+, He^+ in various hydrocarbon gases, 9: 11032 (J;US)
HELIUM METHOD
See ISOTOPE DATING
HEMIPTERA
Mortality
Acute, chronic and reproductive effects of petroleum and two petroleum substitutes on the large milkweed bug, Oncopeltus fasciatus, 9: 10933 (R;US)
Reproduction
Acute, chronic and reproductive effects of petroleum and two petroleum substitutes on the large milkweed bug, Oncopeltus fasciatus, 9: 10933 (R;US)
HEMORRHAGE
Biological Effects
Plasma levels of immunoreactive erythropoietin after acute blood loss in man, 9: 10835 (J;GB)
HENS
See CHICKENS
HEPTANE
Equations of State
Modelling the thermodynamic properties of natural gases in the region of retrograde condensation (90 mol % methane, 10 mol % heptane, at 275 to 375 K and 1 to 30 MPa), 9: 9410 (BA;US)
Thermodynamic Properties
Modelling the thermodynamic properties of natural gases in the region of retrograde condensation (90 mol % methane, 10 mol % heptane, at 275 to 375 K and 1 to 30 MPa), 9: 9410 (BA;US)
HERBICIDES
Environmental Impacts
Interaction of pesticides and microorganisms in aquatic ecosystems. Part of a coordinated programme on isotopic-tracer-aided research and monitoring on agricultural residue-biological interactions in aquatic ecosystems. Final report for the period 1 November 1980 - 30 June 1982, 9: 10741 (R;XA)
HERPES SIMPLEX
Radioimmunoassay
Monoclonal antibodies to Herpes Simplex Virus Type 2, 9: 10802 (R;NL)
HETEROCYCLIC COMPOUNDS
See also FURANS
POLYCYCLIC SULFUR HETEROCYCLES
THIOPHENE
TMTSF
Raman Spectra
Molecular complexes of copper uroporphyrin with aromatic acceptors, 9: 10369 (J;US)
HETEROGENEOUS REACTOR CORES
Gamma Radiation
Heating measurements in a heterogeneous core configuration, 9: 9831 (R;FR)
Radiation Heating
Heating measurements in a heterogeneous core configuration, 9: 9831 (R;FR)
HEWLETT-PACKARD COMPUTERS
See HP COMPUTERS
HGI2 SEMICONDUCTOR DETECTORS
Technology Assessment
1984 State of the art of the technology of mercuric iodide x-ray and gamma radiation detectors, 9: 10580 (R;US)
HIGGS BOSONS
Particle Properties
Physics with 100-1000 TeV accelerators, 9: 11055 (R;XA)
HIGGS MODEL
Magnetic Monopoles
Topological excitations and Monte-Carlo simulation of the Abelian-Higgs model, 9: 11109 (RA;SU)
HIGH ENERGY PHYSICS
Use only for articles of a very broad nature such as an annual research program, etc.
Meetings
Multiquark interactions and quantum chromodynamics, 9: 11050 (R;SU)
HIGH ENERGY RADIOTHERAPY
See RADIOTHERAPY

HIGH TEMPERATURE
Corrosive Effects
Depassivation and repassivation of austenitic stainless steels. Consequences on stress corrosion cracking (SS 304L and 309L), 9: 10218 (R;FR)
HIGH TEMPERATURE GAS COOLED AND GRAPHITE
See HTGR TYPE REACTORS
HIGH-BETA PLASMA
Beta from 0.1 to 1.
Ballooning Instability
Ballooning mode stability of bean-shaped cross sections for high-β tokamak plasmas, 9: 11254 (J;US)
Energetic particle stabilization of ballooning modes in tokamaks, 9: 11255 (J;US)
Equilibrium
Hydromagnetic equilibrium and stability in high beta toroidal plasmas, 9: 11198 (RA;AU)
Kink Instability
Stability of n = 1 kink modes in bean-shaped tokamaks, 9: 11253 (J;US)
Stability
Ballooning mode stability of bean-shaped cross sections for high-β tokamak plasmas, 9: 11254 (J;US)
Energetic particle stabilization of ballooning modes in tokamaks, 9: 11255 (J;US)
Stability of n = 1 kink modes in bean-shaped tokamaks, 9: 11253 (J;US)
HIGH-FREQUENCY HEATING
See also ECR HEATING
ICR HEATING
Some aspects of the coupling of the r.f. power to a magnetoplasma, 9: 11194 (RA;AU)
Current-Drive Heating
Efficiency of RF current drive schemes, 9: 11205 (RA;AU)
HIGH-LEVEL RADIOACTIVE WASTES
Leaching
Electrokinetic effects and the concepts of zeta potential and zero point of charge, 9: 9473 (R;US)
The effects of surface area to solution volume on waste glass leaching, 9: 9494 (J;US)
Packaging
Long-term performance of materials used for high-level waste packaging. Second quarterly report, year two, July 1983-September 1983. Volume 2, 9: 9484 (R;US)
Transportation packagings for high-level wastes and unprocessed transuranic wastes, 9: 9453 (J;US)
Solvent Extraction
Inductively coupled plasma-atomic emission spectrometry (ICP-AES) in support of nuclear waste management, 9: 10311 (R;US)
Transport
Transportation packagings for high-level wastes and unprocessed transuranic wastes, 9: 9453 (J;US)
HIGH-VOLTAGE PULSE GENERATORS
Switching Circuits
Workshop on solid state switches for pulsed power, held January 12-14, 1983 at Tamarron, Colorado. Final report, 9: 10447 (R;US)
HOG FUEL
See WOOD WASTES
HOLLANDITE
Comparative Evaluations
Incorporation of radionuclides in crystalline titanates, 9: 9511 (J;US)
HOLMIUM COMPLEXES
Nuclear Magnetic Resonance
Enhanced nuclear magnetic resonance in a non-magnetic cubic doublet. A study performed with a ^{4}He-circulating dilution refrigerator, 9: 10234 (R;NL)
HOLOGRAPHY
Design
Study of a multitransducer device by numerical simulation (acoustical holography), 9: 10438 (R;FR;In French)
Sound Waves
Study of a multitransducer device by numerical simulation (acoustical holography), 9: 10438 (R;FR;In French)
HOMOGENEOUS MIXTURES
Neutron Transport
Solution of multidimensional inverse transport problems, 9: 11149 (J;US)
HOPPERS
Valves
The METC prototype lockhopper valve testing and development program review, 9: 10413 (J;US)
HOST-CELL REACTIVATION
Inhibition
Effect of dark repair inhibitors on survival of phage SPP1 Bacillus subtilis following UV irradiation, 9: 10860 (RA;CS;In Czech)
HOT CELLS
Shielding
Development of a promising filtration method for liquid clarification in nuclear facilities (For TMI-2 water, reprocessing dissolver solutions, $ZnBr_2$ shielding solutions), 9: 9879 (R;US)
HOT ENRICHED CARBON MODERATED THERMAL OSC
See HECTOR REACTOR
HOT WATER HEATERS
See WATER HEATERS
HOTELS
Energy Conservation
Model industry initiated energy conservation program. Final report, 9: 10174 (R;US)
HOUSEHOLDS
Energy Conservation
Qualitative response models and the estimation of energy savings from utility conservation programs, 9: 10021 (J;GB)
Responses to changing energy conditions among Massachusetts households, 9: 10087 (J;GB)
Energy Consumption
Estimating household energy expenditures in the Phase I Comprehensive Human Resources Data System. Task 11 final report, 9: 9978 (R;US)
Extending the CHRD System into a microanalytic model of the US economy: a literature review and preliminary design, 9: 9979 (R;US)
Influence of the dwelling habits on the consumption of energy in small houses, 9: 10060 (R;SE;In Swedish)
North Carolina Rate Demonstration Project: Blue Ridge Electric Membership Corporation. Volume I. Design and implementation, 9: 10066 (R;US)
North Carolina Rate Demonstration Project: Carolina Power and Light Company study. Volume II. Results and conclusions, 9: 10067 (R;US)
North Carolina Rate Demonstration Project. Project Library. Part 1, 9: 10065 (R;US)
North Carolina rate demonstration project. Carolina Power and Light Company study. Project library Part 2. Volume 2, 9: 10125 (R;US)
North Carolina rate demonstration project. Carolina Power and Light Company study. Project library Part 3. Volume 2, 9: 10126 (R;US)
North Carolina rate demonstration project. Blue Ridge Electric Membership Corporation. Volume II. Results and conclusions, 9: 10068 (R;US)
North Carolina rate demonstration project. Carolina Power and Light Company study. Volume I. Design and implementation, 9: 10069 (R;US)
North Caroline rate demonstration project. Blue Ridge Electric Membership Corporation study. Project library. Volume 2, 9: 10070 (R;US)
Responses to changing energy conditions among Massachusetts households, 9: 10087 (J;GB)
Energy Expenses
Household impacts of gasoline decontrol, 9: 9980 (R;US)
Energy Models
Qualitative response models and the estimation of energy savings from utility conservation programs, 9: 10021 (J;GB)
Retrofitting
Qualitative response models and the estimation of energy savings from utility conservation programs, 9: 10021 (J;GB)

Standard of Living
Influence of the dwelling habits on the consumption of energy in small houses, 9: 10060 (R;SE;In Swedish)
HOUSES
Direct Gain Systems
DOE/MASEC energy research house, Olathe, Kansas. Final report, 9: 9699 (R;US)
Energy Analysis
The applicability of energy models to occupied houses: summer electric use in Davis, 9: 10114 (J;GB)
Energy Audits
Your home energy audit: the first step to more energy-efficient living, 9: 10063 (R;US)
Energy Conservation
Analysis of conservation and renewable options for new single-family residences, 9: 10085 (J;US)
Your home energy audit: the first step to more energy-efficient living, 9: 10063 (R;US)
Energy Models
The applicability of energy models to occupied houses: summer electric use in Davis, 9: 10114 (J;GB)
Solar Space Heating
DOE/MASEC energy research house, Olathe, Kansas. Final report, 9: 9699 (R;US)
Solar energy system performance evaluation update. Karasek Home, Blackstone, Massachusetts, April 1982-May 1983, 9: 9707 (R;US)
Solar Water Heating
DOE/MASEC energy research house, Olathe, Kansas. Final report, 9: 9699 (R;US)
Solar energy system performance evaluation update. Karasek Home, Blackstone, Massachusetts, April 1982-May 1983, 9: 9707 (R;US)
Space HVAC Systems
Analysis of conservation and renewable options for new single-family residences, 9: 10085 (J;US)
Thermal Comfort
Customer preference and response to the indoor environment with gas space heating systems, 9: 10107 (BA;US)
Water Heating
Analysis of conservation and renewable options for new single-family residences, 9: 10085 (J;US)
Weatherization
Your home energy audit: the first step to more energy-efficient living, 9: 10063 (R;US)
HOVERCRAFT

HYBRID ELECTRIC-POWERED VEHICLES
Battery Chargers
A microcomputer controlled hybrid vehicle with on-board battery charger, 9: 10191 (J;US)
Computerized Control Systems
A microcomputer controlled hybrid vehicle with on-board battery charger, 9: 10191 (J;US)
HYBRID REACTORS
Comeback of beam-fusion with gains ready for the hybrid reactor, 9: 11313 (RA;AU)
HYBRID SYSTEMS
Computerized Simulation
Design and construction of a hybrid photovoltaic (3KW /SUB p/) -thermal solar energy system for a residential/commercial building, 9: 9667 (J;US)
Construction
Design and construction of a hybrid photovoltaic (3KW /SUB p/) -thermal solar energy system for a residential/commercial building, 9: 9667 (J;US)
Design
Design and construction of a hybrid photovoltaic (3KW /SUB p/) -thermal solar energy system for a residential/commercial building, 9: 9667 (J;US)
Economic Analysis
Design and construction of a hybrid photovoltaic (3KW /SUB p/) -thermal solar energy system for a residential/commercial building, 9: 9667 (J;US)
Flat Plate Collectors
Design and construction of a hybrid photovoltaic (3KW /SUB p/) -thermal solar energy system for a residential/commercial building, 9: 9667 (J;US)
Heat Pumps
Design and construction of a hybrid photovoltaic (3KW /SUB p/) -thermal solar energy system for a residential/commercial building, 9: 9667 (J;US)

Photovoltaic Cells
Design and construction of a hybrid photovoltaic (3KW /SUB p/) -thermal solar energy system for a residential/commercial building, 9: 9667 (J;US)
Planning
Design and construction of a hybrid photovoltaic (3KW /SUB p/) -thermal solar energy system for a residential/commercial building, 9: 9667 (J;US)
Solar Heating Systems
Design and construction of a hybrid photovoltaic (3KW /SUB p/) -thermal solar energy system for a residential/commercial building, 9: 9667 (J;US)

HYBRIDOMAS
Sister Chromatid Exchanges
Cytogenetic characterization of the CHO mutant EM9, 9: 10773 (R;US)

HYCSOS
See CHEMICAL HEAT PUMPS

HYDRAULIC EQUIPMENT
Performance Testing
Hydraulic pumping unit. Final technical progress report, 9: 9325 (R;US)

HYDRAULIC FRACTURES
Design
Evaluation of stimulation treatments in Appalachian tight gas sands, 9: 9376 (J;US)

HYDRAULIC FRACTURING
Planning
Determination of in-situ stress from anelastic strain recovery measurements of oriented core, 9: 9378 (J;US)

HYDRAULIC RAMS
See PUMPS

HYDRAULIC TRANSPORT
Testing
Hydraulic transport of limestone aggregates and colliery spoil, 9: 10405 (R;US)

HYDROCARBONS

STYRENE
TOLUENE
Charge Exchange
Charge transfer of 0.8 MeV/u H^+, He^+ in various hydrocarbon gases, 9: 11032 (J;US)
Chemical Radiation Effects
Genesis of uranium-gold pyritic conglomerates, 9: 9441 (RA;US)
Uraniferous constituents of the Witwatersrand conglomerates: ore-microscopic observations and implications for the Witwatersrand metallogeny, 9: 9430 (RA;US)
Conversion
Molecular surface science of heterogeneous catalysis. History and perspective, 9: 10240 (R;US)
Diffusion
Further experiments on a model of an escape of heavy gas, 9: 10668 (R;US)
Ecological Concentration
Air pollution from oxides of nitrogen, carbon monoxide and hydrocarbons, 9: 10663 (R;US)
Gas Chromatography
Some aspects of the development of the Vaal Reef uranium-gold carbon seams, Witwatersrand sequence: organic geochemical and microbiological considerations, 9: 9431 (RA;US)
Ion-Molecule Collisions
Charge transfer of 0.8 MeV/u H^+, He^+ in various hydrocarbon gases, 9: 11032 (J;US)
Reduction of the electron capture cross-section for protons in hydrocarbon gases, 9: 11042 (J;US)
Mass Spectroscopy
Some aspects of the development of the Vaal Reef uranium-gold carbon seams, Witwatersrand sequence: organic geochemical and microbiological considerations, 9: 9431 (RA;US)
Pollution Sources
Air pollution from oxides of nitrogen, carbon monoxide and hydrocarbons, 9: 10663 (R;US)
Synthesis
Cation promotion effects in zeolite-supported F-T catalysts. First quarterly report, September-November 1983, 9: 9538 (R;US)

HYDROCHLORIC ACID
Absorption Spectra
Differential optical absorption techniques for diagnostics of coal gasification. Technical progress report, October, November, December 1982, 9: 9260 (R;US)
Enthalpy
Thermodynamics of the unsymmetrical mixed electrolyte HCl-$LaCl_3$, 9: 10376 (J;US)
Thermodynamic Activity
Thermodynamics of the unsymmetrical mixed electrolyte HCl-$LaCl_3$, 9: 10376 (J;US)
Thermodynamics
Thermodynamics of the unsymmetrical mixed electrolyte HCl-$LaCl_3$, 9: 10376 (J;US)

HYDROCYANIC ACID
Absorption Spectra
Differential optical absorption techniques for diagnostics of coal gasification. Technical progress report, October, November, December 1982, 9: 9260 (R;US)

HYDROCYCLONES
See CYCLONE SEPARATORS

HYDROELECTRIC POWER
Bibliographies
List of reports, etc. on hydroelectric power investigations in Greenland as of June 30, 1983, 9: 9561 (R;DK;In Danish)
Public Opinion
Nuclear risk assessment and public acceptance. Final report for the period 1 December 1979-30 November 1982, 9: 9968 (R;XA)
Risk Assessment
Nuclear risk assessment and public acceptance. Final report for the period 1 December 1979-30 November 1982, 9: 9968 (R;XA)

HYDROELECTRIC POWER PLANTS
See also LOW-HEAD HYDROELECTRIC POWER PLANTS
SMALL-SCALE HYDROELECTRIC POWER PLANTS
Feasibility Studies
Brief reconnaissance study for the addition of hydropower for Autauga Creek Dam, Prattville, Alabama, 9: 9578 (R;US)
Brief reconnaissance study for the addition of hydropower for Gunpowder Dam No. 1, Granite Falls, North Carolina, 9: 9564 (R;US)
Financial Data
STEWEAG business report 1981, 9: 9580 (R;AT;In German)
Public Opinion
Perceived risk of nuclear and hydro electrical power generation in Colombia. Final report for the period 1 July 1980-31 January 1983, 9: 9969 (R;XA)
Risk Assessment
Perceived risk of nuclear and hydro electrical power generation in Colombia. Final report for the period 1 July 1980-31 January 1983, 9: 9969 (R;XA)

HYDROELECTRICITY
See HYDROELECTRIC POWER

HYDROFLUORIC ACID
Removal
Trapping of gaseous fluoride emissions on solid sorbents, 9: 10650 (RA;US)

HYDROGEN
Absorption Spectra
Differential optical absorption techniques for diagnostics of coal gasification. Technical progress report, October, November, December 1982, 9: 9260 (R;US)
Activation Analysis
Laboratory and field acceptance performance of CONAC, 9: 9264 (R;US)
Atom-Molecule Collisions
Influence of collisions with noble gases on spectral lines of hydrogen isotopes, 9: 11006 (R;NL)

Chemical Reactions
Dealkylation of N,N-dimethylaniline with sulphur and hydrogen sulphide, 9: 10361 (J;GB)
Combustion Kinetics
Combustion characteristics of low- and intermediate-Btu gases, 9: 10395 (BA;US)
Consumption Rates
Chemical and biological effects of heavy distillate recycle in the SRC-II process, 9: 9238 (R;US)
Diffusion
Diffusion of hydrogen, hydrogen sulfide and large molecular weight anions in bentonite, 9: 10298 (R;SE)
Unusual isotope effects for diffusion in VH 0.50 and VT 0.50, 9: 10354 (J;US)
Emission Spectra
Stark spectroscopy of hydrogen lines in turbulent plasma. 1. Low-frequency turbulence, 9: 11250 (TG;US)
Enthalpy
Thermodynamic properties of gaseous mixtures containing water, 9: 9412 (BA;US)
Equations of State
Burnett-isochoric P-V-T measurements of hydrogen-methane mixtures (80 mol % methane, 20 mol % hydrogen mixture from 130K to 600K for pressures as high as 70 MPa), 9: 9405 (BA;US)
Flammability
Lean flammability limit of some gaseous mixtures involving methane, 9: 9414 (BA;US)
Ion-Molecule Collisions
Electron capture by protons and deuterons, 9: 11036 (J;US)
Metabolism
Radioassay for hydrogenase activity in viable cells and documentation of aerobic hydrogen-consuming bacteria living in extreme environments, 9: 10827 (J;US)
Permeability
Study of the behavior of gas distribution equipment in hydrogen service. Phase II. Project 65022 final report, April 26, 1979-June 26, 1980, 9: 9384 (R;US)
Phase Studies
Burnett-isochoric P-V-T measurements of hydrogen-methane mixtures (80 mol % methane, 20 mol % hydrogen mixture from 130K to 600K for pressures as high as 70 MPa), 9: 9405 (BA;US)
Pneumatic Transport
Systems analysis of hydrogen supplementation in natural gas pipelines, 9: 9534 (BA;US)
Recombination
Measurements of the hydrogenic recombination coefficient for the TFTR vacuum vessel, 9: 11230 (R;US)
Turbulence
Stark spectroscopy of hydrogen lines in turbulent plasma. 1. Low-frequency turbulence, 9: 11250 (TG;US)

HYDROGEN 1 MINUS BEAMS
Polarized Beams
Status and future plans for the BNL polarized H^- source, 9: 10505 (R;US)

HYDROGEN 2
See DEUTERIUM

HYDROGEN 3
See TRITIUM

HYDROGEN CHLORIDES
See HYDROCHLORIC ACID

HYDROGEN CYANIDES
See HYDROCYANIC ACID

HYDROGEN FLUORIDES
See HYDROFLUORIC ACID

HYDROGEN FUEL CELLS
Marketing Research
Systems analysis of hydrogen supplementation in natural gas pipelines, 9: 9534 (BA;US)

HYDROGEN FUELS
Marketing Research
Systems analysis of hydrogen supplementation in natural gas pipelines, 9: 9534 (BA;US)

HYDROGEN HYDROXIDES
See WATER

HYDROGEN IONS
See also HYDROGEN IONS 1 MINUS
HYDROGEN IONS 1 PLUS
HYDROGEN IONS 2 PLUS
Collisions
Hydrogen ion scattering from surfaces, 9: 11009 (RA;AU)

HYDROGEN IONS 1 MINUS
For H_1^- ions.
H^- production from different metallic converter surfaces, 9: 11323 (R;US)
Volume generation of negative ions in high density hydrogen discharges, 9: 11335 (R;US)
Charge Exchange
Formation of H^- by charge transfer in alkaline-earth vapors, 9: 11322 (R;US)
Work Functions
Collisional mechanisms in D^- beam sources for MFE experiments and reactors. Progress report No. 16 for quarter ending December 31, 1983, 9: 11286 (R;US)

HYDROGEN IONS 1 PLUS
For H_1^+ ions.
Charge Exchange
Collisional mechanisms in D^- beam sources for MFE experiments and reactors. Technical progress report, 9: 11285 (R;US)
Differential Cross Sections
Calculation of double differential cross section for fast ion and electron impact ionization of atoms, 9: 11039 (J;US)
Electron Capture
Charge transfer of 0.8 MeV/u H^+, He^+ in various hydrocarbon gases, 9: 11032 (J;US)
Electron capture by protons and deuterons, 9: 11036 (J;US)
Reduction of the electron capture cross-section for protons in hydrocarbon gases, 9: 11042 (J;US)
Ion-Atom Collisions
Calculation of double differential cross section for fast ion and electron impact ionization of atoms, 9: 11039 (J;US)
K-shell ionization by low-velocity ions, 9: 11024 (J;US)
K-shell ionization cross section for Ti, Fe, Cu, Zr, and Ag, 9: 11033 (J;US)
L-shell ionization cross sections of Ba, Ce, Nd, Sm and Dy for proton energies from 0.5 to 2.0 MeV, 9: 11025 (J;US)
L-shell ionization in proton and alpha particle collisions with argon, 9: 11037 (J;US)
Ion-Ion Collisions
Laser spectroscopic studies of molecular ions using fast ion beam photofragment spectroscopy, 9: 11044 (J;US)
Ion-Molecule Collisions
Charge transfer of 0.8 MeV/u H^+, He^+ in various hydrocarbon gases, 9: 11032 (J;US)
Electron capture by protons and deuterons, 9: 11036 (J;US)
Reduction of the electron capture cross-section for protons in hydrocarbon gases, 9: 11042 (J;US)
Laser Spectroscopy
Laser spectroscopic studies of molecular ions using fast ion beam photofragment spectroscopy, 9: 11044 (J;US)
X Radiation
K-shell ionization by low-velocity ions, 9: 11024 (J;US)

HYDROGEN IONS 2 PLUS
For H_2^+ ions.
Ion-Ion Collisions
Laser spectroscopic studies of molecular ions using fast ion beam photofragment spectroscopy, 9: 11044 (J;US)
Laser Spectroscopy
Laser spectroscopic studies of molecular ions using fast ion beam photofragment spectroscopy, 9: 11044 (J;US)

HYDROGEN ISOTOPES

HYDROGEN STORAGE
Palladium Hydrides
Hydrogen diffusion and isotope separation, 9: 9525 (BA;US)
HYDROGEN SULFIDES
Absorption Spectra
Differential optical absorption techniques for diagnostics of coal gasification. Technical progress report, October, November, December 1982, 9: 9260 (R;US)
Chemical Reactions
Dealkylation of N,N-dimethylaniline with sulphur and hydrogen sulphide, 9: 10361 (J;GB)
Compressibility
Fluid property research at the National Bureau of Standards, Boulder, 9: 9407 (BA;US)
Corrosive Effects
Materials performance at high temperatures and pressures in simulated coal gasification atmospheres, 9: 9245 (BA;US)
Diffusion
Diffusion of hydrogen, hydrogen sulfide and large molecular weight anions in bentonite, 9: 10298 (R;SE)
Environmental Transport
The flux of sulfur-containing gases to vegetation, 9: 10671 (J;GB)
HYDROGENASE
See HYDROGENASES
HYDROGENASES
Code number 1.12
Radioassay
Radioassay for hydrogenase activity in viable cells and documentation of aerobic hydrogen-consuming bacteria living in extreme environments, 9: 10827 (J;US)
HYDROGENATION
Catalysts
Chemical and biological effects of heavy distillate recycle in the SRC-II process, 9: 9238 (R;US)
Metal boride catalysts for indirect liquefaction. Quarterly technical progress report, September 1-November 30, 1983, 9: 9536 (R;US)
New catalysts for coal liquid upgrading. Quarterly report, September 1-November 30, 1983, 9: 9230 (R;US)
Novel catalytic methods for heteroatom removal in coal liquids upgrading. Quarterly report No. 1, September 1-December 1, 1983, 9: 9233 (R;US)
HYDROLOGY
Earth Sciences Division annual report, 1982, 9: 9729 (R;US)
Isotope Applications
Isotopic and chemical techniques in hydrology, with application to Blue Lake, Southeastern Australia, 9: 10733 (B;AU)
HYDROMAGNETIC WAVES

IODINE 129
Intestinal Absorption
Oral intake of radionuclides in the population. A review of biological factors of relevance for assessment of absorbed dose at long term waste storage, 9: 10847 (R;SE)
IODINE 131
Environmental Transport
Radionuclide transport processes in terrestrial ecosystems, 9: 10720 (J;US)
IODINE COMPOUNDS
Stability
The stability of dissolved inorganic species of iodine in seawater, 9: 10730 (J;NL)
IODINE IODIDES
See IODINE
IODINE IONS
Ion-Atom Collisions
Influence of the nuclear reaction time onto the delta-electron emission studied by the reaction J → Au,Bi at 795 and 840 MeV, 9: 10999 (RA;DE;In German)
K-vacancy production in heavy-ion-atom collisions at small impact parameters, 9: 11015 (J;US)
Study of binding energies and electron densities in superheavy quasiatoms by means of delta-ray spectroscopy, 9: 11000 (RA;DE;In German)
ION ACOUSTIC WAVES
Non-dispersive ion waves
Scattering
Extreme forward scattering from ion acoustic waves in a laboratory plasma, 9: 11196 (RA;AU)
ION BEAMS
See also HYDROGEN I MINUS BEAMS
Beam Neutralization
Neutralisation rates associated with the scattering of low energy ions from surfaces, 9: 11010 (RA;AU)
Collisions
Ionization by low and intermediate energy ion and neutral beams, 9: 11029 (J;US)
Hydrodynamic Model
Comparisons of hydrodynamic beam models with kinetic treatments. Revision 1, 9: 10497 (R;US)
Radiobiology
In vivo radiobiology of heavy ions, 9: 10910 (J;US)
Molecular and cellular radiobiology of heavy ions, 9: 10908 (J;US)
RBE
Molecular and cellular radiobiology of heavy ions, 9: 10908 (J;US)
ION COLLISIONS
See also ION-ATOM COLLISIONS
Electron capture from inner shells by fully stripped ions, 9: 11034 (J;US)
Beam Neutralization
Neutralisation rates associated with the scattering of low energy ions from surfaces, 9: 11010 (RA;AU)
Scattering
Neutralisation rates associated with the scattering of low energy ions from surfaces, 9: 11010 (RA;AU)
ION CYCLOTRON-RESONANCE HEATING
See ICR HEATING
ION DETECTION
CDTE Semiconductor Detectors
Pulse height response of Cd-Te to heavy ions, 9: 10619 (J;US)
Drift Chambers
DIOGENE: a small-scale pictorial drift chamber at Saturne, 9: 10570 (R;FR)
Pattern recognition program for the pictorial drift chamber DIOGENE, 9: 10571 (R;FR)
ION EXCHANGE MEMBRANES
See MEMBRANES
ION PLASMA WAVES
Dispersive ion waves
Bernstein Mode
Parametric excitation of ion Bernstein waves by a fast wave antenna in the ion cyclotron frequency range, 9: 11231 (R;US)
ION SOURCES
See also ELECTRON BEAM ION SOURCES
Formation of H^- by charge transfer in alkaline-earth vapors, 9: 11322 (R;US)
Volume generation of negative ions in high density hydrogen discharges, 9: 11335 (R;US)
Atomic Beams
Source for unpolarized sodium ions (SUSI) at the MP tandem, 9: 10511 (RA;DE;In German)
Beam Bunchers
A high efficiency bunching system for the TUNL polarized ion source, 9: 10549 (J;US)
Charge Exchange
Collisional mechanisms in D^- beam sources for MFE experiments and reactors. Technical progress report, 9: 11285 (R;US)
Design
Capture by highly-charged low-energy ions studies studied with a secondary ion recoil source, 9: 10536 (J;US)
Characteristics of a long-pulse (30-s), high-power (4-MW) ion source for neutral beam injection, 9: 11271 (R;US)
Considerations involved in the design of negative-ion-based neutral beam systems, 9: 11324 (R;US)
Development of an ion source for long-pulse (30-s) neutral beam injection, 9: 11262 (R;US)
Efficiency
H^- production from different metallic converter surfaces, 9: 11323 (R;US)
Ion-Atom Collisions
Collisional mechanisms in D^- beam sources for MFE experiments and reactors. Technical progress report, 9: 11285 (R;US)
Optimization
2D accelerator design for SITEX negative ion source, 9: 11267 (R;US)
Performance
Capture by highly-charged low-energy ions studies studied with a secondary ion recoil source, 9: 10536 (J;US)
Polarized Beams
A high efficiency bunching system for the TUNL polarized ion source, 9: 10549 (J;US)
Further development on sources for polarized alkali ions, 9: 10512 (RA;DE;In German)
Source for polarized heavy ions (PSI) at the MP tandem, 9: 10510 (RA;DE;In German)
Work Functions
Collisional mechanisms in D^- beam sources for MFE experiments and reactors. Progress report No. 16 for quarter ending December 31, 1983, 9: 11286 (R;US)
Generation of H^-, D^- ions on composite surfaces with application to surface/plasma ion source systems, 9: 11336 (R;US)
ION-ATOM COLLISIONS
Charge Exchange
On charge transfer in ion-atom collisions at intermediate collision velocities, 9: 11031 (J;US)
Charge State
Final charge states of ions scattered to large angles by single collisions, 9: 11021 (J;US)
Interpretation of high-Q scattering experiments, 9: 11040 (J;US)
Excitation
Cross sections for K- and L-shell excitation in energetic ion-atom collisions, 9: 11028 (J;US)
Inner-Shell Ionization
Cross sections for K- and L-shell excitation in energetic ion-atom collisions, 9: 11028 (J;US)
Ionization
Interpretation of high-Q scattering experiments, 9: 11040 (J;US)
Pair Production
Influence of statistical fluctuations of heavy ion cross sections on the spectrum of atomically created positrons, 9: 11001 (RA;DE;In German)
Scattering
Final charge states of ions scattered to large angles by single collisions, 9: 11021 (J;US)

Total Cross Sections
Total cross sections and impact-parameter dependence of X-ray production in ion-atom collisions, 9: 11023 (J;US)
X Radiation
Total cross sections and impact-parameter dependence of X-ray production in ion-atom collisions, 9: 11023 (J;US)

IONIC REACTIONS
See CHEMICAL REACTIONS IONS

IONIZATION CALORIMETERS
See SHOWER COUNTERS

IONOSPHERE
Electric Fields
Ion and electron injection in ionosphere and magnetosphere. Application to the parallel electric field measurement in auroral zones, 9: 10983 (R;FR;In French)
Plasma Instability
Role of plasma instabilities in the production of ionospheric irregularities, 9: 10984 (RA;AU)

IONS
Ions in solutions are indexed as compounds; ions in gases by the precoordinated descriptor consisting of the element name and the term ions; ions in beams by assigning either the specific name if available, e.g. ARGON 40 BEAMS

Electron Capture
Electron capture from inner shells by fully stripped ions, 9: 11034 (J;US)
Trapping
Circuit effects on pierce instabilities, and double-layer formation, 9: 11241 (R;SE)

IONS (MOLECULAR)
See MOLECULAR IONS

IPP GARCHING
Max-Planck-Institut fuer Plasmaphysik.
Research Programs
IPP: Annual report 1982, 9: 11348 (B;DE;In German)

IRIDIUM ALLOYS
Crystal Field
Experimental study of praseodymium intermetallic compounds at low temperatures, 9: 10233 (R;NL)
Electronic Structure
Experimental study of praseodymium intermetallic compounds at low temperatures, 9: 10233 (R;NL)

IRON
Activation Analysis
Activation analysis of soils using 14 MeV neutrons, 9: 10329 (RA;CS;In Slovak)
Multielement neutron activation analysis of an iron ore, 9: 10344 (J;US)
Trace element analysis of biological materials: Complementarity of PIXE and NAA, 9: 10342 (J;US)
Catalytic Effects
Metal boride catalysts for indirect liquefaction. Quarterly technical progress report, September 1-November 30, 1983, 9: 9536 (R;US)
Molecular surface science of heterogeneous catalysis. History and perspective, 9: 10240 (R;US)
Charged-Particle Transport
Shielding considerations for multi-GeV/nucleon heavy ion accelerators: the introduction of a new heavy ion transport code, HIT, 9: 10517 (R;US)
Ecological Concentration
Concentration of heavy metals in water plants of some Austrian running waters, 9: 10932 (R;AT;In German.)
Emission Spectroscopy
Inductively coupled plasma-atomic emission spectrometry (ICP-AES) in support of nuclear waste management, 9: 10311 (R;US)
Inner-Shell Ionization
K-shell ionization cross section for Ti, Fe, Cu, Zr, and Ag, 9: 11033 (J;US)
Ion-Atom Collisions
K-shell ionization cross section for Ti, Fe, Cu, Zr, and Ag, 9: 11033 (J;US)
Muon Reactions
Measurement of the nucleon structure function in iron using 215- and 93-GeV muons, 9: 11063 (J;US)
Nuclear Reaction Analysis
Determination of technologically important elements in nickel ores using radiative neutron capture, 9: 10321 (RA;CS;In Czech)
Oxidation
Characterization of supported iron catalysts during Fischer-Tropsch synthesis. Technical progress report, August 1, 1983-December 31, 1983, 9: 9537 (R;US)
PIXE Analysis
Large scale study of tooth enamel, 9: 10343 (J;US)
Trace element analysis of biological materials: Complementarity of PIXE and NAA, 9: 10342 (J;US)
X-ray fluorescence analysis of metallic glasses, 9: 10332 (RA;CS;In Slovak)
Polarography
Determination of ferrous-ferric ratios in SYNROC nuclear waste form, 9: 9499 (J;US)
Precipitation
A partial equilibrium model to characterize the precipitation of ferric ion during the leaching of chalcopyrite with ferric sulfate, 9: 10339 (J;US)
Raffinate treatment at the Portsmouth Gaseous Diffusion Plant, 9: 9461 (RA;US)
Structural Chemical Analysis
Characterization of supported iron catalysts during Fischer-Tropsch synthesis. Technical progress report, August 1, 1983-December 31, 1983, 9: 9537 (R;US)
Surface Properties
Characterization of supported iron catalysts during Fischer-Tropsch synthesis. Technical progress report, August 1, 1983-December 31, 1983, 9: 9537 (R;US)
Voltametry
Determination of ferrous-ferric ratios in SYNROC nuclear waste form, 9: 9499 (J;US)
X-Ray Fluorescence Analysis
X-ray fluorescence analysis of metallic glasses, 9: 10332 (RA;CS;In Slovak)

IRON 57
Moessbauer Effect
Intermetallic compound structure and phase transformations in zirconium based alloys during the annealing and under irradiation with the electron pulsed beam, 9: 10238 (RA;SU;In Russian)

IRON ALLOYS
See also ALLOY-RA-333
HAYNES 188 ALLOY
HAYNES ALLOYS
HAYNES STELLITE 6B
IRON BASE ALLOYS
MONEL 400
STELLITE 6
Annealing
Intermetallic compound structure and phase transformations in zirconium based alloys during the annealing and under irradiation with the electron pulsed beam, 9: 10238 (RA;SU;In Russian)

Corrosion
Microstructural study of failure mechanisms during mechanical testing in coal gasification environments. Final report Mar 1980-Mar 1982, 9: 9237 (R;US)
Ductility
Radiation-induced changes of the ductility of amorphous $Fe_{40}Ni_{40}B_{20}$, 9: 10226 (R;DE)
Materials Testing
Microstructural study of failure mechanisms during mechanical testing in coal gasification environments. Final report Mar 1980-Mar 1982, 9: 9237 (R;US)
Mechanical Properties
Microstructural study of failure mechanisms during mechanical testing in coal gasification environments. Final report Mar 1980-Mar 1982, 9: 9237 (R;US)
Permeability
Evaluation of CO_2 and CO dopants in hydrogen to reduce hydrogen permeation in the Stirling engine heater heat tube alloy CG-27 (36Ni-13Cr-5.5Mo-2.6Ti-1.7Al-bal Fe), 9: 10183 (R;US)
Physical Radiation Effects
Intermetallic compound structure and phase transformations in zirconium based alloys during the annealing and under irradiation with the electron pulsed beam, 9: 10238 (RA;SU;In Russian)
Radiation-induced changes of the ductility of amorphous $Fe_{40}Ni_{40}B_{20}$, 9: 10226 (R;DE)
Spin Glass State
Spin correlations and reentrant spin-glass behavior in amorphous Fe-Mn alloys: Statics, 9: 10249 (J;US)

IRON BASE ALLOYS
See also INCOLOY ALLOYS
INVAR
STEELS
Activation Analysis
Neutron activation analysis of resistance wires, 9: 10325 (RA;CS;In Czech)
Chemical Composition
Performance of test materials in Westinghouse PDU fluid bed gasifier (6B, 188, N155, Alloy X, 26-1, 18SR, 825, 671, 800, 810 and 329; pack-aluminized type 310(Al) and 800(Al)), 9: 9247 (BA;US)
Corrosion
Corrosion of metals in coal liquefaction processes. Final report, 9: 9223 (R;US)
Performance of test materials in Westinghouse PDU fluid bed gasifier (6B, 188, N155, Alloy X, 26-1, 18SR, 825, 671, 800, 810 and 329; pack-aluminized type 310(Al) and 800(Al)), 9: 9247 (BA;US)
Materials Testing
Effect of simulated HTGR primary circuit helium on properties of structural alloys, 9: 9799 (RA;US)

IRON CHLORIDES
Hysteresis
Hysteretic behavior of the diluted random-field Ising system Fe/sub 0.70/Mg/sub 0.30/Cl_2, 9: 10305 (J;US)

IRON COMPLEXES
See also FERRICYANIDES
Infrared Spectra
Mossbauer and infrared studies of matrix-isolated iron-carbonyl complexes, 9: 10365 (J;US)
Moessbauer Effect
Mossbauer and infrared studies of matrix-isolated iron-carbonyl complexes, 9: 10365 (J;US)

IRON FLUORIDES
Photoelectron Spectroscopy
X-ray-photoelectron final-state screening in transition-metal compounds, 9: 10301 (J;US)

IRON ORES
Activation Analysis
Multielement neutron activation analysis of an iron ore, 9: 10344 (J;US)
Chemical Composition
Blind River uranium deposits: the ores and their setting, 9: 9436 (RA;US)
Gamma Spectra
Multielement neutron activation analysis of an iron ore, 9: 10344 (J;US)
Geologic History
Temporal and other factors affecting deposition of uraniferous conglomerates, 9: 9438 (RA;US)
Multi-Element Analysis
Multielement neutron activation analysis of an iron ore, 9: 10344 (J;US)
Phase Studies
Fluorescent and X-ray diffraction analysis for industrial wastes of the Comandante Cedro Soto Alba plant, 9: 10316 (R;CU;In Spanish)

IRON OXIDES
See also ZIRCONOLITE
Activation Analysis
Use of MTA 1527-2000 automatic activation analyzer in determining SiO_2 and Al_2O_3 in kaolin and clay samples, 9: 10328 (RA;CS;In Czech)
Structural Chemical Analysis
Characterization of supported iron catalysts during Fischer-Tropsch synthesis. Technical progress report, August 1, 1983-December 31, 1983, 9: 9537 (R;US)
Surface Properties
Characterization of supported iron catalysts during Fischer-Tropsch synthesis. Technical progress report, August 1, 1983-December 31, 1983, 9: 9537 (R;US)

IRON SULFIDES
See also CHALCOPYRITE
PYRITE
Electrochemistry
Statistical analysis of lithium iron sulfide status cell cycle life and failure mode, 9: 9966 (J;US)

IRON-NICKEL BATTERIES
Battery Charging
Charge characteristics of Ni/Fe traction cells, 9: 9963 (J;US)
Performance
Charge characteristics of Ni/Fe traction cells, 9: 9963 (J;US)

IRRIGATION
Leaching
Movement of water and nitrate-nitrogen in a typical silt loam soil of western Kansas. Report for 1 Jul 1980-Sep 1982, 9: 10707 (R;US)

ISOMERIC NUCLEI
High Spin States
Multidetector system for the search and investigation of high spin, high energy isomers produced in heavy ion induced nuclear reactions, 9: 10582 (R;FR)

ISOTOPE DATING
CRNL Mp Tandem Accelerator
Radioisotope detection and dating with tandem accelerators, 9: 10550 (J;US)
Tandem Electrostatic Accelerators
Radioisotope dating using an EN-tandem accelerator, 9: 10551 (J;US)

ISX TOKAMAK
Getters
Experience with Zr-Al getter pumps in the ISX-B tokamak, 9: 11265 (R;US)
Plasma Macroinstabilities
MHD activity in the ISX-B tokamak: experimental results and theoretical interpretation, 9: 11187 (R;US)

IU CYCLOTRON
Design
The Indiana University cyclotron facility (IUCF) 1980, 9: 10543 (J;US)
Performance
The Indiana University cyclotron facility (IUCF) 1980, 9: 10543 (J;US)
Research Programs
An overview of experiments at the Indiana University Cyclotron Facility, 9: 10539 (J;US)

Thermodynamic Activity
Thermodynamics of the unsymmetrical mixed electrolyte HCl-$LaCl_3$, 9: 10376 (J;US)
Thermodynamics
Thermodynamics of the unsymmetrical mixed electrolyte HCl-$LaCl_3$, 9: 10376 (J;US)

LANTHANUM SULFIDES
Magnetic Properties
Magnetic properties of Gd^{3+}-doped lanthanum sulfides Lasub(3-x)()sub(x)S_4, 9: 10355 (B;NL)

LAPPS
Contamination
^{137}Cs in Norwegian Lapps spring 1981, 9: 10714 (R;NO;In Norwegian)

LARGE COIL PROGRAM
Cooling Systems
Design of the coolant system for the Large Coil Test Facility pulse coils, 9: 11274 (R;US)
Quality Assurance
Quality assurance aspects of the major procurements for the Large Coil Test Facility, 9: 11275 (R;US)
LASER FUSION REACTORS
Laser Implosions
Scaling and electron penetration in slab plasmas, 9: 11343 (J;US)
Laser-Produced Plasma
Scaling and electron penetration in slab plasmas, 9: 11343 (J;US)
LASER IMPLOSIONS
Images
X-ray imaging of laser produced plasmas, 9: 11357 (B;GB)
LASER SPECTROSCOPY
Fiber Optics
Sensitive collinear laser spectroscopy on fast atom and ion beams, 9: 10574 (R;US)
Photomultipliers
Sensitive collinear laser spectroscopy on fast atom and ion beams, 9: 10574 (R;US)
LASER TARGETS
Radiation Transport
Gas filled dynamics for laser driven fusion reactors. Final report, August 4, 1981-December 31, 1983, 9: 11282 (R;US)
LASER-PRODUCED PLASMA
Ablation
Scaling and electron penetration in slab plasmas, 9: 11343 (J;US)
Alpha Spectra
Evaluation of alpha spectra from laser fusion pellets, 9: 11305 (RA;AU)
Charge Exchange
Ion probe measurements from laser-produced plasmas, 9: 11308 (RA;AU)
Electrostatics
Electrostatic fields in laser produced plasmas, 9: 11312 (RA;AU)
Energy Beam Deposition
Scaling and electron penetration in slab plasmas, 9: 11343 (J;US)
Focusing
Self-focusing of laser beam crossing a laser plasma, 9: 11314 (R;HU)
Self-focusing in laser produced spark, 9: 11315 (R;HU)
Magnetic Fields
Analytic models of magnetic field evolution in laser-produced plasma expansions. Memorandum report, 9: 10637 (R;US)
Plasma Density
Density profiles of plasmas produced by high intensity laser radiation, 9: 11303 (RA;AU)
Plasma Expansion
Ion probe measurements from laser-produced plasmas, 9: 11308 (RA;AU)
Radiations
Harmonic emission from laser-produced plasmas, 9: 11310 (RA;AU)
Raman Spectra
Stimulated Raman scattering from a laser-produced plasma, 9: 11304 (RA;AU)
Thermal Conduction
Explanation of reduced thermal conduction in (laser) nonlinear force steepened density profiles by a two-fluid damping mechanism, 9: 11311 (RA;AU)
X-Ray Radiography
X-ray imaging of laser produced plasmas, 9: 11357 (B;GB)
X-Ray Spectra
Development of soft x-ray streak cameras at Lawrence Livermore National Laboratory, 9: 11248 (R;US)
X-ray emission from a laser-produced plasma, 9: 11309 (RA;AU)
LASER-RADIATION HEATING
Ablation
Physics of laser compression of plasmas, 9: 11236 (R;GB)
Thermal Conduction
Physics of laser compression of plasmas, 9: 11236 (R;GB)
LASERS
Light Amplification by Stimulated Emission of Radiation.
See also FREE ELECTRON LASERS
GAS LASERS
Beam Pulsers
Improved beam processing for terrestrial solar cells, 9: 9655 (J;US)
LATTICE FIELD THEORY
Commutation Relations
Consistent formulation of fermions on a Minkowski lattice p, 9: 11111 (J;US)
LAWRENCE LIVERMORE LABORATORY
Electrical Equipment
Engineering study for an electrical power distribution system for Lawrence Livermore National Laboratory, 9: 9759 (R;US)
Maintenance procedures for an electrical power distribution system , 9: 10455 (R;US)
Program Management
A review of holographic nondestruction evaluation at Lawrence Livermore National Laboratory, 9: 10442 (J;US)
Test Facilities
A review of holographic nondestruction evaluation at Lawrence Livermore National Laboratory, 9: 10442 (J;US)
LEACHATES
Biological Effects
Composition and toxicity of solid waste leachates from industrial coal gasiifiers, 9: 9287 (BA;US)
Chemical Composition
Composition and toxicity of solid waste leachates from industrial coal gasiifiers, 9: 9287 (BA;US)
Multi-Element Analysis
Short- and long-term leaching of solid wastes from the H-coal coal liquefaction process, 9: 9281 (R;US)
Radiochemical Analysis
Some deficiencies in analyzing leachates and reporting results, 9: 9512 (J;US)
LEAD
Activation Analysis
Trace element analysis of biological materials: Complementarity of PIXE and NAA, 9: 10342 (J;US)
Biological Effects
Effects of metal compounds on chromosome length, 9: 10924 (R;SE)
Study of radionuclides interaction with hydrophytocenosis. Part of a coordinated programme on isotopic-tracer-aided research and monitoring on agricultural residue-biological interactions in aquatic ecosystems. Final report for the period 1 January 1977 - 3 June 1982, 9: 10848 (R;XA)
Charge State
Projectile charge state dependence of M-shell ionization of Au, Pb, Bi and U by 1.42-MeV/amu fluorine ions, 9: 11027 (J;US)
Consumption Rates
Battery-related wastes in the UK (United Kingdom) and their disposal, 9: 10146 (R;US)
Excitation
Angular distribution of Pb L x-rays excited by 3 MeV protons, 9: 11016 (J;US)
Inner-Shell Ionization
Projectile charge state dependence of M-shell ionization of Au, Pb, Bi and U by 1.42-MeV/amu fluorine ions, 9: 11027 (J;US)
Ion-Atom Collisions
Projectile charge state dependence of M-shell ionization of Au, Pb, Bi and U by 1.42-MeV/amu fluorine ions, 9: 11027 (J;US)
Study of binding energies and electron densities in superheavy quasiatoms by means of delta-ray spectroscopy, 9: 11000 (RA;DE;In German)
Materials Recovery
Battery-related wastes in the UK (United Kingdom) and their disposal, 9: 10146 (R;US)

PIXE Analysis
Large scale study of tooth enamel, 9: 10343 (J;US)
Trace element analysis of biological materials: Complementarity of PIXE and NAA, 9: 10342 (J;US)
X-Ray Spectra
Angular distribution of Pb L x-rays excited by 3 MeV protons, 9: 11016 (J;US)

LEAD 208 TARGET
Alpha Reactions
Folding model analysis of alpha-particle elastic scattering with a semirealistic density dependent effective interaction, 9: 11124 (R;US)
Research on giant resonances at high excitation energy by alpha particle inelastic scattering, 9: 11122 (R;FR;In French)
Study of giant resonances at high excitation energy by alpha inelastic scattering, 9: 11123 (R;FR;In French)
Proton Reactions
Clark et al. and McNeil et al. respond, 9: 11144 (J;US)

LEAD ISOTOPES
Isotope Ratio
Geochemical studies on the origin of the detrital pyrites in the conglomerates of the Witwatersrand Goldfields, South Africa, 9: 10969 (RA;US)

LEAD METHOD
See ISOTOPE DATING

LEAD OXIDES
Electrochemistry
A neutron powder diffraction study of α- and β-PbO_2 in the positive electrode material of lead-acid batteries, 9: 10374 (J;US)
Neutron Diffraction
A neutron powder diffraction study of α- and β-PbO_2 in the positive electrode material of lead-acid batteries, 9: 10374 (J;US)

LEAD SULFIDES
Lattice Parameters
Structure of the oxygen point defect in $SnMo_6S_8$ and $PbMo_6S_8$, 9: 10302 (J;US)
Point Defects
Structure of the oxygen point defect in $SnMo_6S_8$ and $PbMo_6S_8$, 9: 10302 (J;US)
Transition Temperature
Structure of the oxygen point defect in $SnMo_6S_8$ and $PbMo_6S_8$, 9: 10302 (J;US)

LEAD-ACID BATTERIES
Cathodes
A neutron powder diffraction study of α- and β-PbO_2 in the positive electrode material of lead-acid batteries, 9: 10374 (J;US)
Performance Testing
Testing and evaluation of advanced lead-acid batteries for utility load-leveling applications, 9: 9959 (J;US)

LEAK DETECTORS
Performance Testing
Leak rate measurements and detection systems, 9: 9883 (R;US)
Valves
Helium leak detector improved sensitivity speed choke, 9: 10444 (R;US)

LEASING
Bids
Modeling the number of bids received for outer continental shelf leases by Poisson-type models, 9: 9340 (J;US)
Environmental Impacts
Draft environmental impact statement: proposed polymetallic sulfide minerals lease offering, Gorda Ridge area offshore Oregon and northern California, 9: 10757 (R;US)

LED
See LIGHT EMITTING DIODES

LEGUMINOSAE
See also GLYCINE HISPIDA
PISUM
VICIA
Nitrogen Fixation
Aspects on the use of isotopes in studies of biological dinitrogen fixation by legumes, 9: 10792 (R;SE)

LENSES
Testing
Some advanced testing techniques for concentrator photovoltaic cells and lenses, 9: 9641 (J;US)

LEPTON-DEUTERON INTERACTIONS
See DEUTERIUM TARGET

LEPTON-NUCLEON INTERACTIONS
See also DEEP INELASTIC SCATTERING
Deep Inelastic Scattering
Cross section for inclusive deep inelastic scattering in the impulse approximation: scale invariance and mass problems, 9: 11077 (R;FR;In French)

LEPTONS
See also ELECTRONS
NEUTRINOS
Mass Spectra
Lepton and quark families as quantum-dynamical systems, 9: 11092 (R;XA)
Pair Production
Weak neutral currents in e^+e^- collisions at $\sqrt{s} = 29$ GeV, 9: 11062 (J;US)
Particle Properties
Lepton spectroscopy, 9: 11082 (R;US)
Quantum Field Theory
Lepton and quark families as quantum-dynamical systems, 9: 11092 (R;XA)

LET
Evaluation
Conceptual basis for evaluating risk from low-level radiation exposure, 9: 10839 (R;US)

LEVITATION
Incompressible Flow
Laminarization effects on the dynamics of a disk levitated by incompressible fluid flow, 9: 10424 (R;US)
Laminar Flow
Laminarization effects on the dynamics of a disk levitated by incompressible fluid flow, 9: 10424 (R;US)

LI-DRIFTED GE DETECTORS
Performance
Multidetector system for the search and investigation of high spin, high energy isomers produced in heavy ion induced nuclear reactions, 9: 10582 (R;FR)
Sensitivity
Semiconductor nuclear emission detector using at gamma activation analysis of the environmental objects, 9: 10597 (RA;SU;In Russian)
Spectra Unfolding
Method for improvement of gamma-transition cascade spectra amplitude resolution by computer processing of coincidence codes, 9: 10592 (R;SU;In Russian)

LIE GROUPS
Mathematical Operators
Derivation of the conventional basis for the classical Lie algebra generators, 9: 11093 (R;XA)

LIGHT EMITTING DIODES
Physical Radiation Effects
Radiation response of optical fibers and photodiode components with a view to nuclear data links, 9: 10290 (R;FR;In French)

LIGHT GUIDES
See OPTICAL FIBERS

LIGHT IONS
Whenever appropriate use one of the specific terms listed under ION BEAMS.
Surface Barrier Detectors
Single surface barrier detectors for neutron dosimetry and associated light-ion fluxes, 9: 10622 (J;US)

LIGHT NUCLEI
For nuclei with mass 1-40.

UNILAC
Beam Bunchers
A high efficiency bunching system for the TUNL polarized ion source, 9: 10549 (J;US)
Beam Bunching
The RF system for the Los Alamos free electron laser (FEL), 9: 10520 (J;US)
Beam Focusing Magnets
Alternate transport techniques for electron induction linacs, 9: 10528 (J;US)
Beam Transport
Alternate transport techniques for electron induction linacs, 9: 10528 (J;US)
Design
Low velocity acceleration with the RFQ linac structure, 9: 10554 (J;US)
Focusing
Alternate transport techniques for electron induction linacs, 9: 10528 (J;US)
Heavy Ion Accelerators
Heidelberger heavy ion postaccelerator, 9: 10480 (RA;DE;In German)
Ion Beams
Low velocity acceleration with the RFQ linac structure, 9: 10554 (J;US)
Klystrons
Experiments with very high power rf pulses at SLAC, 9: 10523 (J;US)
Positron Sources
Intense positron beams: linacs. Preworkshop copy, 9: 9530 (R;US)
Proton Beams
Low velocity acceleration with the RFQ linac structure, 9: 10554 (J;US)
Pulse Shapers
SORE - a pulse stretcher for the Saskatchewan 300-MeV linac, 9: 10530 (J;US)
Radiation Protection
Radiation safety at a neutron generator, 9: 10556 (J;US)
The health physics program at the National Bureau of Standards LINAC, 9: 10555 (J;US)
Resonators
Energy measurement using a resonator based time-of-flight system, 9: 10518 (J;US)
RF Systems
Experiments with very high power rf pulses at SLAC, 9: 10523 (J;US)
Time-of-Flight Spectrometers
Energy measurement using a resonator based time-of-flight system, 9: 10518 (J;US)
Uses
Resonance neutron radiography using an electron Linac, 9: 10535 (J;US)
Velocity
Low velocity acceleration with the RFQ linac structure, 9: 10554 (J;US)
X-Ray Spectra
Monte-Carlo calculations of forward directed bremsstrahlung produced by 20 and 45 MeV electrons on tungsten, 9: 11148 (R;US)
LINEAR ENERGY TRANSFER

Use of a model for the determination of actual lung volume in hypoxemic patients, 9: 10793 (R;FR;In French)
LURGI PROCESS
Economic Analysis
Economics of producing substitute natural gas from coal, 9: 9315 (BA;US)
Materials Testing
Critical study of materials for synthetic gas quench systems, 9: 9243 (BA;US)
LURGI SLAGGING PROCESS
Materials Testing
Critical study of materials for synthetic gas quench systems, 9: 9243 (BA;US)
LWR TYPE REACTORS
See WATER COOLED REACTORS
LYMPH NODES
Radionuclide Kinetics
Retention of uranium in the chest: implications of findings in vivo and postmortem, 9: 10896 (J;GB)
LYMPHOCYTES
Biological Radiation Effects
Changes in T and B lymphocyte activity with the radiation damage extent in nonuniform irradiation of mice, 9: 10872 (RA;CS;In Czech)

Role of DNA polymerase α in chromosomal aberration production by ionizing radiation, 9: 10783 (R;US)
Cell Differentiation
Status of pulmonary host defense in the neonatal sheep: cellular and humoral aspects, 9: 10829 (R;US)
Chromosomal Aberrations
Chromosome damage in peripheral lymphocytes from American thorium workers, 9: 10895 (J;GB)
Role of DNA polymerase α in chromosomal aberration production by ionizing radiation, 9: 10783 (R;US)
Genetic Radiation Effects
Chromosome damage in peripheral lymphocytes from American thorium workers, 9: 10895 (J;GB)
Mutation Frequency
Comparative mutagenesis of human cells in vitro and in vivo. Progress report and financial statement, 9: 10768 (R;US)

LYMPHOID CELLS
See LYMPHOCYTES

LYOLUMINESCENCE
Evaluation
Investigation of lyoluminescence techniques for application in radiation-protection dosimetry. Final report Jan 1980-Jan 1982, 9: 10351 (R;US)

M

MA 754
See NICKEL BASE ALLOYS

MA 956
See IRON BASE ALLOYS

MACHINE TOOLS
See also MILLING MACHINES
Mechanical Engineering Research Program. Quarterly progress report, April-June 1983, 9: 10441 (R;US)

MACROPHAGES
Age Dependence
Antigen presentation by peritoneal macrophages from young adult and old mice, 9: 10833 (J;US)
Biological Accumulation
Antigen presentation by peritoneal macrophages from young adult and old mice, 9: 10833 (J;US)
Cell Differentiation
Status of pulmonary host defense in the neonatal sheep: cellular and humoral aspects, 9: 10829 (R;US)

MAGNESIUM 24 REACTIONS
Fission
Fission of polonium, osmium, and erbium composite systems, 9: 11136 (J;US)

MAGNESIUM 24 TARGET
Oxygen 16 Reactions
Several applications of the DWBA diffractional model of quasi-elastic reactions induced by heavy ions, 9: 11128 (R;FR)

MAGNESIUM 26 REACTIONS
Fission
Fission of polonium, osmium, and erbium composite systems, 9: 11136 (J;US)

MAGNESIUM CARBONATES
See also ANKERITE
DOLOMITE
Thermal Energy Storage Equipment
Comparison of domestic olivine and European magnesite for electrically charged thermal energy storage, 9: 9952 (J;US)

MAGNESIUM CHLORIDES
Hysteresis
Hysteretic behavior of the diluted random-field Ising system Fe/sub 0.70/Mg/sub 0.30/Cl_2, 9: 10305 (J;US)

MAGNESIUM COMPOUNDS
See also MAGNESIUM CARBONATES
MAGNESIUM CHLORIDES
MAGNESIUM OXIDES
Radiosensitivity Effects
Effect of K, Mg salts of aspartic acid on neuromuscular activity of mice following chronic irradiation, 9: 10865 (RA;CS;In Slovak)

MAGNESIUM OXIDES
See also SPINELS
Physical Radiation Effects
Structural effects in neutron-irradiated low-activation ceramics, 9: 10268 (RA;US)
Swelling
Structural effects in neutron-irradiated low-activation ceramics, 9: 10268 (RA;US)

MAGNET COILS
Design
Design description of the helical field coils for the Advanced Toroidal Facility, 9: 11276 (R;US)
Poloidal field system design for the ZT-H reversed field pinch experiment, 9: 11318 (R;US)
Toroidal magnetic field system for a 2-MA reversed-field pinch experiment, 9: 11319 (R;US)
Optimization
Tandem mirror coil optimization studies, 9: 11330 (R;US)

MAGNET POLE PIECES
Conformal Mapping
Combined function magnet profile design, 9: 10492 (R;US)

MAGNETIC BREMSSTRAHLUNG
See SYNCHROTRON RADIATION

MAGNETIC COILS

MAGNETIC ENERGY STORAGE EQUIPMENT
Construction
30-MJ superconducting magnetic energy storage system for electric utility transmission stabilization, 9: 9942 (J;US)
Design
30-MJ superconducting magnetic energy storage system for electric utility transmission stabilization, 9: 9942 (J;US)
Installation
30-MJ superconducting magnetic energy storage system for electric utility transmission stabilization, 9: 9942 (J;US)

MAGNETIC FIELD CONFIGURATIONS
For pinch configurations, use the narrower terms of PINCH EFFECT.
See also MAGNETIC ISLANDS
MAGNETIC SURFACES
Computerized Simulation
Computer simulation of magnetic field circuits in ATF, 9: 11269 (R;US)
Energy Losses
Studies of neutral beam power loss in stray magnetic fields, 9: 11349 (J;US)

MAGNETIC FIELDS
See also FORCE-FREE MAGNETIC FIELDS
Biological Effects
Human reactions to ELF electric and magnetic fields: an annotated bibliography of current literature (3rd edition). Final report, 9: 10946 (R;US)

MAGNETIC ISLANDS
Magnetohydrodynamics
Island formation and destruction of flux surfaces in three-dimensional MHD equilibria, 9: 11328 (R;US)

MAGNETIC MIRROR CONFIGURATIONS
Research Programs
Magnetic fusion energy program. Final report (Technical summaries for 2 year research program), 9: 11237 (R;US)

MAGNETIC MIRROR TYPE REACTORS
See also FIELD-REVERSED MIRROR REACTORS
MARS REACTOR
TMR REACTORS
Damaging Neutron Fluence
Effect of polarized fusion on the neutronics of a mirror fusion reactor, 9: 11346 (J;US)
Polarization
Effect of polarized fusion on the neutronics of a mirror fusion reactor, 9: 11346 (J;US)
Reviews
Status of the Magnetic Fusion Energy Programme, 9: 11281 (R;US)
Superconducting Magnets
Superconducting (radiation hardened) magnets for mirror fusion devices, 9: 11340 (R;US)

Thermonuclear Reactions
Effect of polarized fusion on the neutronics of a mirror fusion reactor, 9: 11346 (J;US)

MAGNETIC MONOPOLES
Cosmic Ray Detection
Upper limit on flux of cosmic-ray monopoles obtained with a three-loop superconductive detector, 9: 10981 (J;US)
Mass
Scales and upper bounds of classical monopole solutions, 9: 11090 (R;US)
Scattering
Magnetic monopoles and baryon decay, 9: 11072 (R;XA)

MAGNETIC REFRIGERATORS
Design
The effect of parasitic refrigeration on the efficiency of magnetic liquefiers, 9: 10415 (J;US)
Energy Efficiency
The effect of parasitic refrigeration on the efficiency of magnetic liquefiers, 9: 10415 (J;US)

MAGNETIC SPECTROMETERS
Calibration
Magnetic spectrometer of the "Deuteron" device based on multiwire proportional chambers, 9: 10577 (R;SU;In Russian)
Multiwire Proportional Chambers
Magnetic spectrometer of the "Deuteron" device based on multiwire proportional chambers, 9: 10577 (R;SU;In Russian)
Specifications
Magnetic spectrometer of the "Deuteron" device based on multiwire proportional chambers, 9: 10577 (R;SU;In Russian)

MAGNETIC STORAGE DEVICES
Fabrication
Program of research on microfabrication techniques for vlsi magnetic devices. Interim progress report 30 Sep 1981-29 Sep 1982, 9: 10446 (R;US)

MAGNETIC SURFACES
Plasma Drift
Effect of a field structure on the particle behaviour in magnetic traps. Orthogonality condition, 9: 11295 (R;SU;In Russian)

MAGNETOACOUSTIC WAVES
Resonance
Interaction of MHD waves with a plasma surrounded by a cold gas-mantle, 9: 11246 (R;SE)

MAGNETOHYDRODYNAMIC GENERATORS
See MHD GENERATORS

MAGNETOHYDRODYNAMIC WAVES
See HYDROMAGNETIC WAVES

MAGNETOHYDRODYNAMICS
Three-Dimensional Calculations
Review of time-dependent, three-dimensional resistive magnetohydrodynamic calculations, 9: 11215 (RA;AU)

MAGNETOSONIC WAVES
See MAGNETOACOUSTIC WAVES

MAGNETOSPHERE
See also MAGNETOTAIL
Electric Fields
Ion and electron injection in ionosphere and magnetosphere. Application to the parallel electric field measurement in auroral zones, 9: 10983 (R;FR;In French)
Magnetic Storms
Particle and field signatures of substorms in the near magnetotail, 9: 10986 (R;US)
Plasma Diagnostics
Electron distributions in the plasmas of the earth's magnetosphere - an experiment for AMPTE-UKS, 9: 10987 (R;GB)

MAGNETOTAIL
Electric Fields
Inductive electric fields in the magnetotail and their relation to auroral and substorm phenomena, 9: 10988 (R;SE)
Electron Density
Particle and field signatures of substorms in the near magnetotail, 9: 10986 (R;US)
Magnetic Field Configurations
Particle and field signatures of substorms in the near magnetotail, 9: 10986 (R;US)

MAGNETS
Magnetic Properties
Magnetic properties of the iron laminations for CBA magnets, 9: 10527 (J;US)

MAHOGANY TREES
See TREES

MAIZE
Liquefaction
Analysis of a process for converting biomass to diesel fuel, 9: 9539 (R;US)
Marketing Research
Market analyses relative to the Renewable Energy, Inc. ethanol plant feasibility study, 9: 9545 (R;US)

MAKI PARAMETER
See GINZBURG-LANDAU THEORY

MALARIA
Vaccines
Characterization of sporozoite surface antigens of Plasmodium falciparum, using monoclonal antibodies. Part of a coordinated programme on the preparation of irradiated vaccines against some human diseases. Final report for the period 1 October 1980 - 31 August 1982, 9: 10836 (R;XA)

MALIGNANCIES
See NEOPLASMS

MAMMARY GLANDS
Biomedical Radiography
Mammographic phantom evaluation project, 9: 10805 (R;US)

MAN
All of mankind, of any age or of either sex.
Radiation Doses
Oral intake of radionuclides in the population. A review of biological factors of relevance for assessment of absorbed dose at long term waste storage, 9: 10847 (R;SE)

MANGANESE
Activation Analysis
Trace element analysis of biological materials: Complementarity of PIXE and NAA, 9: 10342 (J;US)
Biological Effects
Effects of metal compounds on chromosome length, 9: 10924 (R;SE)
Chemical State
Quantitative electron spin resonance (ESR) determinations of forms and total amounts of Mn in aqueous environmental samples, 9: 10747 (J;GB)
Ecological Concentration
Concentration of heavy metals in water plants of some Austrian running waters, 9: 10932 (R;AT;In German.)
Electron Spin Resonance
Quantitative electron spin resonance (ESR) determinations of forms and total amounts of Mn in aqueous environmental samples, 9: 10747 (J;GB)
Geochemistry
The oxidation state diagram--a potential tool for studying redox chemistry in seawater, 9: 10731 (J;NL)
PIXE Analysis
Large scale study of tooth enamel, 9: 10343 (J;US)
Trace element analysis of biological materials: Complementarity of PIXE and NAA, 9: 10342 (J;US)
Water Chemistry
The oxidation state diagram--a potential tool for studying redox chemistry in seawater, 9: 10731 (J;NL)
X-Ray Spectroscopy
Local structure of manganese in the photosynthetic apparatus and superoxide dismutase: an x-ray absorption study, 9: 10772 (R;US)

MANGANESE ALLOYS

MONEL 400
STAINLESS STEEL-Z2CN18-10
Spin Glass State
Spin correlations and reentrant spin-glass behavior in amorphous Fe-Mn alloys: Statics, 9: 10249 (J;US)

MANGANESE FLUORIDES
Photoelectron Spectroscopy
X-ray-photoelectron final-state screening in transition-metal compounds, 9: 10301 (J;US)

MANHATTAN PROJECT
Historical Aspects
Investigation of Witwatersrand uranium-bearing quartz-pebble conglomerates in 1944-1945, 9: 9422 (RA;US)
MANUFACTURERS
Energy Demand
An analysis of industrial demand for natural gas, 9: 9370 (J;GB)
MANURES
Anaerobic Digestion
Semi-liquid manure treatment, energy engineering and preservation of feeding stuffs, 9: 9591 (R;DE;In German)
MAPPING (TOPOLOGICAL)
See TOPOLOGICAL MAPPING
MARCOULE PHENIX REACTOR
See PHENIX REACTOR
MARINE ECOSYSTEMS
See AQUATIC ECOSYSTEMS
MARITIME TRANSPORT
Accidents
Environmental risks of oil and coal transport at sea. A comparative study., 9: 9284 (R;SE;In Swedish)
MARS REACTOR
Radioactivation
Comparison of activation in STARFIRE and MARS first-walls, 9: 11293 (R;US)
Reactor Fueling
Calculation of density profiles in tandem mirrors fueled by pellets, 9: 11334 (R;US)
Transport Theory
Calculation of density profiles in tandem mirrors fueled by pellets, 9: 11334 (R;US)
MASS SPECTROMETERS
Beryllium 10
Improvement in an accelerator based mass spectrometer for measuring ^{10}Be, 9: 10552 (J;US)
CRNL Mp Tandem Accelerator
Improvement in an accelerator based mass spectrometer for measuring ^{10}Be, 9: 10552 (J;US)
MASS SPECTROSCOPY
Glow discharge as an atomization and ionization device. Progress report, November 1, 1982-November 1, 1983, 9: 10312 (R;US)
MASSACHUSETTS
Coastal Waters
Near-surface measurements of quasi-Lagrangian velocities in open water, 9: 10973 (J;US)
Households
Responses to changing energy conditions among Massachusetts households, 9: 10087 (J;GB)
MASSLESS PARTICLES

Midwest Appropriate Technology Small Grants Program project summaries, 9: 9977 (R;US)
Geologic History
Basal conglomerates and weathered zones in the Marquette Range Supergroup, Northern Peninsula of Michigan - Age, indications of atmospheric oxygen, and uranium potential, 9: 10958 (RA;US)
Geological Surveys
Basal conglomerates and weathered zones in the Marquette Range Supergroup, Northern Peninsula of Michigan - Age, indications of atmospheric oxygen, and uranium potential, 9: 10958 (RA;US)
MICROBIAL PROCESSES
See ANAEROBIC DIGESTION
MICROCOCCUS
Sublethal Irradiation
Repair of radiation damage of Micrococcus radioproteolyticus due to gamma and UV irradiation, 9: 10856 (RA;CS;In Czech)
MICROSCOPES
Mechanical Engineering Research Program. Quarterly progress report, April-June 1983, 9: 10441 (R;US)
MICROSCOPY
X Radiation
X-ray holographic microscopy experiments at the Brookhaven synchrotron light source, 9: 10628 (R;US)
MICROTRONS
Energy Losses
Effect of synchrotron radiation in the proposed 4-GeV Argonne microtron, 9: 10529 (J;US)
Performance
Two years of FJFI microtron operation, 9: 10481 (RA;CS;In Czech)
Synchrotron Radiation
Effect of synchrotron radiation in the proposed 4-GeV Argonne microtron, 9: 10529 (J;US)
MICROWAVE AMPLIFIERS
Windows
Infrared monitoring of gyrotron windows, 9: 11279 (R;US)
MICROWAVE EQUIPMENT
See also MICROWAVE AMPLIFIERS
Cavity launchers for ICRF, 9: 11292 (R;US)
MFTF-B quasi-optical ECRH transmission system, 9: 11338 (R;US)
Integrated Circuits
Dielectric resonators for use in microwave and millimeter-wave gaas circuits. Memorandum report, 9: 10448 (R;US)
Resonators
Dielectric resonators for use in microwave and millimeter-wave gaas circuits. Memorandum report, 9: 10448 (R;US)
MICROWAVE RADIATION
Wave Propagation
High power microwave generation from a virtual cathode oscillator (Viracator), 9: 10498 (J;US)
Physical modeling of EM propagation over nonhomogeneous terrain, 9: 10456 (R;US)
MIGRATION (RADIONUCLIDE)
See RADIONUCLIDE MIGRATION
MILITARY FACILITIES
Noise Pollution Control
Acoustical benefits resulting from insulation and air leakage control in family housing units. Final report Jul 1981-Sep 1982, 9: 10056 (R;US)
MILL TAILINGS
Liners
Uranium mill tailings remedial action project (UMITRAP) - Cover and liner technology development project, 9: 9507 (BA;XA)
Radiation Monitoring
Counting system and resultant data from field determinations of ^{226}Ra at twelve uranium mill tailings sites, 9: 10721 (BA;XA)
Finding and evaluating potential radiological problems in the vicinity of uranium milling sites, 9: 9516 (BA;XA)
Radioactive Waste Disposal
Uranium mill tailings remedial action project (UMITRAP) - Cover and liner technology development project, 9: 9507 (BA;XA)
Radioactive Waste Management
Tailings technology. Decommissioning and rehabilitation remedial action technology development, 9: 9505 (BA;XA)
Technology development effort of the uranium mill tailings remedial actions project, 9: 9506 (BA;XA)
Radioactive Wastes
Management of uranium mill tailings in the United States of America, 9: 9504 (BA;XA)
MILLING MACHINES
Modifications
Reduction in metal consumption by the use of alternating lines of higher and lower lifter bars in a rod mill, 9: 10145 (R;US)
MINE-MOUTH GENERATING PLANTS
See COAL MINES
FOSSIL-FUEL POWER PLANTS
MINERS
Chronic Exposure
Lung cancer epidemiology in New Mexico uranium miners. First annual report, 1 April 1983-1 January 1984, 9: 10845 (R;US)
Medical Surveillance
Lung cancer epidemiology in New Mexico uranium miners. First annual report, 1 April 1983-1 January 1984, 9: 10845 (R;US)
Occupational Diseases
Lung cancer epidemiology in New Mexico uranium miners. First annual report, 1 April 1983-1 January 1984, 9: 10845 (R;US)
Pathology
Lung cancer epidemiology in New Mexico uranium miners. First annual report, 1 April 1983-1 January 1984, 9: 10845 (R;US)
Protective Clothing
Noise attenuating properties of earmuffs worn by miners. Volume 1. Comparison of earmuff attenuation as measured by psychophysical and physical methods. Open file report (final) Jan-Oct 1979, 9: 10702 (R;US)
Noise attenuating properties of earmuffs worn by miners. Volume 2. Development of a laboratory procedure for the physical measurement of earmuff attenuation. Open file report 1 Jul 1979-30 Jun 1980, 9: 10952 (R;US)
MINING
See also COAL MINING
SURFACE MINING
UNDERGROUND MINING
Environmental Impacts
Draft environmental impact statement: proposed polymetallic sulfide minerals lease offering, Gorda Ridge area offshore Oregon and northern California, 9: 10757 (R;US)
MINNESOTA
Energy Policy
Midwest Appropriate Technology Small Grants Program project summaries, 9: 9977 (R;US)
MIRROR ADVANCED REACTOR STUDY
See MARS REACTOR

MIRROR FUSION TEST FACILITY
See MFTF DEVICES
MIRRORS
Glazing Materials
Solar Thermal Technology Program: polymer synthesis and characterization subtask. Annual progress report, FY 1983, 9: 9723 (R;US)
MISCIBLE FLOODING
See MISCIBLE-PHASE DISPLACEMENT
MISCIBLE-PHASE DISPLACEMENT
See also CARBON DIOXIDE INJECTION
Bench-Scale Experiments
Determination of miscibility pressure direct observation method. Final report, 9: 9326 (R;US)
MISGURNUS
See FISHES
MIST-LIFT CYCLES
Droplets
Vapor/droplet coupling and the mist flow (OTEC) cycle, 9: 9691 (J;US)
Vapors
Vapor/droplet coupling and the mist flow (OTEC) cycle, 9: 9691 (J;US)
MIXED-FUNCTION OXIDASE SYSTEMS
See MIXED-FUNCTION OXIDASES
MIXED-FUNCTION OXIDASES
Biosynthesis
Role of toxicological interactions in chemical carcinogenesis, 9: 10919 (R;US)
MMS
See METHYL METHANESULFONATE
MNU
See METHYL NITROSOUREA
MODELS (MATHEMATICAL)

MOLECULAR BEAMS
Scattering
Mound activities in chemical and physical research: January-June 1983, 9: 9527 (R;US)
MOLECULAR IONS
Coordinate the above descriptor with a descriptor for the specific ion.
See also HYDROGEN IONS 2 PLUS
Ion-Molecule Collisions
Proton transfer from the formyl and isoformyl positive ions to acetylene, 9: 10364 (J;US)
MOLTEN CARBONATE FUEL CELLS
Prior to June 1980 this information was indexed with the descriptors HIGH-TEMPERATURE FUEL CELLS + MOLTEN SALTS + CARBONATES.
Load Management
Application of advanced fuel cells for utility load leveling, 9: 10049 (J;US)
MOLTEN SALT COOLANTS
See MOLTEN SALTS
MOLTEN SALT REACTORS
Reactor Materials
Studies of materials for molten salt nuclear applications, 9: 9789 (R;FR)
Reviews
Results of and prospects for studies on molten salt nuclear reactors, 9: 9788 (R;FR;In French, English)
MOLTEN SALTS
Catalytic Effects
Molten salt catalysis. Selective bond cleavage reactions for some α,ω-diphenylalkanes in $SbCl_3$ melts, 9: 10368 (J;US)
Corrosive Effects
Crack tip oxidation of a superalloy in molten nitrate salt, 9: 9690 (J;US)
Studies of materials for molten salt nuclear applications, 9: 9789 (R;FR)
The effect of a molten nitrate salt environment on the mechanical properties of INCOLOY Alloy 800 (60% NaNO3-40% KNO3), 9: 10259 (J;US)
Incinerators
Molten salt destruction of hazardous materials process and data update, 9: 10654 (R;US)
MOLTING
Biochemistry
Control of molting in crustacea, 9: 10763 (R;US)
MOLYBDENUM
Activation Analysis
Simultaneous determination of Cd, Cu, Mo, Zn in biological samples using neutron activation analysis combined with radiochemical separation, 9: 10322 (RA;CS;In Czech)
Trace element analysis of biological materials: Complementarity of PIXE and NAA, 9: 10342 (J;US)
Emission Spectroscopy
Inductively coupled plasma-atomic emission spectrometry (ICP-AES) in support of nuclear waste management, 9: 10311 (R;US)
PIXE Analysis
Trace element analysis of biological materials: Complementarity of PIXE and NAA, 9: 10342 (J;US)
Sputtering
Structural and electronic properties of artificial metallic superlattices, 9: 10224 (R;US)
Superlattices
Structural and electronic properties of artificial metallic superlattices, 9: 10224 (R;US)
MOLYBDENUM ALLOYS
See also ALLOY-RA-333
INCONEL 617
MOLYBDENUM BASE ALLOYS
STAINLESS STEEL-316
Annealing
Intermetallic compound structure and phase transformations in zirconium based alloys during the annealing and under irradiation with the electron pulsed beam, 9: 10238 (RA;SU;In Russian)
Creep
Evaluation of ferritic alloy Fe-2 1/4Cr-1Mo after neutron irradiation - irradiation creep and swelling, 9: 10230 (R;US)
Hardness
Effects of HFIR irradiation at 55°C on the microstructure and toughness of HT-9 and 9Cr-1Mo, 9: 10229 (R;US)
Microstructure
Effects of HFIR irradiation at 55°C on the microstructure and toughness of HT-9 and 9Cr-1Mo, 9: 10229 (R;US)
Permeability
Evaluation of CO_2 and CO dopants in hydrogen to reduce hydrogen permeation in the Stirling engine heater heat tube alloy CG-27 (36Ni-13Cr-5.5Mo-2.6Ti-1.7Al-bal Fe), 9: 10183 (R;US)
Physical Radiation Effects
Evaluation of ferritic alloy Fe-2 1/4Cr-1Mo after neutron irradiation - irradiation creep and swelling, 9: 10230 (R;US)
Intermetallic compound structure and phase transformations in zirconium based alloys during the annealing and under irradiation with the electron pulsed beam, 9: 10238 (RA;SU;In Russian)
Swelling
Evaluation of ferritic alloy Fe-2 1/4Cr-1Mo after neutron irradiation - irradiation creep and swelling, 9: 10230 (R;US)
MOLYBDENUM BASE ALLOYS
Physical Radiation Effects
High temperature radiation-induced embrittlement of some alloys on refractory metal base, 9: 10243 (R;SU;In Russian)
MOLYBDENUM COMPOUNDS
See also MOLYBDENUM SULFIDES
Photochemistry
Photochemical studies of bis(dibenzoylmethanato)dioxomolybdenum, 9: 10381 (J;US)
MOLYBDENUM SULFIDES
Lattice Parameters
Structure of the oxygen point defect in $SnMo_6S_8$ and $PbMo_6S_8$, 9: 10302 (J;US)
Point Defects
Structure of the oxygen point defect in $SnMo_6S_8$ and $PbMo_6S_8$, 9: 10302 (J;US)

Transition Temperature
Structure of the oxygen point defect in $SnMo_6S_8$ and $PbMo_6S_8$, 9: 10302 (J;US)
MONEL
Degassing
Vacuum outgassing of various materials, 9: 10445 (R;US)
MONEL 400
Coatings
Measurement of thermal conductivity of the oxide coating on autoclaved monel-400, 9: 10264 (R;IN)
MONITORED RETRIEVABLE STORAGE
Capitalized Cost
Impact of TRU waste storage on a stand-alone MRS facility, 9: 9477 (R;US)
Comparative Evaluations
Comparison of cask and dry well storage concepts for a stand-alone monitored retrievable storage/interim storage system, 9: 9476 (R;US)
Design
Comparison of cask and dry well storage concepts for a stand-alone monitored retrievable storage/interim storage system, 9: 9476 (R;US)
Impact of TRU waste storage on a stand-alone MRS facility, 9: 9477 (R;US)
Operating Cost
Impact of TRU waste storage on a stand-alone MRS facility, 9: 9477 (R;US)
MONITORING
Use of a more specific term is recommended.

MOTOR INNS
See HOTELS
MOULTING
See MOLTING
MOUND LABORATORY
Air Pollution
Mound activities in chemical and physical research: January-June 1983, 9: 9527 (R;US)
MUCOPOLYSACCHARIDES
Biological Radiation Effects
Neurosecretion in hypothalamus of sheep following chronic irradiation, 9: 10880 (RA;CS;In Slovak)
MULTI-CHANNEL ANALYZERS
Data Acquisition Systems
Controller of multichannel pulse analyzer in CAMAC system, 9: 10630 (R;SU;In Russian)
MULTILAMELLAR LIPID VESICLES
See LIPOSOMES
MULTIWIRE DRIFT CHAMBERS
See DRIFT CHAMBERS
MULTIWIRE PROPORTIONAL CHAMBERS
See also DRIFT CHAMBERS
CAMAC System
Data readout system for the "Hyperon" spectrometer proportional chambers based on the K405KhP1 hydrid microcircuit, 9: 10588 (R;SU;In Russian)
Data Processing
Data readout system for the "Hyperon" spectrometer proportional chambers based on the K405KhP1 hydrid microcircuit, 9: 10588 (R;SU;In Russian)
Readout Systems
Data readout system for the "Hyperon" spectrometer proportional chambers based on the K405KhP1 hydrid microcircuit, 9: 10588 (R;SU;In Russian)
Time Resolution
Fast multiwire proportional chambers for low-background separation of muon stops in a liquid tritium tarqet, 9: 10590 (R;SU;In Russian)
MUNICH CYCLOTRON
RF Systems
The rf-system for SUSE, 9: 10521 (J;US)
MUNICIPAL WASTES
Gasification
Disposal of solid wastes with simultaneous energy recovery, 9: 10167 (R;US)
MUON DETECTION
Multiwire Proportional Chambers
Fast multiwire proportional chambers for low-background separation of muon stops in a liquid tritium tarqet, 9: 10590 (R;SU;In Russian)
Wide Gap Spark Chambers
Possibility of improving the multilayered detector energy resolution, 9: 10579 (R;SU)
MUON REACTIONS
Deep Inelastic Scattering
Measurement of the nucleon structure function in iron using 215- and 93-GeV muons, 9: 11063 (J;US)
Fusion Reactions
Experimental investigation of muon-catalyzed d-t fusion, 9: 11342 (J;US)
MUONS PLUS
Weak Particle Decay
Search for right-handed currents in muon decay, 9: 11057 (R;US)
MUTAGENESIS
Biochemistry
Comparative mutagenesis of human cells in vitro and in vivo. Progress report and financial statement, 9: 10768 (R;US)
Functional Models
Comparative mutagenesis of human cells in vitro and in vivo. Progress report and financial statement, 9: 10768 (R;US)
Molecular Biology
Quantitative and molecular analyses of mutation in a pSV2gpt transformed CHO cell line, 9: 10843 (R;US)
MUTANTS
Plant Breeding
Efficiency of mutation programmes, 9: 10853 (RA;XA)
MWPC

LIQUEFIED NATURAL GAS
Combustion
Inspection and tuning of reciprocating engines, 9: 9389 (BA;US)
Compressibility
Gas supercompressibility factor correlation research, 9: 9408 (BA;US)
Measurements and improved prediction method of compressibility factors in custody transfer situations, 9: 9409 (BA;US)
Energy Demand
An analysis of industrial demand for natural gas, 9: 9370 (J;GB)
Equations of State
Application of a new equation of state to study the retrograde condensation of two natural gases (Developed Redlich-Kwong equation), 9: 9404 (BA;US)
Modelling the thermodynamic properties of natural gases in the region of retrograde condensation (90 mol % methane, 10 mol % heptane, at 275 to 375 K and 1 to 30 MPa), 9: 9410 (BA;US)
Information Systems
System development/operation and data collection/reconciliation for forms EIA-23 and EIA-64A. Final report: 1979 report year processing, May 15, 1980-May 15, 1981, 9: 9335 (R;US)
Laser Spectroscopy
BAGI: a new concept for detecting and tracking hazardous gases, 9: 10336 (R;US)
Market
Gas technology base needs in an era of growing energy service competition, 9: 9371 (BA;US)
Natural gas monthly, 9: 9369 (R;US)
Recent market activities of major interstate pipeline companies, 9: 9355 (R;US)
Meetings
1983 international gas research conference, 9: 9385 (B;US;In English and French)
Metering
Buckling and eccentricity effects on orifice metering accuracy, 9: 9390 (BA;US)
Gas orifice meter performance with new mass flow reference system, 9: 9392 (BA;US)
Odorization
Odor and odorization: relationship between complaints and odorant concentrations - a study in the field (In French), 9: 9365 (BA;US;FR)
Risk-benefit analysis of improved gas odorants, 9: 9368 (BA;US)
Pipelines
Recent market activities of major interstate pipeline companies, 9: 9355 (R;US)
Pneumatic Transport
Systems analysis of hydrogen supplementation in natural gas pipelines, 9: 9534 (BA;US)
Production
Gulf of Mexico summary report, 9: 9327 (R;US)
System development/operation and data collection/reconcilation for forms EIA-23 and EIA-64A. Final closeout report, July 15, 1978-September 30, 1981, 9: 9334 (R;US)
Research Programs
Gas technology base needs in an era of growing energy service competition, 9: 9371 (BA;US)
Reserves
Gulf of Mexico summary report, 9: 9327 (R;US)
System development/operation and data collection/reconcilation for forms EIA-23 and EIA-64A. Final closeout report, July 15, 1978-September 30, 1981, 9: 9334 (R;US)
Thermodynamic Properties
1983 international gas research conference, 9: 9385 (B;US;In English and French)
Modelling the thermodynamic properties of natural gases in the region of retrograde condensation (90 mol % methane, 10 mol % heptane, at 275 to 375 K and 1 to 30 MPa), 9: 9410 (BA;US)
Transport
Analytical prediction of crack growth in polyethylene pipes, 9: 9393 (BA;US)
Influence of mechanical damage on transmission pipeline integrity, 9: 9388 (BA;US)
NATURAL GAS APPLIANCES
See GAS APPLIANCES
NATURAL GAS DEPOSITS
Evaluation
The Department of Energy's western gas sands project multiwell experiment update (Colorado), 9: 9381 (J;US)
Exploitation
A new approach to air-hole interpretation in the Canyon Sands of Central Texas, 9: 9360 (J;US)
Gulf of Mexico summary report (Contains glossary), 9: 9327 (R;US)
Multi-well experiment: a field laboratory for tight gas sands, 9: 9363 (J;US)
The Department of Energy's western gas sands project multiwell experiment update (Colorado), 9: 9381 (J;US)
Exploration
Gulf of Mexico summary report (Contains glossary), 9: 9327 (R;US)
Offshore in-situ testing techniques, 1983, 9: 9322 (R;US)
Fractures
Determination of in-situ stress from anelastic strain recovery measurements of oriented core, 9: 9378 (J;US)
Geophysical Surveys
A new approach to air-hole interpretation in the Canyon Sands of Central Texas, 9: 9360 (J;US)
Multi-well experiment: a field laboratory for tight gas sands, 9: 9363 (J;US)
Leasing
Modeling the number of bids received for outer continental shelf leases by Poisson-type models, 9: 9340 (J;US)
Offshore Sites
Offshore in-situ testing techniques, 1983, 9: 9322 (R;US)

Resource Assessment
Western Gas Sands Subprogram. Status report, October-November-December 1982, 9: 9374 (R;US)
Resource Development
Gas technology base needs in an era of growing energy service competition, 9: 9371 (BA;US)
Unconventional gas: recent R and D advances, 9: 9380 (BA;US)
Stress Analysis
Determination of in-situ stress from anelastic strain recovery measurements of oriented core, 9: 9378 (J;US)
NATURAL GAS DISTRIBUTION SYSTEMS
Compressors
Inspection and tuning of reciprocating engines, 9: 9389 (BA;US)
Computerized Control Systems
Development of intelligent gasmeter for customer's total safety (Japan), 9: 9402 (BA;US)
Introduction of fault tolerance into digitally controlled gas regulators, 9: 9386 (BA;US)
Computerized Simulation
Simulation in the design of gas pressure control equipment, 9: 9387 (BA;US)
Pipelines
1983 international gas research conference, 9: 9385 (B;US;In English and French)
A.G.A. Pipeline Research Committee research into control of defects, corrosion, and defect repair, 9: 9403 (BA;US)
Finite element analysis of stress concentration effects in plastic pipelines, 9: 9394 (BA;US)
Present situation and future developments of corrosion protection coatings used by the gas industry in France - characteristics and evaluation of performances (In French), 9: 9401 (BA;US;FR)
Statistics of interstate natural gas pipeline companies, 1982, 9: 9383 (R;US)
Pressure Regulators
Simulation in the design of gas pressure control equipment, 9: 9387 (BA;US)
Safety
Development of intelligent gasmeter for customer's total safety (Japan), 9: 9402 (BA;US)
NATURAL GAS FUEL CELLS
Load Management
Application of advanced fuel cells for utility load leveling, 9: 10049 (J;US)
NATURAL GAS GATHERING SYSTEMS

Technology Assessment
Improved utilisation of gaseous fuels: overview of technological developments, 9: 9415 (BA;US)
Technology Transfer
Gas technology products: from research to successful market introduction, 9: 9372 (BA;US)
NATURAL GAS WELLS
Fluid Injection
Use of foaming agents to alleviate liquid loading in Greater Green River TFG wells, 9: 9362 (J;US)
Hydraulic Fracturing
A case study of the Wilcox (Lobo) trend in Webb and Zapata counties, Texas, 9: 9375 (J;US)
A comprehensive fracture diagnostics instrumentation fielding program, 9: 9379 (J;US)
Determination of in-situ stress from anelastic strain recovery measurements of oriented core, 9: 9378 (J;US)
Evaluation of stimulation treatments in Appalachian tight gas sands, 9: 9376 (J;US)
State of the art hydraulic fracture stimulation treatment for a western tight sand reservoir (Wyoming), 9: 9382 (J;US)
The Department of Energy's western gas sands project multiwell experiment update (Colorado), 9: 9381 (J;US)
Western Gas Sands Subprogram. Status report, October-November-December 1982, 9: 9374 (R;US)
Production
Decline curve analysis in fractured low permeability gas wells in the Piceance Basin, 9: 9361 (J;US)
Fractured shale gas reservoir performance study--An offset well interference field test, 9: 9366 (J;US)
The effect of stress-dependent permeability on gas production and well testing, 9: 9367 (J;US)
Unsteady-state pressure response due to production with a slotted liner completion, 9: 9329 (J;US)
Western Gas Sands Subprogram. Status report, October-November-December 1982, 9: 9374 (R;US)
Testing
Fractured shale gas reservoir performance study--An offset well interference field test, 9: 9366 (J;US)
The Department of Energy's western gas sands project multiwell experiment update (Colorado), 9: 9381 (J;US)
The effect of stress-dependent permeability on gas production and well testing, 9: 9367 (J;US)
Western Gas Sands Subprogram. Status report, October-November-December 1982, 9: 9374 (R;US)
Water Influx
Use of foaming agents to alleviate liquid loading in Greater Green River TFG wells, 9: 9362 (J;US)
Well Drilling
Needs in drilling technology research and development, 9: 9328 (R;US)
The Department of Energy's western gas sands project multiwell experiment update (Colorado), 9: 9381 (J;US)
Well Logging
The Department of Energy's western gas sands project multiwell experiment update (Colorado), 9: 9381 (J;US)
Well Pressure
Fractured shale gas reservoir performance study--An offset well interference field test, 9: 9366 (J;US)
Western Gas Sands Subprogram. Status report, October-November-December 1982, 9: 9374 (R;US)
Well Servicing
Unsteady-state pressure response due to production with a slotted liner completion, 9: 9329 (J;US)
Use of foaming agents to alleviate liquid loading in Greater Green River TFG wells, 9: 9362 (J;US)
Well Stimulation
The Mancos Formation: an evaluation of the interaction of geological conditions, treatment characteristics and production (Colorado), 9: 9377 (J;US)
NAVAL RESEARCH LABORATORY
Cyclotrons
Radiation safety at a neutron generator, 9: 10556 (J;US)
Linear Accelerators
Radiation safety at a neutron generator, 9: 10556 (J;US)
Neutron Sources

NEODYMIUM
Emission Spectroscopy
Inductively coupled plasma-atomic emission spectrometry (ICP-AES) in support of nuclear waste management, 9: 10311 (R;US)
Inner-Shell Ionization
L-shell ionization cross sections of Ba, Ce, Nd, Sm and Dy for proton energies from 0.5 to 2.0 MeV, 9: 11025 (J;US)
Ion-Atom Collisions
L-shell ionization cross sections of Ba, Ce, Nd, Sm and Dy for proton energies from 0.5 to 2.0 MeV, 9: 11025 (J;US)
NEODYMIUM LASERS
Amplifiers
Flow visualizations, velocity measurements, and surface convection measurements in simulated 20.8-cm Nova box amplifier cavities, 9: 11331 (R;US)
NEON
Atom-Molecule Collisions
Influence of collisions with noble gases on spectral lines of hydrogen isotopes, 9: 11006 (R;NL)
Ion-Atom Collisions
Multiple ionisation and electron capture in 2 MeV/u Brsup(n+) -> Ne collisions, 9: 10995 (RA;DE;In German)
Vacuum ultraviolet emission following impact of Li^+ and He^+ on He and Ne at 5-30 keV, 9: 11022 (J;US)
Thermal Conductivity
Mound activities in chemical and physical research: January-June 1983, 9: 9527 (R;US)
NEON 20 REACTIONS
Compound-Nucleus Reactions
Beta decay of ^{75}Rb to low-lying levels in ^{75}Kr, 9: 11126 (J;US)
NEONATES
Comparative Evaluations
Can information on the gastrointestinal absorption of actinide elements by neonatal rats, guinea pigs, dogs and swine be extrapolated to man?, 9: 10902 (J;GB)
Radionuclide Kinetics
^{239}Pu metabolism in newborn and weanling pigs, 9: 10891 (J;GB)
NEOPLASMS
See also CARCINOMAS
SARCOMAS
Epidemiology
An update of epidemiologic studies of plutonium workers, 9: 10899 (J;GB)
Lung cancer epidemiology in New Mexico uranium miners. First annual report, 1 April 1983-1 January 1984, 9: 10845 (R;US)
Pathology
Lung cancer epidemiology in New Mexico uranium miners. First annual report, 1 April 1983-1 January 1984, 9: 10845 (R;US)
Radioinduction
Dose-response relationships for bone cancers from plutonium in dogs and people, 9: 10900 (J;GB)
Influence of late radiation effects on the immunological parameters of aging. Final technical report, September 1977-August 1983, 9: 10846 (R;US)
Skeletal retention and distribution of ^{226}Ra and ^{239}Pu in beagles injected at ages ranging from 2 days to 5 years, 9: 10906 (J;GB)
Radiotherapy
Intense neutron source development for use in cancer therapy, 9: 10822 (J;US)
On achieving a clinically useful D-T neutron isocentric therapy system, 9: 10819 (J;US)
Particle accelerators for radiotherapy - A review, 9: 10816 (J;US)
NEPTUNIUM 237
Intestinal Absorption
Oral intake of radionuclides in the population. A review of biological factors of relevance for assessment of absorbed dose at long term waste storage, 9: 10847 (R;SE)
NERVE TISSUE
Biological Radiation Effects
Ventricular system ependyma in sheep following chronic irradiation, 9: 10883 (RA;CS;In Slovak)
NERVOUS SYSTEM DISEASES
Diagnosis
Diagnosis of multiple sclerosis, 9: 10798 (R;NL;In Dutch)
Epidemiology
Epidemiologic aspects of neural tube defects in the United States: changing concepts and their importance for screening and prenatal diagnostic programs, 9: 10828 (R;US)
NETHERLANDS
Energy Models
Reestimation of the EDM in the Netherlands and the reference case. Final report, 9: 9972 (R;US)
NETWORKS (COMPUTER)
See COMPUTER NETWORKS
NEUTRAL BEAM SOURCES
Design
Considerations involved in the design of negative-ion-based neutral beam systems, 9: 11324 (R;US)
Energy Losses
Studies of neutral beam power loss in stray magnetic fields, 9: 11349 (J;US)
Ion Sources
Characteristics of a long-pulse (30-s), high-power (4-MW) ion source for neutral beam injection, 9: 11271 (R;US)
Overcurrent
Overcurrent protection device for neutral beam sources, 9: 11268 (R;US)
NEUTRINO DETECTION
Spark Chambers
Calibration of the IHEP neutrino detector spark calorimeter in the electron beam at the energy of 1-8 GeV, 9: 10583 (R;SU;In Russian)
NEUTRINO OSCILLATION
Lepton spectroscopy, 9: 11082 (R;US)
NEUTRINO REACTIONS
Resonance Absorption
Possibility of observing recoilless resonant neutrino absorption, 9: 11145 (J;US)
NEUTRINOS
Mass
Lepton spectroscopy, 9: 11082 (R;US)
NEUTRON ACTIVATION ANALYSIS
See ACTIVATION ANALYSIS
NEUTRON REACTIONS
NEUTRON BEAMS
Production
Efficient neutron production using 12 MeV electrons, 9: 11020 (J;US)
NEUTRON CAPTURE
See NEUTRON REACTIONS
NEUTRON CAPTURE THERAPY
Evaluation
Dosimetric implications of new compounds for neutron capture therapy (NCT), 9: 10807 (BA;NL)
NEUTRON DETECTION
Proportional Counters
Passive neutron counter for determination of transuranics in high gamma activity samples, 9: 10612 (R;US)
NEUTRON DIFFRACTION
Small Angle Scattering
Neutron and synchrotorn x-ray small angle scattering instruments for applications in biology at the Brookhaven National Laboratory, 9: 10627 (R;US)
NEUTRON DOSIMETRY
Neutron dose equivalent rates due to heavy ion beams, 9: 11155 (R;FR)
Dielectric Track Detectors
Theoretical and experimental studies of the efficiency of a solid-state track detector utilizing (neutron, alpha) reactions, 9: 10595 (R;HU;In Hungarian)
Surface Barrier Detectors
Single surface barrier detectors for neutron dosimetry and associated light-ion fluxes, 9: 10622 (J;US)
Thermoluminescent Dosemeters
Neutron sensitivity studies of LiF and $CaSO_4$ thermoluminescent detectors, 9: 10594 (R;HU;In Hungarian)

NEUTRON MATTER
See NUCLEAR MATTER
NEUTRON RADIOGRAPHY
Fast neutron imaging by cellulose nitrate foils, 9: 10794 (R;DE)
Cold Neutrons
Nondestructive testing by neutron radiography, improvement of performance with cold neutrons, 9: 10434 (R;FR;In French)
Dielectric Track Detectors
Operation of a neutron radiography facility using nitrocellulose films as solid track detectors, 9: 9842 (R;FR;In French)
Neutron Sources
Resonance neutron radiography using an electron Linac, 9: 10535 (J;US)
Neutron Spectrometers
Neutron radiography analyzer - attempt at combining imaging and instrumental analyses, 9: 10581 (RA;CS;In Czech)
Uses
Fast neutron radiography in biology and medicine, 9: 10795 (R;DE)
NEUTRON REACTIONS
See also FAST FISSION
Capture
Proton and neutron radiative capture, 9: 10618 (J;US)
Charge-Exchange Reactions
Analog giant resonance excitation via the (n,p) reactions, 9: 11127 (J;US)
Cross Sections
Evaluation of neutron nuclear data for ^{13}C, 9: 11118 (R;JP)
Fast Fission
Reevaluation of ENDL of σ(n,f) and anti nu/sub p/ for ^{235}U and ^{239}Pu from 100 keV to 20 MeV, 9: 11139 (R;US)
NaI Detectors
Proton and neutron radiative capture, 9: 10618 (J;US)
Research Programs
Progress report 1982, 9: 9867 (R;SE)
Scattering
Neutron scattering from spherical and shape transitional nuclei, 9: 11146 (J;US)
NEUTRON SOURCES
Excludes reactors even when used as neutron sources.
Radiation Protection
Radiation safety at a neutron generator, 9: 10556 (J;US)
NEUTRON SPECTRA
Comparative Evaluations
Final report on the REAL-80 exercise, 9: 10576 (R;NL)
NEUTRON SPECTROMETERS
Display Devices
Neutron radiography analyzer - attempt at combining imaging and instrumental analyses, 9: 10581 (RA;CS;In Czech)
NEUTRON SPECTROSCOPY
Deuteron Beams
Neutron polarization measurements using the pulsed-polarized proton and deuteron beams at TUNL, 9: 11017 (J;US)
Polarized Beams
Neutron polarization measurements using the pulsed-polarized proton and deuteron beams at TUNL, 9: 11017 (J;US)
Proton Beams
Neutron polarization measurements using the pulsed-polarized proton and deuteron beams at TUNL, 9: 11017 (J;US)
Time-of-Flight Method
Neutron polarization measurements using the pulsed-polarized proton and deuteron beams at TUNL, 9: 11017 (J;US)
NEUTRON TRANSPORT THEORY
Inverse Scattering Problem
Solution of multidimensional inverse transport problems, 9: 11149 (J;US)
Monte Carlo Method
Neutron streaming through diagnostic penetrations in a fusion reactor shield, 9: 11291 (R;US)
NEUTRONS
See also FISSION NEUTRONS
Flux Density
Analytic expression for some dosimetric characteristics of neutrons and protons, 9: 11156 (R;SU;In Russian)
Semileptonic Decay
β-decay asymmetry of the free neutron, 9: 11052 (R;US)
Time reversal invariance in polarized neutron beta decay, 9: 11086 (R;US)
NEUTROPHILS
Cell Differentiation
Status of pulmonary host defense in the neonatal sheep: cellular and humoral aspects, 9: 10829 (R;US)
NEVADA
Geology
Discovery and geology of the Desert Peak geothermal field: a case history. Bulletin 97, 9: 9731 (R;US)
Geothermal Exploration
Discovery and geology of the Desert Peak geothermal field: a case history. Bulletin 97, 9: 9731 (R;US)
Geothermal Resources
Discovery and geology of the Desert Peak geothermal field: a case history. Bulletin 97, 9: 9731 (R;US)
NEW MEXICO
Air Pollution
Regional air quality in the Four Corners Study Region: modeling approach, 9: 10674 (BA;US)
Geology
Subsurface investigations for the area surrounding Tortugas Mountain, Dona Ana County, New Mexico, 9: 9730 (R;US)
NEW YORK
Geothermal Exploration
Exploration and drilling for geothermal heat in the Capital District, New York. Final report, 9: 9732 (R;US)
Hydrothermal Systems
Exploration and drilling for geothermal heat in the Capital District, New York. Final report, 9: 9732 (R;US)
Radioactive Waste Storage
Engineering evaluation of alternatives for the disposition of Niagara Falls Storage Site, its residues and wastes, 9: 9470 (R;US)
NEW YORK BIGHT
Hydrodynamics
Some two-layer models of the shelf-slope front: Geostropic adjustment and its maintenence, 9: 10971 (J;US)
NEWBORNS
See NEONATES
NICKEL
Activation Analysis
Trace element analysis of biological materials: Complementarity of PIXE and NAA, 9: 10342 (J;US)
Biological Effects
Effects of metal compounds on chromosome length, 9: 10924 (R;SE)
Catalytic Effects
Methanation of CO rich gases at high pressures, 9: 9252 (BA;US)
Potential of novel methanation catalysts, 9: 9250 (BA;US)
Chemical Reaction Kinetics
Methanation of CO rich gases at high pressures, 9: 9252 (BA;US)
Consumption Rates
Battery-related wastes in the UK (United Kingdom) and their disposal, 9: 10146 (R;US)
Decontamination
Decontamination of transuranic contaminated metals by melt refining, 9: 9500 (J;US)
Ecological Concentration
Concentration of heavy metals in water plants of some Austrian running waters, 9: 10932 (R;AT;In German.)
Emission Spectroscopy
Inductively coupled plasma-atomic emission spectrometry (ICP-AES) in support of nuclear waste management, 9: 10311 (R;US)
Ion Collisions
Hydrogen ion scattering from surfaces, 9: 11009 (RA;AU)
Materials Recovery
Battery-related wastes in the UK (United Kingdom) and their disposal, 9: 10146 (R;US)
Nuclear Reaction Analysis
Determination of technologically important elements in nickel ores using radiative neutron capture, 9: 10321 (RA;CS;In Czech)

PIXE Analysis
PIXE and the mysteries of Legionnaires' disease, 9: 10824 (J;US)
Trace element analysis of biological materials: Complementarity of PIXE and NAA, 9: 10342 (J;US)
X-ray fluorescence analysis of metallic glasses, 9: 10332 (RA;CS;In Slovak)
Precipitation
Raffinate treatment at the Portsmouth Gaseous Diffusion Plant, 9: 9461 (RA;US)
X-Ray Fluorescence Analysis
X-ray fluorescence analysis of metallic glasses, 9: 10332 (RA;CS;In Slovak)

NICKEL 58 TARGET
Alpha Reactions
Folding model analysis of alpha-particle elastic scattering with a semirealistic density dependent effective interaction, 9: 11124 (R;US)
Research on giant resonances at high excitation energy by alpha particle inelastic scattering, 9: 11122 (R;FR;In French)
Study of giant resonances at high excitation energy by alpha inelastic scattering, 9: 11123 (R;FR;In French)
Neon 20 Reactions
Beta decay of ^{78}Rb to low-lying levels in ^{78}Kr, 9: 11126 (J;US)
Neutron Reactions
Analog giant resonance excitation via the (n,p) reactions, 9: 11127 (J;US)
Silicon 28 Reactions
Observation of rigid nuclear rotation, 9: 11125 (J;US)
Silicon 29 Reactions
Observation of rigid nuclear rotation, 9: 11125 (J;US)

NICKEL 60 TARGET
Neutron Reactions
Analog giant resonance excitation via the (n,p) reactions, 9: 11127 (J;US)

NICKEL 62 TARGET
Neutron Reactions
Analog giant resonance excitation via the (n,p) reactions, 9: 11127 (J;US)

NICKEL 64 REACTIONS
Fission
Fission of polonium, osmium, and erbium composite systems, 9: 11136 (J;US)
Fusion Reactions
Suppression of neutron emission after heavy-ion fusion: Is shape relaxation affected by a superdeformed minimum?, 9: 11132 (J;US)

NICKEL 64 TARGET
Neutron Reactions
Analog giant resonance excitation via the (n,p) reactions, 9: 11127 (J;US)
Oxygen 16 Reactions
Several applications of the DWBA diffractional model of quasi-elastic reactions induced by heavy ions, 9: 11128 (R;FR)

NICKEL ALLOYS
See also ALLOY-RA-333
HAYNES ALLOYS
HAYNES STELLITE 6B
INCOLOY ALLOYS
INVAR
NICKEL BASE ALLOYS
STELLITE 6
Corrosion
Microstructural study of failure mechanisms during mechanical testing in coal gasification environments. Final report Mar 1980-Mar 1982, 9: 9237 (R;US)
Crystal Field
Experimental study of praseodymium intermetallic compounds at low temperatures, 9: 10233 (R;NL)
Ductility
Radiation-induced changes of the ductility of amorphous $Fe_{40}Ni_{40}B_{20}$, 9: 10226 (R;DE)
Electronic Structure
Experimental study of praseodymium intermetallic compounds at low temperatures, 9: 10233 (R;NL)
Materials Testing
Microstructural study of failure mechanisms during mechanical testing in coal gasification environments. Final report Mar 1980-Mar 1982, 9: 9237 (R;US)
Mechanical Properties
Microstructural study of failure mechanisms during mechanical testing in coal gasification environments. Final report Mar 1980-Mar 1982, 9: 9237 (R;US)
Permeability
Evaluation of CO_2 and CO dopants in hydrogen to reduce hydrogen permeation in the Stirling engine heater heat tube alloy CG-27 (36Ni-13Cr-5.5Mo-2.6Ti-1.7Al-bal Fe), 9: 10183 (R;US)
Physical Radiation Effects
Radiation-induced changes of the ductility of amorphous $Fe_{40}Ni_{40}B_{20}$, 9: 10226 (R;DE)
Specific Heat
Experimental study of praseodymium intermetallic compounds at low temperatures, 9: 10233 (R;NL)

NICKEL BASE ALLOYS
See also HAYNES 188 ALLOY
INCONEL ALLOYS
MONEL
MONEL 400
Chemical Composition
Performance of test materials in Westinghouse PDU fluid bed gasifier (6B, 188, N155, Alloy X, 26-1, 18SR, 825, 671, 800, 810 and 329; pack-aluminized type 310(Al) and 800(Al)), 9: 9247 (BA;US)
Chemical Reaction Kinetics
Phase equilibria and kinetics in the solid state reaction between silicon and NiCrAl, 9: 10251 (J;US)
Corrosion
Corrosion of metals in coal liquefaction processes. Final report, 9: 9223 (R;US)
Performance of test materials in Westinghouse PDU fluid bed gasifier (6B, 188, N155, Alloy X, 26-1, 18SR, 825, 671, 800, 810 and 329; pack-aluminized type 310(Al) and 800(Al)), 9: 9247 (BA;US)
Materials Testing
Effect of simulated HTGR primary circuit helium on properties of structural alloys, 9: 9799 (RA;US)
Phase Diagrams
Phase equilibria and kinetics in the solid state reaction between silicon and NiCrAl, 9: 10251 (J;US)
Surface Coating
Structure and behavior of vacuum plasma sprayed overlay coatings on nickel based superalloys. Master's thesis, 9: 10203 (R;US)

NICKEL COMPLEXES
Raman Spectra
Molecular complexes of copper uroporphyrin with aromatic acceptors, 9: 10369 (J;US)

NICKEL FLUORIDES
Photoelectron Spectroscopy
X-ray-photoelectron final-state screening in transition-metal compounds, 9: 10301 (J;US)

NICKEL ORES
Nuclear Reaction Analysis
Determination of technologically important elements in nickel ores using radiative neutron capture, 9: 10321 (RA;CS;In Czech)

NICKEL-CHROMIUM STEELS
Fatigue
Grain boundary precipitation treatment for improving high temperature low cycle fatigue strength of SSS113M for VHTR, 9: 9800 (RA;US)

NICKEL-IRON BATTERIES
See IRON-NICKEL BATTERIES

NIM
See NUCLEAR INSTRUMENT MODULES

NIOBIUM
Critical Field
Anisotropic critical fields in superconducting superlattices, 9: 10248 (J;US)
Inner-Shell Ionization
K-shell ionization by low-velocity ions, 9: 11024 (J;US)

Ion-Atom Collisions
K-shell ionization by low-velocity ions, 9: 11024 (J;US)
Superconductivity
Anisotropic critical fields in superconducting superlattices, 9: 10248 (J;US)
NIOBIUM ALLOYS
See also NIOBIUM BASE ALLOYS
Annealing
Intermetallic compound structure and phase transformations in zirconium based alloys during the annealing and under irradiation with the electron pulsed beam, 9: 10238 (RA;SU;In Russian)
Physical Radiation Effects
Intermetallic compound structure and phase transformations in zirconium based alloys during the annealing and under irradiation with the electron pulsed beam, 9: 10238 (RA;SU;In Russian)
NIOBIUM BASE ALLOYS
Physical Radiation Effects
High temperature radiation-induced embrittlement of some alloys on refractory metal base, 9: 10243 (R;SU;In Russian)
Point Defects
Cascade collision simulation and point defect configuration in the intermetallic compounds (Nb_3Sn, V_3Si, Nb_3SGe), 9: 10237 (RA;SU;In Russian)
NIOBIUM SULFIDES
Point Defects
Cascade collision simulation and point defect configuration in the intermetallic compounds (Nb_3Sn, V_3Si, Nb_3SGe), 9: 10237 (RA;SU;In Russian)
NITRATES
See also AMMONIUM NITRATES
Corrosive Effects
Corrosion in H.E.-boilers and analysis of flue gas condensate, 9: 10466 (BA;US)
Soil Chemistry
Movement of water and nitrate-nitrogen in a typical silt loam soil of western Kansas. Report for 1 Jul 1980-Sep 1982, 9: 10707 (R;US)
Translocation
Movement of water and nitrate-nitrogen in a typical silt loam soil of western Kansas. Report for 1 Jul 1980-Sep 1982, 9: 10707 (R;US)
NITRIC OXIDE
NO.
Photoelectron Spectroscopy
Resonant multiphoton ionization of NO via the A $^2\Sigma^+$ state: Photoelectron spectra and angular distributions, 9: 11013 (J;US)
Photoionization
Resonant multiphoton ionization of NO via the A $^2\Sigma^+$ state: Photoelectron spectra and angular distributions, 9: 11013 (J;US)
Remote Sensing
UV lidar techniques for atmospheric NO monitoring, 9: 10658 (R;SE)
NITRITES
Specific compounds should be indexed by coordination of a descriptor of the form (CATION) COMPOUNDS and the above anion descriptor.
Corrosive Effects
Corrosion in H.E.-boilers and analysis of flue gas condensate, 9: 10466 (BA;US)
NITRO COMPOUNDS
See also POLYCYCLIC NITRO COMPOUNDS
Biological Effects
Acute and genetic toxicity of 1-nitropyrene and its fate after single oral doses to rats, 9: 10941 (J;US)
Mutagenesis
Acute and genetic toxicity of 1-nitropyrene and its fate after single oral doses to rats, 9: 10941 (J;US)
NITROGEN
Absorption Spectra
Differential optical absorption techniques for diagnostics of coal gasification. Technical progress report, October, November, December 1982, 9: 9260 (R;US)
Activation Analysis
Determination of nitrogen, phosphorus, potassium, and chlorine levels in fertilizers by NAA using 14 MeV neutrons, 9: 10326 (RA;CS;In Slovak)
Determination of nitrogen and phosphorus levels in biological materials by NAA method using 14 MeV neutrons, 9: 10327 (RA;CS;In Slovak)
Laboratory and field acceptance performance of CONAC, 9: 9264 (R;US)
Adsorption
Determination of the surface reactivity of coal powders. Fifth quarterly report, September 1, 1983-November 30, 1983, 9: 9262 (R;US)
Enrichment
Surface enrichment of nitrogen during passivation of a highly resistant stainless steel, 9: 10254 (J;US)
Flammability
Lean flammability limit of some gaseous mixtures involving methane, 9: 9414 (BA;US)
Geochemistry
The oxidation state diagram--a potential tool for studying redox chemistry in seawater, 9: 10731 (J;NL)
Removal
Novel catalytic methods for heteroatom removal in coal liquids upgrading. Quarterly report No. 1, September 1-December 1, 1983, 9: 9233 (R;US)
Uptake
Greenhouse and laboratory experiments, 9: 9607 (RA;US)
Viscosity
Diffusion of gases in porous solids: simulations and measurements. Fifth quarterly technical proogress report, July 16, 1983-October 15, 1983, 9: 10427 (R;US)
Water Chemistry
The oxidation state diagram--a potential tool for studying redox chemistry in seawater, 9: 10731 (J;NL)
NITROGEN 13
Scintiscanning
Use of a model for the determination of actual lung volume in hypoxemic patients, 9: 10793 (R;FR;In French)
NITROGEN 14
Nuclear Magnetic Resonance
Some nitrogen-14 NMR studies in solids, 9: 10350 (R;US)
NITROGEN COMPOUNDS

NITROGEN DIOXIDE
Air Pollution Control
Fuel staging for pulverized coal furnace NO/sub x/ control, 9: 9308 (BA;US)
Atmospheric Chemistry
Chemistry and visual impact of the plumes from the Four Corners Power Plant and San Manuel Copper smelter. Interim report 4 Apr 79-14 Jan 82, 9: 10669 (R;US)
Combustion Kinetics
Evaluation of NO/sub x/ emissions on a pilot-scale furnace, 9: 9413 (R;US)

Ecological Concentration
Air pollution from oxides of nitrogen, carbon monoxide and hydrocarbons, 9: 10663 (R;US)
Emission
Basic pollutant emissions and their statistics of two coal fired boilers, 9: 9765 (R;SE)
Monitoring
Zero/span control of monitors used in the Danish national airquality measurement program, 9: 10659 (R;DK;In Danish)
Odor
Odour control by thermal incineration, 9: 10665 (R;US)
Optical Properties
Chemistry and visual impact of the plumes from the Four Corners Power Plant and San Manuel Copper smelter. Interim report 4 Apr 79-14 Jan 82, 9: 10669 (R;US)
Pollution Sources
Air pollution from oxides of nitrogen, carbon monoxide and hydrocarbons, 9: 10663 (R;US)
Extra high emissions of nitrogen oxides in Gothenburg 1975-1981, 9: 10655 (R;SE;In Swedish)

FUEL CYCLE CENTERS
FUEL REPROCESSING PLANTS
NUCLEAR POWER PLANTS
RADIOACTIVE WASTE FACILITIES
Decontamination
Final report on the decontamination of the Curium Source Fabrication Facility, 9: 9487 (R;US)
Mathematical Models
Interactive computer model for the assessment of continuous release atmospheric transfers, 9: 10679 (R;FR;In French)
Radiation Monitoring
PNL's environmental protection support project for the Office of Operational Safety, 9: 10842 (RA;US)
Radioactive Effluents
Interactive computer model for the assessment of continuous release atmospheric transfers, 9: 10679 (R;FR;In French)
Safeguards
Safeguards and security. Progress report, August 1982-January 1983, 9: 9521 (R;US)

NUCLEAR FUEL ELEMENTS
See FUEL ELEMENTS

NUCLEAR INDUSTRY
Air Cleaning
Nuclear air cleaning: the need for a change in emphasis, 9: 10681 (RA;US)
Air Pollution Control
Nuclear air cleaning: the need for a change in emphasis, 9: 10681 (RA;US)

NUCLEAR INSTRUMENT MODULES
Design
Isotope tracer measurement system incorporating the HP85 computer, 9: 10568 (R;GB)

NUCLEAR MATERIALS DIVERSION
Radiation Detection
Application of a 14 MeV neutron source to the detection of special nuclear material diversion, 9: 9532 (J;US)

NUCLEAR MATERIALS MANAGEMENT
Licensing
Materials licensing study, Phase 1. Volume 2. Findings and recommendations, 9: 9523 (R;US)
SIMALIR: simulation of materials licensing review, 9: 9522 (R;US)
Program Management
Office of Inspector General FY 1983 semiannual report, April 1, 1983-September 30, 1983, 9: 9967 (R;US)
NUCLEAR MATTER
Density
Folding model analysis of alpha-particle elastic scattering with a semirealistic density dependent effective interaction, 9: 11124 (R;US)
NUCLEAR MEDICINE
See also RADIOLOGY
Computerized Tomography
The state-of-the-art in medical computed tomography, 9: 10813 (J;US)
Cyclotrons
Alchemy with short-lived radionuclides, 9: 10823 (J;US)
Commercial production of radioisotopes for nuclear medicine, 1970-1980, 9: 10808 (J;US)
Image Scanners
Use and maintenance of nuclear medicine instruments in Southeast Asia. Results of a survey conducted by the Medical Applications Section of the IAEA, 9: 10796 (R;XA)
Isochronous Cyclotrons
Production of medical radionuclides with a 24 MeV proton cyclotron, 9: 10809 (J;US)
Linear Accelerators
Linear electron accelerators for medicine and radiation processing developed in Beijing, China, 9: 10540 (J;US)
Radioisotopes
Commercial production of radioisotopes for nuclear medicine, 1970-1980, 9: 10808 (J;US)
Radiopharmaceuticals
Alchemy with short-lived radionuclides, 9: 10823 (J;US)
Scintillation Counters
Use and maintenance of nuclear medicine instruments in Southeast Asia. Results of a survey conducted by the Medical Applications Section of the IAEA, 9: 10796 (R;XA)
NUCLEAR PHYSICS
Use only for indexing articles of very broad coverage, such as annual reviews, text books, etc.
Data Base Management
Data base and related services in basic and applied nuclear physics, 9: 11115 (J;US)
Information Centers
Data base and related services in basic and applied nuclear physics, 9: 11115 (J;US)
Research Programs
Annual report 1982. Annex, 9: 10001 (R;FR)
Progress report 1982, 9: 9867 (R;SE)
Technology Transfer
Data base and related services in basic and applied nuclear physics, 9: 11115 (J;US)
NUCLEAR POWER
Planning
Professional development for nuclear power programs in developing countries, 9: 10004 (R;US)
Public Opinion
Nuclear risk assessment and public acceptance. Final report for the period 1 December 1979-30 November 1982, 9: 9968 (R;XA)
Radiation Hazards
Nuclear energy and radiation risks, 9: 9893 (RA;DE;In German)
Risk Assessment
Nuclear risk assessment and public acceptance. Final report for the period 1 December 1979-30 November 1982, 9: 9968 (R;XA)
NUCLEAR POWER PLANTS
Comparative Evaluations
Comparison of evolving photovoltaic and nuclear power systems for Earth orbital applications, 9: 9660 (J;US)
Construction
Professional development for nuclear power programs in developing countries, 9: 10004 (R;US)
Quality assurance in civil works for nuclear power plants - status report on behalf of the Federal Minister of the Interior. Final report 1982, 9: 9891 (R;DE;In German)
Situation of quality assurance for safety related buildings of nuclear power stations. Status report on behalf of the Federal Minister of the Interior. Final report 1982, 9: 9892 (R;DE;In German)
Data Compilation
UPDATE: nuclear power program information and data, July-September 1983, 9: 10005 (R;US)
Documentation
Title list of documents made publicly available, October 1-31, 1983. Vol. 5, No. 10, 9: 9824 (R;US)
Fission Product Release
Radiation doses from the release into the water of the Barsebaeck power plant, 9: 9860 (R;SE;In Swedish)
Fuel Cycle
Fuel cycles in nuclear power plants, 9: 9420 (RA;DE;In German)
Legal Aspects
Nuclear Regulatory Commission issuances. Volume 18, No. 1, 9: 9825 (R;US)
Monitoring
Radiation doses from the release into the water of the Barsebaeck power plant, 9: 9860 (R;SE;In Swedish)
Performance
Nuclear power plant operating experience. Volume 1. Annual report, 1981, 9: 10014 (R;US)
Pipes
Dynamic simulation of Z-Bend and comparison with experimental data, 9: 9918 (J;US)
Experimental damping data for dynamic analyses of nuclear power plant piping systems, 9: 9917 (J;US)
Experimental study on the vibrational characteristics of piping snubbers, 9: 9837 (RA;US)
Professional Personnel
Professional development for nuclear power programs in developing countries, 9: 10004 (R;US)
Public Opinion
Perceived risk of nuclear and hydro electrical power generation in Colombia. Final report for the period 1 July 1980-31 January 1983, 9: 9969 (R;XA)
Radiation Accidents
Dose projection considerations for emergency conditions at nuclear power plants, 9: 9881 (RA;US)
Radiation Hazards
Safety of nuclear power plants, 9: 9894 (RA;DE;In German)
Radiation Monitoring
Aerial radiological survey of the Brunswick Steam Electric Plant and surrounding area, Southport, North Carolina. Date of survey: March 1980, 9: 10685 (R;US)
Aerial radiological survey of the Three Mile Island Nuclear Station and surrounding area, Middletown, Pennsylvania, 9: 10684 (R;US)
Radioactive Effluents
Release of activity and ocupational exposures of the nuclear power industry. Third quarter 1982, 9: 9861 (R;SE;In Swedish)
Radionuclide Migration
Modeling mesoscale diffusion and transport processes for releases within coastal zones during land/sea breezes, 9: 9859 (R;US)
Reactor Licensing
Regulatory licensing: status summary report, November 1-30 1983. Volume 12, No. 11, 9: 10013 (R;US)
Regulatory licensing: status summary report, October 1-31, 1983. Volume 12, No. 10, 9: 10012 (R;US)
Reactor Operation
Licensed operating reactors: status summary report, data as of September 30, 1983. Volume 7, No. 10, 9: 9771 (R;US)
Report to Congress on abnormal occurrences, April-June 1983. Vol. 6, No. 2, 9: 9895 (R;US)

Reactor Physics
Creation of energy through nuclear fission, 9: 9832 (RA;DE;In German)
Reactor Safety
Report to Congress on abnormal occurrences, April-June 1983. Vol. 6, No. 2, 9: 9895 (R;US)
Safety of nuclear power plants, 9: 9894 (RA;DE;In German)
Regulations
Nuclear Regulatory Commission issuances. Volume 18, No. 2, 9: 9826 (R;US)
Risk Assessment
Nuclear energy and radiation risks, 9: 9893 (RA;DE;In German)
Perceived risk of nuclear and hydro electrical power generation in Colombia. Final report for the period 1 July 1980-31 January 1983, 9: 9969 (R;XA)
Safety of nuclear power plants, 9: 9894 (RA;DE;In German)
Safety
Guide on a national system for collecting, assessing and disseminating information on safety-related events in nuclear power plants. A pre-publication working document, 9: 9888 (R;XA)
Safety Engineering
USI A-40 value/impact assessment, 9: 9910 (R;US)
Seismic Effects
Experimental study on the vibrational characteristics of piping snubbers, 9: 9837 (RA;US)
Probability problems in seismic risk analysis and load combinations for nuclear power plants, 9: 9916 (R;US)
Soil-Structure Interactions
Study of parameters important to soil-structure interaction in seismic analyses of nuclear power plants, 9: 9915 (R;US)

NUCLEAR POWER STATIONS
See NUCLEAR POWER PLANTS

NUCLEAR REACTION ANALYSIS
Performance
French AEC nuclear microprobe: description and first application examples, 9: 10310 (R;FR)

NUCLEAR REACTORS
See REACTORS

NUCLEAR SAFETY
See RADIATION PROTECTION

NUCLEAR WASTES
See RADIOACTIVE WASTES

NUCLEAR WEAPON TESTS
See NUCLEAR EXPLOSIONS

NUCLEAR WEAPONS
Simulation
Little Boy replication: justification and construction, 9: 10638 (R;US)

NUCLEASE (RIBONUCLEASE)
See RNA-ASE

NUCLEI
See also DEFORMED NUCLEI
INTERMEDIATE MASS NUCLEI
ISOMERIC NUCLEI
LIGHT NUCLEI
Nuclear Structure
Neutron scattering from spherical and shape transitional nuclei, 9: 11146 (J;US)

NUCLEONS
See also NEUTRONS
PROTONS
Structure Functions
Measurement of the nucleon structure function in iron using 215- and 93-GeV muons, 9: 11063 (J;US)

NUCLEOTIDYLTRANSFERASES
Code number 2.7.7.
Enzyme Activity
Quantitative and molecular analyses of mutation in a pSV2gpt transformed CHO cell line, 9: 10843 (R;US)
Genes
Comparative mutagenesis of human cells in vitro and in vivo. Progress report and financial statement, 9: 10768 (R;US)
Quantitative and molecular analyses of mutation in a pSV2gpt transformed CHO cell line, 9: 10843 (R;US)
Mutation Frequency
Comparative mutagenesis of human cells in vitro and in vivo. Progress report and financial statement, 9: 10768 (R;US)
Recombinant DNA
Quantitative and molecular analyses of mutation in a pSV2gpt transformed CHO cell line, 9: 10843 (R;US)

O

OAK RIDGE NATIONAL LABORATORY
See ORNL

OCCUPATIONAL SAFETY
Risk Assessment
Risk assessment as a means of evaluating environmental controls, 9: 10950 (RA;US)

OCEAN THERMAL ENERGY CONVERSION
Gas Compressors
Hydraulic air compression for ocean thermal energy conversion applications, 9: 9692 (BA;US)
Hydraulic Equipment
Hydraulic air compression for ocean thermal energy conversion applications, 9: 9692 (BA;US)
Mist-Lift Cycles
Vapor/droplet coupling and the mist flow (OTEC) cycle, 9: 9691 (J;US)
Two-Phase Flow
Vapor/droplet coupling and the mist flow (OTEC) cycle, 9: 9691 (J;US)

OCEANS
See SEAS

OCONEE-1 REACTOR
Thermal Shock
Quality assurance of PTS thermal hydraulic calculations at BNL (Pressurized Thermal Shock), 9: 9873 (R;US)

ODOR
Air Pollution Control
Odour control by thermal incineration, 9: 10665 (R;US)
Detection
Factors which can reduce the olfactory response to natural gas odorants, 9: 9364 (BA;US)

ODORANTS
Detection
Factors which can reduce the olfactory response to natural gas odorants (Tertiary butyl mercaptan, isopropyl mercaptan, dimethyl sulfides, tetrahydrothiophene, methyl ethyl sulfide), 9: 9364 (BA;US)

ODORIZATION
Risk Assessment
Risk-benefit analysis of improved gas odorants, 9: 9368 (BA;US)

OFFICE BUILDINGS
Cogeneration
Optimal cogeneration systems for high-rise office buildings, 9: 10086 (J;US)
Energy Conservation
Model industry initiated energy conservation program. Final report, 9: 10174 (R;US)
Passive Solar Cooling Systems
Economic analysis of four passive cooling strategies for commercial office buildings, 9: 9716 (BA;US)
Solar Air Conditioning
Georgia Power Corporate Headquarters solar system. Final construction status report, 9: 9697 (R;US)
Solar Space Heating
Georgia Power Corporate Headquarters solar system. Final construction status report, 9: 9697 (R;US)
Solar Water Heating
Georgia Power Corporate Headquarters solar system. Final construction status report, 9: 9697 (R;US)

OFF-PEAK ENERGY STORAGE
Sensible Heat Storage
Comparison of domestic olivine and European magnesite for electrically charged thermal energy storage, 9: 9952 (J;US)

OHIO
Energy Policy
Midwest Appropriate Technology Small Grants Program project summaries, 9: 9977 (R;US)
Oil Shale Deposits
Infill drilling for shale gas development: A field case study, 9: 9416 (J;US)
OIL BURNERS
Installation
Residential Conservation Service installer's guide, 9: 10082 (R;US)
Retrofitting
Coal conversion of the district heating power station in Vasteraas, Sweden, 9: 9764 (BA;US)
OIL RESIDUES

OIL SHALE DEPOSITS
Exploitation
Infill drilling for shale gas development: A field case study (Ohio), 9: 9416 (J;US)
Resource Development
Unconventional gas: recent R and D advances, 9: 9380 (BA;US)
OIL SHALE WASTE WATER
See OIL SHALES
WASTE WATER
OIL SHALES
See also BLACK SHALES
Biological Effects
Particulate oil shale inhalation and pulmonary inflammatory response in rats, 9: 10926 (R;US)
Inhalation
Particulate oil shale inhalation and pulmonary inflammatory response in rats, 9: 10926 (R;US)
Mineralogy
Mineral reactions during high temperature oil shale processing, 9: 9418 (J;US)
Particulates
Particulate oil shale inhalation and pulmonary inflammatory response in rats, 9: 10926 (R;US)
Pyrolysis
Flash pyrolysis of oil shale with various gases, 9: 9417 (R;US)
Retorting
Mineral reactions during high temperature oil shale processing, 9: 9418 (J;US)
OIL SPILL FINGERPRINTING
See OIL SPILLS
OIL SPILLS
Cleaning
Assessment of the mackay apparatus for testing oil-spill dispersants, 9: 9350 (R;US)
Clearance of oil from water surfaces: the oil mop recovery device, 9: 9348 (R;US)
Criteria for the selection of oil spill containment and recovery equipment for use at sea, 9: 9353 (R;US)
Evaluation trials on equipment manufactured by OMI Ltd., Tonbridge, Kent. the oil mop II-9DP, 9: 9352 (R;US)
Investigation of the demulsification of water-in-oil emulsions formed when crude oil or fuel oil is spilt on the sea, 9: 9345 (R;US)
Investigation of the effects of oil viscosity and water-in-oil emulsion formation on dispersant efficiency, 9: 9354 (R;US)
Observations on the aerial application of dispersant using dc-6b aircraft, Gulf of Campeche, Mexico, 9: 9351 (R;US)
Studies on the use of helicopters for oil spill clearance, 9: 9344 (R;US)
Emulsification
Fate of controlled oil spills at sea, 9: 9349 (R;US)
Investigation of the effects of oil viscosity and water-in-oil emulsion formation on dispersant efficiency, 9: 9354 (R;US)
Environmental Effects
Report to SOTEAG (Shetland Oil Terminal Environmental Advisory Group) on salt marsh monitoring around Sullom Voe in 1981, 9: 9347 (R;US)
Evaporation
Fate of controlled oil spills at sea, 9: 9349 (R;US)
Simulation
Environmental risks of oil and coal transport at sea. A comparative study., 9: 9284 (R;SE;In Swedish)
Surfactants
Dispersants for oil spills clean-up operations at sea, on coastal waters and beaches, 9: 9343 (R;US)
OIL WELLS
Production
Unsteady-state pressure response due to production with a slotted liner completion, 9: 9329 (J;US)
Pumps
Hydraulic pumping unit. Final technical progress report, 9: 9325 (R;US)
Well Drilling
Needs in drilling technology research and development, 9: 9328 (R;US)
Well Servicing
Unsteady-state pressure response due to production with a slotted liner completion, 9: 9329 (J;US)
OLIVINE
Heat Storage
An evaluation of ASHRAE standard 94.2 for testing electrically charged thermal energy storage central units, 9: 9954 (J;US)
Sensible Heat Storage
Comparison of domestic olivine and European magnesite for electrically charged thermal energy storage, 9: 9952 (J;US)
OLIVINES
See OLIVINE
ON-LINE COMPUTERS
See COMPUTERS
ON-LINE MEASUREMENT SYSTEMS
Bench-Scale Experiments
Laboratory and field acceptance performance of CONAC, 9: 9264 (R;US)
Field Tests
Laboratory and field acceptance performance of CONAC, 9: 9264 (R;US)
ONTARIO

Radiometric Surveys
Blind River uranium deposits: the ores and their setting, 9: 9436 (RA;US)
Uranium Deposits
Blind River uranium deposits: the ores and their setting, 9: 9436 (RA;US)
Genesis of Canadian uraniferous quartz-pebble conglomerate ores, 9: 9439 (RA;US)
OOCYTES
Ultrastructural Changes
A temporal study at the ultrastructural level of the developing pro-oocyte of Drosophila melanogaster, 9: 10834 (J;DE)
OPERATION (REACTOR)
See REACTOR OPERATION
OPTICAL FIBERS
Physical Radiation Effects
Radiation response of optical fibers and photodiode components with a view to nuclear data links, 9: 10290 (R;FR;In French)
Radiation Hardening
Gamma irradiation up to 10^9 rads of all silica fibers, comparison with polymer clad silica fibers and solid sample between 0.4 and 2.5 micrometers, 9: 10291 (R;FR;In French)
OPTICAL MODELS
Dirac Equation
Clark et al. and McNeil et al. respond, 9: 11144 (J;US)
ORBITAL SOLAR POWER PLANTS
Comparative Evaluations
Comparison of evolving photovoltaic and nuclear power systems for Earth orbital applications, 9: 9660 (J;US)
Photovoltaic Power Plants
Comparison of evolving photovoltaic and nuclear power systems for Earth orbital applications, 9: 9660 (J;US)

OREGON
Offshore Operations
Draft environmental impact statement: proposed polymetallic sulfide minerals lease offering, Gorda Ridge area offshore Oregon and northern California, 9: 10757 (R;US)
ORES
See also GOLD ORES
IRON ORES
NICKEL ORES
URANIUM ORES
YTTRIUM ORES
ZIRCONIUM ORES
Activation Analysis
An in-situ neutron activation analysis system for assaying metal ores, 9: 10624 (J;US)
ORGANIC BORON COMPOUNDS
Uses
Dosimetric implications of new compounds for neutron capture therapy (NCT), 9: 10807 (BA;NL)
ORGANIC COMPOUNDS
See also ALDEHYDES
AMINES
AROMATICS
HETEROCYCLIC COMPOUNDS
HYDROCARBONS
KETONES
ORGANIC BORON COMPOUNDS
ORGANIC PHOSPHORUS COMPOUNDS
ORGANIC SULFUR COMPOUNDS
ORGANOMETALLIC COMPOUNDS
PROTEINS
Ecological Concentration
Guidelines for monitoring indoor air quality. Research report, 9: 10670 (R;US)
Pyrolysis
Coal liquefaction model studies: free radical chain decomposition of diphenylpropane, dibenzyl ether, and phenyl ether via β-scission reactions, 9: 9259 (J;US)
ORGANIC INSULATORS
Electrical Properties
Comparison of cryogenic neutron and gamma irradiation effects in organic insulators at low dose, 9: 10282 (RA;US)
Mechanical Properties
Comparison of cryogenic neutron and gamma irradiation effects in organic insulators at low dose, 9: 10282 (RA;US)
Strength of G-10CR and G-11CR epoxies after irradiation at 5 K by gamma rays, 9: 10284 (RA;US)
Physical Radiation Effects
Comparison of cryogenic neutron and gamma irradiation effects in organic insulators at low dose, 9: 10282 (RA;US)
Debonding of epoxy from glass in irradiated laminates, 9: 10283 (RA;US)
Strength of G-10CR and G-11CR epoxies after irradiation at 5 K by gamma rays, 9: 10284 (RA;US)
ORGANIC PHOSPHORUS COMPOUNDS
Excluding NUCLEIC ACIDS and NUCLEOTIDES.
Solvent Properties
Inductively coupled plasma-atomic emission spectrometry (ICP-AES) in support of nuclear waste management (HHDECMP (hexyl hexyl-N,N diethylcarbamolymethylphosphonate) and n-octyl(phenyl)-N,N diisobutylcarbamoylmethylphosphine oxide), 9: 10311 (R;US)
ORGANIC SOLVENTS
Fractionation
Heavy recycle solvent studies in two-stage coal liquefaction. Fifth technical progress report, June 11-September 10, 1983, 9: 9232 (R;US)
Recycling
Heavy recycle solvent studies in two-stage coal liquefaction. Fifth technical progress report, June 11-September 10, 1983, 9: 9232 (R;US)
ORGANIC SULFUR COMPOUNDS
See also CYSTAMINE
POLYCYCLIC SULFUR HETEROCYCLES
SULFONATES
THIOLS
THIOPHENE
Detection
Factors which can reduce the olfactory response to natural gas odorants (Tertiary butyl mercaptan, isopropyl mercaptan, dimethyl sulfides, tetrahydrothiophene, methyl ethyl sulfide), 9: 9364 (BA;US)
ORGANOMETALLIC COMPOUNDS
For compounds of metals and semimetals with organic compounds, but only when the metal or semimetal is directly bound to carbon.
Chemical Preparation
Macrobicyclic (hexaamine)platinum(IV) complexes: synthesis, characterization, and electrochemistry, 9: 10362 (J;US)
Crystallography
Macrobicyclic (hexaamine)platinum(IV) complexes: synthesis, characterization, and electrochemistry, 9: 10362 (J;US)
Electrochemistry
Macrobicyclic (hexaamine)platinum(IV) complexes: synthesis, characterization, and electrochemistry, 9: 10362 (J;US)
ORGANS

PAPER
Gasification
Solar gasification of carbonaceous materials, 9: 9541 (J;GB)
PARABOLIC TROUGH COLLECTORS
Control Systems
Georgia Power Corporate Headquarters solar system. Final construction status report, 9: 9697 (R;US)
PARAFFINS
See ALKANES
PARAGENES
See PLASMIDS
PARATHION
Biodegradation
Fate and persistence of ^{14}C pesticide residues in different soils: effects of ^{14}C pesticide contaminated run-off soil water on biological systems. Part of a coordinated programme on isotopic-tracer-aided studies of agrochemical residue - soil biota interactions. Final report for the period 1 August 1977 - 31 August 1982, 9: 10837 (R;XA)
PARKS (ENERGY)
See ENERGY PARKS

PARTICLE BEAMS
Acceleration
Physics of particle acceleration, 9: 10483 (R;GB)
PARTICLE KINEMATICS
Poincare Groups
Unified geometrical approach to relativistic particle dynamics, 9: 11114 (J;US)
PARTICLE SIZE
Measuring Instruments
Instruments and techniques for dynamic particle size measurement of coal dust. Open file report 1 Dec 76-30 Nov 80, 9: 9295 (R;US)
Measuring Methods
Instruments and techniques for dynamic particle size measurement of coal dust. Open file report 1 Dec 76-30 Nov 80, 9: 9295 (R;US)
PARTICLES (FUEL)
See FUEL PARTICLES
PARTICULATES
Prior to September 1981, this concept was indexed to PARTICLES and AEROSOLS.
Deposition
Measurements of suspended particles and particle deposition. Methods and evaluation of methods, 9: 10656 (R;SE;In Swedish)
Ecological Concentration
Guidelines for monitoring indoor air quality. Research report, 9: 10670 (R;US)
Measuring Methods
Measurements of suspended particles and particle deposition. Methods and evaluation of methods, 9: 10656 (R;SE;In Swedish)
Measurement of particulate emission using a British Coal Utilization Research Association cyclone probe fitted with a Whatman gf/a microfibre backing filter, 9: 9294 (R;US)
Multi-Element Analysis
Non-destructive multielement analysis of airborne particulates by means of instrumental neutron activation method. Final report for the period 1 December 1975 - 28 February 1981, 9: 10314 (R;XA)
Stack Disposal
Comparison of observed and predicted normalized air concentrations for particles released from a height of 111 meters, 9: 10673 (BA;US)
Standards
Benefits analysis of alternative secondary national ambient air quality standards for sulfur dioxide and total suspended particulates. Volume 1. Final report, 9: 10697 (R;US)
Benefits analysis of alternative secondary national ambient air quality standards for sulfur dioxide and total suspended particulates. Volume 2. Final report, 9: 10698 (R;US)
Benefits analysis of alternative secondary national ambient air quality standards for sulfur dioxide and total suspended particulates. Volume 4. Final report, 9: 10699 (R;US)
Benefits analysis of alternative secondary national ambient air quality standards for sulfur dioxide and total suspended particulates. Volume 5. Final report, 9: 10700 (R;US)
Benefits analysis of alternative secondary national ambient air quality standards for sulfur dioxide and total suspended particulates. Volume 6. Final report, 9: 10701 (R;US)
PARTURITION
Age Dependence
Epidemiologic aspects of neural tube defects in the United States: changing concepts and their importance for screening and prenatal diagnostic programs, 9: 10828 (R;US)
PASSIVE SOLAR COOLING SYSTEMS
Economic Analysis
Economic analysis of four passive cooling strategies for commercial office buildings, 9: 9716 (BA;US)
Standards
Standards for passive solar heating and cooling systems, 9: 9714 (BA;US)
PASSIVE SOLAR HEATING SYSTEMS
See also DIRECT GAIN SYSTEMS
TROMBE WALLS
Computerized Simulation
Analysis of the value of selected surface and latent heat storage for passive solar space heating, 9: 9719 (BA;US)
Design
North-side solar greenhouse. Final report, 9: 9702 (R;US)
Economic Analysis
Passive solar investment: evaluating consumer cashflow preferences in light of uncertain future fuel costs, 9: 9718 (BA;US)
Latent Heat Storage
Analysis of the value of selected surface and latent heat storage for passive solar space heating, 9: 9719 (BA;US)
Performance
Analysis of the value of selected surface and latent heat storage for passive solar space heating, 9: 9719 (BA;US)
Evaluating the performance of passive solar heated buildings, 9: 9713 (BA;US)
North-side solar greenhouse. Final report, 9: 9702 (R;US)
Passive solar commercial buildings project. Project status report, November 1-December 31, 1983, 9: 9698 (R;US)
Reviews
Solar energy almanac, 9: 9717 (B;US)
Solar Collectors
Analysis of the value of selected surface and latent heat storage for passive solar space heating, 9: 9719 (BA;US)
Standards
Standards for passive solar heating and cooling systems, 9: 9714 (BA;US)
PBF REACTOR
PFB-CANDU Fuel Element LOCA Test experiment operating specification. Revision 1, 9: 9886 (R;US)
Fluid-Structure Interactions
Effects of fuel rod length on in-core relocation of liquefied material, 9: 9869 (J;US)
Fuel Rods
Effects of fuel rod length on in-core relocation of liquefied material, 9: 9869 (J;US)
Reactor Cores
Effects of fuel rod length on in-core relocation of liquefied material, 9: 9869 (J;US)
PCB
See CHLORINATED AROMATIC HYDROCARBONS
PDX DEVICES
Plasma Confinement
Attainment of high confinement in neutral beam heated divertor discharges in the PDX tokamak, 9: 11233 (R;US)
Plasma Diagnostics
Particle and heat flux measurements in PDX edge plasmas, 9: 11235 (R;US)
Plasma Sheath
Particle and heat flux measurements in PDX edge plasmas, 9: 11235 (R;US)
PEA PLANT
See PISUM
PEARL SPAR
See ANKERITE
DOLOMITE
PEAT
Calorific Value
Louisiana peat resources. Final technical report, 1 April 1981-15 April 1983, 9: 9289 (R;US)
Chemical Composition
Louisiana peat resources. Final technical report, 1 April 1981-15 April 1983, 9: 9289 (R;US)
In-Situ Gasification
Bacteriological in situ gasification of peat to methane (Vyrmethane method), 9: 9240 (BA;US)
Resource Assessment
Louisiana peat resources. Final technical report, 1 April 1981-15 April 1983, 9: 9289 (R;US)
PELLETRON ACCELERATORS
Ion Sources
Production of negative ion beams by charge exchange at the 3UDH Pelletron accelerator in Lund; ion-optical calculations for different geometries, 9: 10516 (R;SE;In Swedish)
PELLETRONS
See PELLETRON ACCELERATORS
PELLETS (BREEDING)
See BREEDING PELLETS

PENNSYLVANIA
Electric Utilities
Electric utility conservation programs and the decision to abandon partially completed supply projects, 9: 10172 (J;GB)
PEOPLE
See HUMAN POPULATIONS
PEOPLES REPUBLIC OF CHINA
See CHINA
PEPPERS
Fruit of Capsicum plant.
Genetic Radiation Effects
Gametophyte irradiations in some dicotyledonous crop species. Prospects and results, 9: 10852 (RA;XA)
Radiation Chimeras
Gametophyte irradiations in some dicotyledonous crop species. Prospects and results, 9: 10852 (RA;XA)
PEPTIDE HYDROLASES
Code number 3.4.
Enzyme Activity
Characterization of two uterine proteases and their actions on the estrogen receptor, 9: 10781 (J;US)
PEPTIDES
Molecular Structure
Purification and sequencing of cyanogen bromide fragments from ribulosebisphosphate carboxylase/oxygenase from Rhodospirillum rubrum, 9: 10775 (J;US)
Purification
Purification and sequencing of cyanogen bromide fragments from ribulosebisphosphate carboxylase/oxygenase from Rhodospirillum rubrum, 9: 10775 (J;US)
PERIOSTEUM
See BONE TISSUES
PERSONNEL
Studies of groups of persons employed in a particular field of endeavor. For studies on individuals in a group see also MAN.
See also MEDICAL PERSONNEL
MINERS
REACTOR OPERATORS
Decontamination
Lessons learnt from the experience acquired on the operation of pressurized water reactors in the field of radiation protection, 9: 9875 (R;FR;In French)
Information Systems
Army Civilian Personnel System (ACPERS): functional description. Automated Data Systems Manual, 9: 11358 (R;US)
Monitoring
EDS coal liquefaction process development. Phase V. ECLP industrial hygiene program - II, 9: 9221 (R;US)
Radiation Doses
Release of activity and ocupational exposures of the nuclear power industry. Third quarter 1982, 9: 9861 (R;SE;In Swedish)
Radiation Hazards
An update of epidemiologic studies of plutonium workers, 9: 10899 (J;GB)
Radiation Protection
Lessons learnt from the experience acquired on the operation of pressurized water reactors in the field of radiation protection, 9: 9875 (R;FR;In French)
PERSONNEL MONITORING
Statistical Data
Dosestatistikk for yrkeseksponerte i 1981, 9: 10715 (R;NO;In Norwegian)
PETROCHEMICAL FEEDSTOCKS
See CHEMICAL FEEDSTOCKS
PETROLEUM
Limited to crude oil; see also COAL LIQUIDS, SHALE OIL, etc.
Collection, reduction, operation, maintenance and documentation of energy data for the petroleum industry. Final report, 9: 9337 (R;US)
Chemical Analysis
Liquid fossil fuel technology. Quarterly technical progress rport, April-June 1983, 9: 9324 (R;US)
Chemical Composition
Determination of miscibility pressure direct observation method. Final report, 9: 9326 (R;US)
Comparative Evaluations
Acute, chronic and reproductive effects of petroleum and two petroleum substitutes on the large milkweed bug, Oncopeltus fasciatus, 9: 10933 (R;US)
Emulsions
Investigation of the demulsification of water-in-oil emulsions formed when crude oil or fuel oil is spilt on the sea, 9: 9345 (R;US)
Energy Shortages
Energy conservation after decontrol: economic consequences of alternative policy choices, 9: 9342 (BA;US)
Energy Supplies
Alternative mechanisms for drawing down the Strategic Petroleum Reserve: forward-based markets compared with auction-only mechanisms, 9: 9338 (R;US)
Global Aspects
Uncertainties about future world oil prices, 9: 9341 (J;US)
Information Systems
System development/operation and data collection/reconciliation for forms EIA-23 and EIA-64A. Final report: 1979 report year processing, May 15, 1980-May 15, 1981, 9: 9335 (R;US)
Lethal Doses
Acute, chronic and reproductive effects of petroleum and two petroleum substitutes on the large milkweed bug, Oncopeltus fasciatus, 9: 10933 (R;US)
Market
Stockpile coordination project. Harvard Energy Security Program. Final report (Response of other oil importers to USA SPR policy), 9: 10025 (R;US)
Phase Studies
Determination of miscibility pressure direct observation method. Final report, 9: 9326 (R;US)
Prices
Uncertainties about future world oil prices, 9: 9341 (J;US)
Processing
Liquid fossil fuel technology. Quarterly technical progress rport, April-June 1983, 9: 9324 (R;US)
Production
Gulf of Mexico summary report, 9: 9327 (R;US)
System development/operation and data collection/reconcilation for forms EIA-23 and EIA-64A. Final closeout report, July 15, 1978-September 30, 1981, 9: 9334 (R;US)
Public Opinion
Nuclear risk assessment and public acceptance. Final report for the period 1 December 1979-30 November 1982, 9: 9968 (R;XA)
Reserves
Gulf of Mexico summary report, 9: 9327 (R;US)
System development/operation and data collection/reconcilation for forms EIA-23 and EIA-64A. Final closeout report, July 15, 1978-September 30, 1981, 9: 9334 (R;US)
Risk Assessment
Nuclear risk assessment and public acceptance. Final report for the period 1 December 1979-30 November 1982, 9: 9968 (R;XA)
Survival Time
Acute, chronic and reproductive effects of petroleum and two petroleum substitutes on the large milkweed bug, Oncopeltus fasciatus, 9: 10933 (R;US)
Toxicity
Acute, chronic and reproductive effects of petroleum and two petroleum substitutes on the large milkweed bug, Oncopeltus fasciatus, 9: 10933 (R;US)
Viscosity
Determination of miscibility pressure direct observation method. Final report, 9: 9326 (R;US)
PETROLEUM COKE
See COKE
PETROLEUM PRODUCTS
PETROLEUM DEPOSITS
Exploration
Offshore in-situ testing techniques, 1983, 9: 9322 (R;US)

Leasing
Modeling the number of bids received for outer continental shelf leases by Poisson-type models, 9: 9340 (J;US)
Offshore Sites
Offshore in-situ testing techniques, 1983, 9: 9322 (R;US)
PETROLEUM INDUSTRY
Data Compilation
MWV annual report 1982, 9: 9339 (R;DE;In German)
Profits
Production profits, 9: 10032 (R;DE;In German)
PETROLEUM PRODUCTS
See also DIESEL FUELS
FUEL OILS
GASOLINE
Market
State of Connecticut middle distillate monitoring program. Report for July 1982-June 1983, 9: 9336 (R;US)
PETROLEUM REFINERIES
Occupational Safety
Control technology assessment of selected petroleum refinery operations, 9: 9333 (R;US)
Operating Cost
Collection, reduction, operation, maintenance and documentation of energy data for the petroleum industry. Final report, 9: 9337 (R;US)
Waste Water
Characterization and treatment of aqueous wastes and residue from petroleum refineries. Final report 1 Oct 79-30 Sep 82, 9: 9346 (R;US)
PETROLEUM RESIDUES
B.P. over 1100°F, 593°C; includes oil residues, residua.
Combustion
Method of burning residual fuel oil in distillate fuel oil burners. Summary report, 9: 10135 (R;US)
Uses
Chemical aspects of the utilization of heavy oil residua, 9: 9332 (J;US)
Viscosity
Chemical aspects of the utilization of heavy oil residua, 9: 9332 (J;US)
PETT

PHOSPHORIC ACID
Fuel Cells
Evaluation of gas cooling for pressurized phosphoric acid fuel cell stacks, 9: 10050 (J;US)
PHOSPHORS
Chemical Reaction Kinetics
Investigation of lyoluminescence techniques for application in radiation-protection dosimetry. Final report Jan 1980-Jan 1982, 9: 10351 (R;US)
Photosensitivity
Investigation of lyoluminescence techniques for application in radiation-protection dosimetry. Final report Jan 1980-Jan 1982, 9: 10351 (R;US)
PHOSPHORUS
Activation Analysis
Determination of nitrogen, phosphorus, potassium, and chlorine levels in fertilizers by NAA using 14 MeV neutrons, 9: 10326 (RA;CS;In Slovak)
Determination of nitrogen and phosphorus levels in biological materials by NAA method using 14 MeV neutrons, 9: 10327 (RA;CS;In Slovak)
Diffusion
Enhanced diffusion of phosphorus at grain boundaries, 9: 9645 (J;US)
PIXE Analysis
Large scale study of tooth enamel, 9: 10343 (J;US)
PHOSPHORUS FLUORIDES
Magnetic Properties
Magnetic response of spin-density waves in a quasilinear half-filled Hubbard band, 9: 10304 (J;US)
Spin Waves
Magnetic response of spin-density waves in a quasilinear half-filled Hubbard band, 9: 10304 (J;US)
PHOSPHORUS IONS
Ion-Atom Collisions
Comparison of L x-ray spectra from multi-stripped ions in P^+ + Ar and S^+ + Ar gas collisions at 100 keV, 9: 11026 (J;US)
X-Ray Spectra
Comparison of L x-ray spectra from multi-stripped ions in P^+ + Ar and S^+ + Ar gas collisions at 100 keV, 9: 11026 (J;US)
PHOSPHORYLASES
See PHOSPHOTRANSFERASES
PHOSPHOTRANSFERASES
Code number 2.7.1
Genes
Comparative mutagenesis of human cells in vitro and in vivo. Progress report and financial statement, 9: 10768 (R;US)
PHOTOCATHODES
Stability

PIONS NEUTRAL
Electroproduction
Pion photo- and electroproduction on light nuclei, 9: 11117 (R;FR)
Particle Structure
Quark approach to Santilli's conjecture on hadronic structure - II, 9: 11073 (R;XA)
Photoproduction
Pion photo- and electroproduction on light nuclei, 9: 11117 (R;FR)
Radiobiology
Radiobiology of pions at LAMPF, 9: 10907 (J;US)
PIONS MINUS
Pion Dosimetry
Negative pion capture in biological material, 9: 11157 (B;GB)
PIONS NEUTRAL
Photoproduction
Geometric reconstruction of events in the experiment on the investigation of the recoil proton polarization in the π0-meson photoproduction, 9: 11054 (R;SU;In Russian)
High transverse momentum π^0 and direct photon photoproduction, 9: 11056 (R;FR;In French)
PIPELINES
Corrosion
A.G.A. Pipeline Research Committee research into control of defects, corrosion, and defect repair, 9: 9403 (BA;US)
Damage
A.G.A. Pipeline Research Committee research into control of defects, corrosion, and defect repair, 9: 9403 (BA;US)
Influence of mechanical damage on transmission pipeline integrity, 9: 9388 (BA;US)
Defects
A.G.A. Pipeline Research Committee research into control of defects, corrosion, and defect repair, 9: 9403 (BA;US)
Design
A new pipeline design for high-temperature fluids, 9: 10409 (J;US)
Failures
Delamination of a fusion bonded epoxy coating from cathodically protected mild steel, 9: 9399 (BA;US)
Heat Losses
A new pipeline design for high-temperature fluids, 9: 10409 (J;US)
Leaks
Study of the behavior of gas distribution equipment in hydrogen service. Phase II. Project 65022 final report, April 26, 1979-June 26, 1980, 9: 9384 (R;US)
Materials
1983 international gas research conference, 9: 9385 (B;US;In English and French)
Analytical prediction of crack growth in polyethylene pipes, 9: 9393 (BA;US)
Finite element analysis of stress concentration effects in plastic pipelines, 9: 9394 (BA;US)
Fundamental processes of cathodically protecting steel pipelines, 9: 9400 (BA;US)
Propagating fracture in plastics pipelines, 9: 9396 (BA;US)
Mechanical Properties
Influence of mechanical damage on transmission pipeline integrity, 9: 9388 (BA;US)
Repair
A.G.A. Pipeline Research Committee research into control of defects, corrosion, and defect repair, 9: 9403 (BA;US)
Surface Coating
Delamination of a fusion bonded epoxy coating from cathodically protected mild steel, 9: 9399 (BA;US)
Present situation and future developments of corrosion protection coatings used by the gas industry in France - characteristics and evaluation of performances, 9: 9401 (BA;US;FR)
PIPES
Deformation
Experimental determination of the propagation pressure of circular pipes, 9: 10417 (J;US)
Elasticity
Dynamic simulation of Z-Bend and comparison with experimental data, 9: 9918 (J;US)
Materials
Analytical prediction of crack growth in polyethylene pipes, 9: 9393 (BA;US)
Influence of morphology and molecular weight on ductile-brittle transitions in polyethylene, 9: 9395 (BA;US)
Rapid crack propagation in polyethylene pipes, 9: 9397 (BA;US)
Slow crack growth in plastic pipes - characterization and applications, 9: 9398 (BA;US)
Mechanical Tests
Experimental determination of the propagation pressure of circular pipes, 9: 10417 (J;US)
Pressure Measurement
Experimental determination of the propagation pressure of circular pipes, 9: 10417 (J;US)
Seismic Effects
Dynamic simulation of Z-Bend and comparison with experimental data, 9: 9918 (J;US)
Experimental damping data for dynamic analyses of nuclear power plant piping systems, 9: 9917 (J;US)
Seismic damping factors of small bore piping as influenced by insulation and support elements, 9: 9820 (J;US)
Shock Absorbers
Experimental study on the vibrational characteristics of piping snubbers, 9: 9837 (RA;US)

Stress Analysis
Dynamic simulation of Z-Bend and comparison with experimental data, 9: 9918 (J;US)
Experimental damping data for dynamic analyses of nuclear power plant piping systems, 9: 9917 (J;US)
Supports
Experimental study on the vibrational characteristics of piping snubbers, 9: 9837 (RA;US)
Seismic damping factors of small bore piping as influenced by insulation and support elements, 9: 9820 (J;US)

PISUM
Chimeras
Chimera formation in M_1 pea plants raised from mutagen-treated seeds, 9: 10851 (RA;XA)
Genetic Radiation Effects
Chimera formation in M_1 pea plants raised from mutagen-treated seeds, 9: 10851 (RA;XA)
Gametophyte irradiations in some dicotyledonous crop species. Prospects and results, 9: 10852 (RA;XA)
Radiation Chimeras
Gametophyte irradiations in some dicotyledonous crop species. Prospects and results, 9: 10852 (RA;XA)

PITCHBLENDE
Chemical Composition
Uranium mineralization of the Witwatersrand and Dominion Reef systems, 9: 9433 (RA;US)
Petrogenesis
Uraniferous constituents of the Witwatersrand conglomerates: ore-microscopic observations and implications for the Witwatersrand metallogeny, 9: 9430 (RA;US)

PITTSBURG-MIDWAY SOLVENT REFINED COAL PRO
See SRC PROCESS

PITUITARY GLAND
Biological Radiation Effects
Catecholamine level and monoamino oxidase activity following irradiation, 9: 10879 (RA;CS;In Slovak)

PIXE ANALYSIS
Prior to October 1980, this concept was indexed to X-RAY EMISSION ANALYSIS.
Data Acquisition
An ion-beam analysis facility, 9: 10542 (J;US)
Diagnostic Uses
PIXE and the mysteries of Legionnaires' disease, 9: 10824 (J;US)
Van de Graaff Accelerators
An ion-beam analysis facility, 9: 10542 (J;US)

PLANETARY MAGNETOSPHERES
Computerized Simulation
Computer simulation of reconnection in planetary magnetospheres, 9: 10985 (R;US)
Magnetic Field Configurations
Computer simulation of reconnection in planetary magnetospheres, 9: 10985 (R;US)

PLANT CELLS
Cell Membranes
Mechanical properties of the plasma membrane of isolated plant protoplasts, 9: 10838 (J;US)

PLANT FOSSILS
See FOSSILS

PLANTS

Activation Analysis
Application of INAA in monitoring environmental pollution by car exhaust gas, 9: 10319 (RA;CS;In Czech)
Determination of nitrogen and phosphorus levels in biological materials by NAA method using 14 MeV neutrons, 9: 10327 (RA;CS;In Slovak)
Fully computerized system for processing gamma spectra in neutron activation analysis (NAA) of plants and fodders, 9: 10341 (J;US)
Chimeras
Mutagen-induced chimerism in dicotyledonous plants, 9: 10921 (RA;XA)
Gamma Spectra
Fully computerized system for processing gamma spectra in neutron activation analysis (NAA) of plants and fodders, 9: 10341 (J;US)
Genetic Effects
Mutagen-induced chimerism in dicotyledonous plants, 9: 10921 (RA;XA)
Genetic Radiation Effects
Chimerism in irradiated dicotyledonous plants, 9: 10850 (RA;XA)
Mutagenesis
Handling of the first and second generations following mutagenic treatment of seeds in dicotyledonous plants, 9: 10922 (RA;XA)
Mutagen-induced chimerism in dicotyledonous plants, 9: 10921 (RA;XA)
Radiation Chimeras
Chimerism in irradiated dicotyledonous plants, 9: 10850 (RA;XA)
Radionuclide Kinetics
Utilization of radioactive contaminated arable land and pasture in dependence of time, 9: 10711 (RA;AT;In German)
Radionuclide Migration
Radionuclide transport processes in terrestrial ecosystems, 9: 10720 (J;US)

PLANTS (POWER)
See POWER PLANTS

PLASMA
See also EQUILIBRIUM PLASMA
HIGH-BETA PLASMA
INHOMOGENEOUS PLASMA
LASER-PRODUCED PLASMA
Critical Velocity
Critical ionization velocity - a bibliography, 9: 11239 (R;SE)
Review of impact experiments on the critical ionization velocity, 9: 11240 (R;SE)
Electromagnetic Radiation
Generation of electromagnetic waves in a beam plasma system, 9: 11225 (RA;AU)
Electron Density
Measurement of large scale density fluctuations from phase scintillations of a probing electromagnetic wave, 9: 11197 (RA;AU)
Emission Spectra
Stark spectroscopy of hydrogen lines in turbulent plasma. 1. Low-frequency turbulence, 9: 11250 (TG;US)
Energy Absorption
Heating of plasma ions in a tokamak by the second-harmonic ion-cyclotron resonance interaction with radio-frequency waves, 9: 11256 (J;US)
Equilibrium
Experimental studies of equilibrium in a linear EXTRAP z-pinch discharge, 9: 11243 (R;SE)
High-Frequency Heating
Heating of plasma ions in a tokamak by the second-harmonic ion-cyclotron resonance interaction with radio-frequency waves, 9: 11256 (J;US)
Hydromagnetic Waves
Studies of hydromagnetic waves and oscillations in current carrying cylindrical plasmas, 9: 11218 (RA;AU)
ICR Heating
rf stabilization of an axisymmetric tandem mirror, 9: 11252 (J;US)
Interferometry
Long path optical interferometry of plasmas using polarization and modified Jamin systems, 9: 11220 (RA;AU)
Ion Acoustic Waves
Extreme forward scattering from ion acoustic waves in a laboratory plasma, 9: 11196 (RA;AU)
Ionization
Study of the relevance of simple solutions to nonlinear rate equations with time-varying coefficients, 9: 11189 (R;FR)

Magnetic Flux
rf stabilization of an axisymmetric tandem mirror, 9: 11252 (J;US)
Magnetization
Critical ionization velocity mechanism for the case of gas mixture, 9: 11238 (R;SE)
RF Systems
Some aspects of the coupling of the r.f. power to a magnetoplasma, 9: 11194 (RA;AU)
Stabilization
rf stabilization of an axisymmetric tandem mirror, 9: 11252 (J;US)
Thomson Scattering
Thomson scattering measurements on Tortus, 9: 11209 (RA;AU)
Turbulence
Stark spectroscopy of hydrogen lines in turbulent plasma. 1. Low-frequency turbulence, 9: 11250 (TG;US)
Wave Propagation
Nonlinear laser wavepacket propagation in plasmas and soliton formation, 9: 11228 (RA;AU)

PLASMA CONFINEMENT
See also INERTIAL CONFINEMENT
Plasma confinement. A study of plasma equilibria in axisymmetric devices, 9: 11259 (B;GB)

PLASMA DIAGNOSTICS
Calorimeters
Particle and heat flux measurements in PDX edge plasmas, 9: 11235 (R;US)
Dye Lasers
Plasma magnetic field measurement by intracavity absorption. Progress report, June 1, 1983-May 31, 1984, 9: 11186 (R;US)
Electromagnetic Radiation
Measurement of large scale density fluctuations from phase scintillations of a probing electromagnetic wave, 9: 11197 (RA;AU)
Faraday Effect
Current sensing in magnetic fusion experiments by Faraday rotation in single-mode optical fibers, 9: 11229 (R;US)
Interferometers
In waveguide instruments for infrared and millimetre waves, 9: 11211 (RA;AU)
Thin-film detectors for submillimetre-wave diagnostics of plasmas, 9: 11224 (RA;AU)
Langmuir Probe
Particle and heat flux measurements in PDX edge plasmas, 9: 11235 (R;US)
Michelson Interferometer
Spatially scanning submillimeter laser interferometer for a small tokamak, 9: 11195 (RA;AU)
Thomson Scattering
Initial simultaneous Thomson-scattering measurements in the TMX-U tandem mirror, 9: 11247 (R;US)

PLASMA DIODES
See THERMIONIC DIODES

PLASMA DRIFT
Kinetic Equations
Solutions of the drift kinetic equation, 9: 11219 (RA;AU)

PLASMA HEATING
See also HIGH-FREQUENCY HEATING
LASER-RADIATION HEATING
Alfven Waves
Radial plasma flux caused by the interaction of m = +-1 Alfven waves, 9: 11204 (RA;AU)
Boundary Layers
Interaction of MHD waves with a plasma surrounded by a cold gas-mantle, 9: 11246 (R;SE)
RF Systems
R.F. heating of plasma using the spatial Alfven resonance, 9: 11216 (RA;AU)
RF heating of a toroidal plasma with two-ion species, 9: 11227 (RA;AU)

PLASMA INSTABILITY
See also PLASMA MACROINSTABILITIES
Mathematical Models
Numerical studies of resistive instabilities in toroidal plasmas, 9: 11212 (RA;AU)
Stabilization
MHD-equilibrium and stability of a z-pinch in an external magnetic field, 9: 11249 (R;SE)
V Codes
Visco-resistive instabilities, 9: 11206 (RA;AU)

PLASMA MACROINSTABILITIES
See also BALLOONING INSTABILITY
KINK INSTABILITY
TEARING INSTABILITY
MHD activity in the ISX-B tokamak: experimental results and theoretical interpretation, 9: 11187 (R;US)
Three-Dimensional Calculations
Review of time-dependent, three-dimensional resistive magnetohydrodynamic calculations, 9: 11215 (RA;AU)

PLASMA OSCILLATIONS
See PLASMA WAVES

PLASMA PRODUCTION
RF Systems
Nanosecond time-resolved studies of r.f. plasma development, 9: 11214 (RA;AU)

Environmental Transport
Idaho Field Experiment 1981. Volume 1. Experimental design and measurement systems, 9: 10661 (R;US)
Mathematical Models
Interactive computer model for the assessment of continuous release atmospheric transfers, 9: 10679 (R;FR;In French)
Radionuclide Migration
Interactive computer model for the assessment of continuous release atmospheric transfers, 9: 10679 (R;FR;In French)

PLUTONIUM
Maximum Permissible Concentration
Plutonium--its behavior in natural water systems and assimilation by man, 9: 10903 (J;GB)
Radionuclide Migration
Groundwater monitoring in the Savannah River Plant low-level waste burial ground: a summary and interpretation of the analytical data, 9: 9514 (R;US)
Water Chemistry
Plutonium--its behavior in natural water systems and assimilation by man, 9: 10903 (J;GB)

PLUTONIUM 238
Electrochemistry
Chemical behavior of long-lived radionuclides in the marine environment, 9: 10749 (R;US)
Radiobiology
Dosimetry of incorporated transuranic radionuclides, 9: 10890 (R;DD;In German)
Radioecological Concentration
Alpha-activities in environmental samples, 9: 10710 (RA;AT;In German)
Chemical behavior of long-lived radionuclides in the marine environment, 9: 10749 (R;US)
Tissue Distribution
Dose-response relationships for bone cancers from plutonium in dogs and people, 9: 10900 (J;GB)

PLUTONIUM 239
Biological Accumulation
^{239}Pu metabolism in newborn and weanling pigs, 9: 10891 (J;GB)
Electrochemistry
Chemical behavior of long-lived radionuclides in the marine environment, 9: 10749 (R;US)
Environmental Transport
Radionuclide transport processes in terrestrial ecosystems, 9: 10720 (J;US)
Intestinal Absorption
Oral intake of radionuclides in the population. A review of biological factors of relevance for assessment of absorbed dose at long term waste storage, 9: 10847 (R;SE)
Metabolism
^{239}Pu metabolism in newborn and weanling pigs, 9: 10891 (J;GB)
Radiobiology
Dosimetry of incorporated transuranic radionuclides, 9: 10890 (R;DD;In German)
Radioecological Concentration
Alpha-activities in environmental samples, 9: 10710 (RA;AT;In German)
Chemical behavior of long-lived radionuclides in the marine environment, 9: 10749 (R;US)
Measured ^{234,238}U and fallout ^{239,240}Pu in human bone ash from Nepal and Australia: skeletal alpha dose, 9: 10898 (J;GB)
Tissue Distribution
Dose-response relationships for bone cancers from plutonium in dogs and people, 9: 10900 (J;GB)
Skeletal retention and distribution of ^{226}Ra and ^{239}Pu in beagles injected at ages ranging from 2 days to 5 years, 9: 10906 (J;GB)

PLUTONIUM 239 TARGET
Neutron Reactions
Reevaluation of ENDL of σ(n,f) and anti nu/sub p/ for ^{235}U and ^{239}Pu from 100 keV to 20 MeV, 9: 11139 (R;US)

PLUTONIUM 240
Electrochemistry
Chemical behavior of long-lived radionuclides in the marine environment, 9: 10749 (R;US)
Radiobiology
Dosimetry of incorporated transuranic radionuclides, 9: 10890 (R;DD;In German)
Radioecological Concentration
Alpha-activities in environmental samples, 9: 10710 (RA;AT;In German)
Chemical behavior of long-lived radionuclides in the marine environment, 9: 10749 (R;US)
Measured ^{234,238}U and fallout ^{239,240}Pu in human bone ash from Nepal and Australia: skeletal alpha dose, 9: 10898 (J;GB)

PLUTONIUM 241
Radiobiology
Dosimetry of incorporated transuranic radionuclides, 9: 10890 (R;DD;In German)

PLUTONIUM 242
Radiobiology
Dosimetry of incorporated transuranic radionuclides, 9: 10890 (R;DD;In German)

PLUTONIUM DIOXIDE
Packaging
Design and testing of a plutonium oxide transfer container, 9: 10398 (R;FR;In English, French)
PNA

POLONIUM 210
Radioecological Concentration
Alpha-activities in environmental samples, 9: 10710 (RA;AT;In German)
POLONIUM 210 TARGET
Carbon 12 Reactions
Fission of polonium, osmium, and erbium composite systems, 9: 11136 (J;US)
Oxygen 18 Reactions
Fission of polonium, osmium, and erbium composite systems, 9: 11136 (J;US)
POLYACRYLATES
Radiolysis
Radiolysis of resist polymers. 1. Poly(methyl-alpha-haloacrylates) and copolymers with methylmethacrylate. Technical report (Gamma radiation), 9: 10382 (R;US)
POLYAMIDES
See also POLYURETHANES
Adsorption
Retention of polyacrylamide by berea sandstone, baker dolomite, and sodium kaolinite during polymer flooding. Paper SPE 8981, 9: 9323 (R;US)
POLYCARBONATES
Thermal Degradation
Experimental approach to evaluating environmental degradation mechanisms in bisphenol-A polycarbonate films on metallic substrates, 9: 9724 (R;US)
POLYCRYSTALS
Crystal Growth
Enhanced diffusion of phosphorus at grain boundaries, 9: 9645 (J;US)
Grain Boundaries
Enhanced diffusion of phosphorus at grain boundaries, 9: 9645 (J;US)
Photovoltaic Effect
Enhanced diffusion of phosphorus at grain boundaries, 9: 9645 (J;US)
POLYCYCLIC AROMATIC HYDROCARBONS
See also 3-METHYLCHOLANTHRENE
Biogeochemistry
Polycyclic aromatic hydrocarbon (PAH)-phase associations in Washington coastal sediment, 9: 10745 (J;GB)
Chemical Bonds
Probing the microenvironment of benzo[a]pyrene diol epoxide-DNA adducts by triple excited state quenching methods, 9: 10780 (J;NL)
Ecological Concentration
Polycyclic aromatic hydrocarbon (PAH)-phase associations in Washington coastal sediment, 9: 10745 (J;GB)
Metabolism
Mutagenicity tests of flue gas emissions from coal and oil fired plants. Investigation of the cells of Drosophila and mammals, 9: 9317 (R;SE;In Swedish)
POLYCYCLIC NITRO COMPOUNDS
Biological Effects
Inducible error-prone repair in B. subtilis. Progress report, May 1, 1983-April 30, 1984, 9: 10844 (R;US)
POLYCYCLIC SULFUR HETEROCYCLES
Gas Chromatography
Some aspects of the development of the Vaal Reef uranium-gold carbon seams, Witwatersrand sequence: organic geochemical and microbiological considerations, 9: 9431 (RA;US)
Mass Spectroscopy
Some aspects of the development of the Vaal Reef uranium-gold carbon seams, Witwatersrand sequence: organic geochemical and microbiological considerations, 9: 9431 (RA;US)
POLYETHYLENES
Comparative Evaluations
Present situation and future developments of corrosion protection coatings used by the gas industry in France - characteristics and evaluation of performances, 9: 9401 (BA;US;FR)

Crack Propagation
Analytical prediction of crack growth in polyethylene pipes, 9: 9393 (BA;US)
Propagating fracture in plastics pipelines, 9: 9396 (BA;US)
Rapid crack propagation in polyethylene pipes, 9: 9397 (BA;US)
Slow crack growth in plastic pipes - characterization and applications, 9: 9398 (BA;US)
Degassing
Vacuum outgassing of various materials, 9: 10445 (R;US)
Fracture Properties
Structural basis of mechanical properties of polyethylenes, 9: 10287 (BA;US)
Fractures
Propagating fracture in plastics pipelines, 9: 9396 (BA;US)
Rapid crack propagation in polyethylene pipes, 9: 9397 (BA;US)
Slow crack growth in plastic pipes - characterization and applications, 9: 9398 (BA;US)
Materials Testing
Study of the behavior of gas distribution equipment in hydrogen service. Phase II. Project 65022 final report, April 26, 1979-June 26, 1980, 9: 9384 (R;US)
Molecular Structure
Structural basis of mechanical properties of polyethylenes, 9: 10287 (BA;US)
Molecular Weight
Influence of morphology and molecular weight on ductile-brittle transitions in polyethylene, 9: 9395 (BA;US)
Permeability
Study of the behavior of gas distribution equipment in hydrogen service. Phase II. Project 65022 final report, April 26, 1979-June 26, 1980, 9: 9384 (R;US)
Stress Analysis
Finite element analysis of stress concentration effects in plastic pipelines, 9: 9394 (BA;US)
Tensile Properties
Influence of morphology and molecular weight on ductile-brittle transitions in polyethylene, 9: 9395 (BA;US)
Structural basis of mechanical properties of polyethylenes, 9: 10287 (BA;US)

POLY(ISOBUTYLENE OXIDE)
See EPOXIDES

POLYMER FLOODING
See WATERFLOODING

POLYMERS
Aging
Mechanical Engineering Research Program. Quarterly progress report, April-June 1983, 9: 10441 (R;US)
Chemical Reactions
Competing irreversible cooperative reactions on polymer chains, 9: 10359 (J;US)
Irreversible Processes
Competing irreversible cooperative reactions on polymer chains, 9: 10359 (J;US)
Weathering
Solar Thermal Technology Program: polymer synthesis and characterization subtask. Annual progress report, FY 1983, 9: 9723 (R;US)

POLYNUCLEAR AROMATIC HYDROCARBONS
See POLYCYCLIC AROMATIC HYDROCARBONS

POLYSACCHARIDES
See also CELLULOSE
MUCOPOLYSACCHARIDES
Radiosensitivity Effects
Radioprotective efficiency of glucan in gamma-irradiated mice, 9: 10869 (RA;CS;In Czech)

POLYTHENE

POLYURETHANES
Comparative Evaluations
Present situation and future developments of corrosion protection coatings used by the gas industry in France - characteristics and evaluation of performances, 9: 9401 (BA;US;FR)

POLYVINYL CHLORIDE
See PVC

POOR PEOPLE
See LOW INCOME GROUPS

POROUS MATERIALS
Diffusion
Diffusion of gases in porous solids: simulations and measurements. Fifth quarterly technical proogress report, July 16, 1983-October 15, 1983, 9: 10427 (R;US)
Heat Flow
Thermodynamic coupling of heat and matter flows in near-field regions of nuclear waste repositories, 9: 9482 (R;US)
Mass Transfer
Thermodynamic coupling of heat and matter flows in near-field regions of nuclear waste repositories, 9: 9482 (R;US)

PORPHYRINS
Dimerization
Photochemical reactions of complex molecules in condensed phase. Progress report, March 1, 1983-February 28, 1984, 9: 10377 (R;US)
Electron Transfer
Photochemical reactions of complex molecules in condensed phase. Progress report, March 1, 1983-February 28, 1984, 9: 10377 (R;US)
Molecular Structure
Local structure of manganese in the photosynthetic apparatus and superoxide dismutase: an x-ray absorption study, 9: 10772 (R;US)
Raman Spectra
Molecular complexes of copper uroporphyrin with aromatic acceptors, 9: 10369 (J;US)
X-Ray Spectroscopy
Local structure of manganese in the photosynthetic apparatus and superoxide dismutase: an x-ray absorption study, 9: 10772 (R;US)

PORTSMOUTH GASEOUS DIFFUSION PLANT
Radioactive Waste Management
Destruction of uranium-contaminated waste oil, 9: 9462 (RA;US)

PORTSMOUTH PLANT
See PORTSMOUTH GASEOUS DIFFUSION PLANT

POSITRON CHANNELING
Electromagnetic Radiation
Characteristics and applications of channeling radiation from relativistic electrons and positrons, 9: 11152 (J;US)

POSITRON COMPUTED TOMOGRAPHY
ECAT Scanning
Design of the Neuro-ECAT: A high-resolution, high efficiency positron tomography for imaging the adult head or infant torso, 9: 10815 (J;US)

POSITRON DETECTION
Cherenkov Counters
Large-aperture gas Cherenkov counter with wave shifter, 9: 10589 (R;SU;In Russian)

POSITRONIUM
Positronium formation and diffusion in a molecular solid studied with variable-energy positrons, 9: 11150 (J;US)
Decay
Upper limit for the axion decay of ortho-positronium, 9: 10992 (RA;DE;In German)

POST-IRRADIATION THERAPY
Diet
Attempt at treating irradiated rats with propolis, 9: 10864 (RA;CS;In Slovak)
Drugs
Attempt at utilizing antibacterial efficacy of olaquindox in treatment of post-irradiative syndrome, 9: 10870 (RA;CS;In Czech)

POSTULATED PARTICLES
See also DYONS
INTERMEDIATE BOSONS
MAGNETIC MONOPOLES
QUARKS
Bound State
Towards a dynamical preon model, 9: 11091 (R;XA)

Particle Structure
Approach towards minimality - supersymmetry at the preonic or pre-preonic level, 9: 11085 (R;XA)
Supersymmetry
Approach towards minimality - supersymmetry at the preonic or pre-preonic level, 9: 11085 (R;XA)
POTABLE WATER
See DRINKING WATER
POTASSIUM
Activation Analysis
Determination of nitrogen, phosphorus, potassium, and chlorine levels in fertilizers by NAA using 14 MeV neutrons, 9: 10326 (RA;CS;In Slovak)
POTASSIUM 38
Production
Production of medical radionuclides with a 24 MeV proton cyclotron, 9: 10809 (J;US)
POTASSIUM CHLORIDES
Electric Currents
Thermally stimulated thermoelectrical and thermomagnetic currents in dielectrics, 9: 10296 (RA;SU;In Russian)
F Centers
Study of an F center in molten KCl, 9: 10299 (J;US)
POTASSIUM COMPOUNDS
See also POTASSIUM CHLORIDES
Radiosensitivity Effects
Effect of K, Mg salts of aspartic acid on neuromuscular activity of mice following chronic irradiation, 9: 10865 (RA;CS;In Slovak)
POWDER METALLURGY
Quality Control
Development of high performance superconductors by powder metallurgy, 9: 10262 (J;US)
POWER BURST FACILITY USAEC
See PBF REACTOR
POWER CONDITIONING CIRCUITS
Cost Benefit Analysis
Residential photovoltaic power conditioning technology for grid connected applications, 9: 9681 (J;US)
Design
Characterization of the electrical output of flat-plate photovoltaic arrays, 9: 9638 (J;US)
Efficiency
Characterization of the electrical output of flat-plate photovoltaic arrays, 9: 9638 (J;US)
Research Programs
Residential photovoltaic power conditioning technology for grid connected applications, 9: 9681 (J;US)
POWER DEMAND
Forecasting
ORNL integrated forecasting system, 9: 10033 (R;US)
POWER FACTOR
Control
Utility interface issues for grid-connected photovoltaic systems, 9: 9674 (J;US)
POWER GENERATION
See also COGENERATION
Control
Method of effectiveness evaluation of system control in electric power systems, 9: 10041 (R;CH;In German)
Supply Disruption
Efficient simulation approach for evaluating the potential effects of nuclear power plant shutdowns on electrical utility generating systems, 9: 9971 (R;US)
POWER PLANT AND INDUSTRIAL FUEL USE ACT
Conversion to coal: Baltimore Gas and Electric Company, Brandon Shores Generating Station Units 1 and 2, Anne Arundel County, Maryland. Draft environmental impact statement, 9: 9762 (R;US)
POWER PLANTS

Southeast Alaska intertie dc transmission system: reconnaissance design and cost estimate. Appendix I, 9: 9766 (R;US)

POWER TRANSMISSION LINES
Electric Fields
TVA's 500-kV electric and magnetic fields measurements and analyses. Final report, 9: 9770 (R;US)
Failures
Windamper method of galloping control. Pt. II. Prediction of dynamic galloping. Final report (Ice buildup on windward side), 9: 9769 (R;US)
Windamper method of galloping control. Pt. I. Management overview. Final report (Ice on windward side of conductors), 9: 9768 (R;US)
Magnetic Fields
TVA's 500-kV electric and magnetic fields measurements and analyses. Final report, 9: 9770 (R;US)
POWERED SUPPORTS
Installation
Process for the analytical investigation of acyclic operational events in the bituminous coal mining presented by the example of a large-scale investigation of the development and withdrawal of shield faces, 9: 9291 (R;DE;In German)
Mine Cars
Possibilities to transport shield-type support with a trackless device during installing of props in the German bituminous coal mining, 9: 9292 (R;DE;In German)
Removal
Process for the analytical investigation of acyclic operational events in the bituminous coal mining presented by the example of a large-scale investigation of the development and withdrawal of shield faces, 9: 9291 (R;DE;In German)
Transport
Possibilities to transport shield-type support with a trackless device during installing of props in the German bituminous coal mining, 9: 9292 (R;DE;In German)
PRASEODYMIUM ALLOYS
Crystal Field
Experimental study of praseodymium intermetallic compounds at low temperatures, 9: 10233 (R;NL)
Electronic Structure
Experimental study of praseodymium intermetallic compounds at low temperatures, 9: 10233 (R;NL)
Magnetic Susceptibility
Experimental study of praseodymium intermetallic compounds at low temperatures, 9: 10233 (R;NL)
Phase Transformations
Experimental study of praseodymium intermetallic compounds at low temperatures, 9: 10233 (R;NL)
Specific Heat
Experimental study of praseodymium intermetallic compounds at low temperatures, 9: 10233 (R;NL)
PRECAMBRIAN ERA
Atmospheric Chemistry
Precambrian development of an oxygenic atmosphere, 9: 10955 (RA;US)
Climates
Genesis of Canadian uraniferous quartz-pebble conglomerate ores, 9: 9439 (RA;US)
Geochemistry and morphology of mineral components from the fossil gold and uranium placers of the Witwatersand, 9: 9429 (RA;US)
Earth Atmosphere
Detrital uraninite and pyrite: are they evidence for a reducing atmosphere, 9: 9434 (RA;US)
Genesis of Canadian uraniferous quartz-pebble conglomerate ores, 9: 9439 (RA;US)
Plate Tectonics
Thoughts about uranium-bearing quartz-pebble conglomerates: a summary of ideas presented at the workshop, 9: 9442 (RA;US)
Tectonics
Detrital uraninite and pyrite: are they evidence for a reducing atmosphere, 9: 9434 (RA;US)
PRECOMPOUND-NUCLEUS EMISSION
Neutron Emission
Code ALICE B and B: a precompound/evaporation fission code emphasizing neutron yields, 9: 11143 (R;US)
PREEQUILIBRIUM NUCLEAR PROCESSES

Reactor Materials
Fracture mechanics data deduced from thermal-shock and related experiments with PWR pressure vessel material, 9: 9787 (J;US)
Stress-corrosion cracking in light-water reactors, 9: 9778 (J;US)
Risk Assessment
Accident analysis in the framework of emergency provisions. A study on the current state and further development of the accident analysis methods in the framework of the emergency provisions for nuclear power plants with light water moderated pressurized water reactor, 9: 9890 (R;DE;In German)
Secondary Coolant Circuits
Stress-corrosion cracking in light-water reactors, 9: 9778 (J;US)
Steam Generators
Flow-induced vibration of steam generator tube bundles, 9: 9781 (R;FR;In French)
Mechanical stresses of PWR steam generators and particularly of the bundle of U tubes, 9: 9782 (R;FR;In French)
PYRENE
Biological Effects
Acute and genetic toxicity of 1-nitropyrene and its fate after single oral doses to rats, 9: 10941 (J;US)
Mutagenesis
Acute and genetic toxicity of 1-nitropyrene and its fate after single oral doses to rats, 9: 10941 (J;US)
PYRITE
Age Estimation
Geochemical studies on the origin of the detrital pyrites in the conglomerates of the Witwatersrand Goldfields, South Africa, 9: 10969 (RA;US)
Chemical Composition
Geochemical studies on the origin of the detrital pyrites in the conglomerates of the Witwatersrand Goldfields, South Africa, 9: 10969 (RA;US)
Chemical Reactions
Geochemistry and morphology of mineral components from the fossil gold and uranium placers of the Witwatersand, 9: 9429 (RA;US)
Crystal Structure
Some aspects of Witwatersrand mineralization, with special reference to uranium minerals, 9: 9432 (RA;US)
Geochemistry
Geochemical studies on the origin of the detrital pyrites in the conglomerates of the Witwatersrand Goldfields, South Africa, 9: 10969 (RA;US)

Grain Size
Geochemical studies on the origin of the detrital pyrites in the conglomerates of the Witwatersrand Goldfields, South Africa, 9: 10969 (RA;US)
Isotope Ratio
Genesis of Canadian uraniferous quartz-pebble conglomerate ores, 9: 9439 (RA;US)
Metamorphism
Geochemical studies on the origin of the detrital pyrites in the conglomerates of the Witwatersrand Goldfields, South Africa, 9: 10969 (RA;US)

PYRITES
See PYRITE

PYRROLES
Performance
Applications of electrogenerated conducting polymers in electrochemical photovoltaic cells, 9: 9651 (J;US)

Q

QUAD CITIES-2 REACTOR
Core Spray Systems
Analysis of cracked core spray piping from the Quad Cities Unit 2 boiling water reactor, 9: 9772 (R;US)

QUALITY ASSURANCE
Program Management
Quality assurance in environmental measurements, 9: 10651 (RA;US)

QUANTITATIVE CHEMICAL ANALYSIS
Interlaboratory Comparisons
Report on intercomparison V-9 of the determination of trace elements in cotton cellulose, 9: 10769 (R;XA)
Report on intercomparison A-13 of the determination of trace elements in freeze dried animal blood, 9: 10770 (R;XA)

QUANTUM CHROMODYNAMICS
Color Model
Towards a dynamical preon model, 9: 11091 (R;XA)
CP Invariance
Enhanced T-nonconserving nuclear moments, 9: 11088 (J;US)
Gauge Invariance
Towards an effective bilocal theory from QCD in a background, 9: 11097 (R;XA)
Gluons
Functional approaches to two-dimensional QCD, 9: 11108 (RA;SU)
Lagrangian Function
Enhanced T-nonconserving nuclear moments, 9: 11088 (J;US)
Mass Formulae
Mass inequalities for quantum chromodynamics, 9: 11112 (J;US)
Postulated Particles
Towards a dynamical preon model, 9: 11091 (R;XA)
T Invariance
Enhanced T-nonconserving nuclear moments, 9: 11088 (J;US)
Two-Dimensional Calculations
Functional approaches to two-dimensional QCD, 9: 11108 (RA;SU)

QUANTUM ELECTRODYNAMICS
Renormalization
Renormalization of the QEMD of a dyon field, 9: 11096 (R;XA)

QUANTUM FIELD THEORY
See also LATTICE FIELD THEORY
QUANTUM CHROMODYNAMICS
QUANTUM ELECTRODYNAMICS
Massless Particles
Schwinger model in temporal gauge, 9: 11110 (R;HU)
Solitons
Stability domain of stationary solitons in a many-charge field model with non-Abelian internal symmetry, 9: 11098 (R;XA)

QUANTUM MECHANICS
Conservation Laws
Value preserving quantum measurements: impossibility theorems and lower bounds for the distortion, 9: 11166 (R;XA)
Ergodic Hypothesis
Quantum manifestations of classical resonance zones, 9: 11177 (J;US)
Perturbation Theory
Formal perturbation theory, 9: 11168 (RA;DE;In German)

QUARK MATERIAL
See QUARK MATTER

QUARK MATTER
Meson radiation from quark-gluon plasma, 9: 11081 (R;US)

QUARK MODEL
See also COLOR MODEL
FLAVOR MODEL
Particle Structure
Quark approach to Santilli's conjecture on hadronic structure - II, 9: 11073 (R;XA)

QUARK PLASMA
See QUARK MATTER

QUARK SEA
See QUARK MATTER

QUARK-ANTIQUARK INTERACTIONS
Quark Model
Effective interactions of quarks and static hadron properties, 9: 11078 (RA;SU;In Russian)

QUARK-GLUON PLASMA
See QUARK MATTER

QUARK-QUARK INTERACTIONS
Particle Production
Multiquark resonance state, 9: 11079 (RA;SU;In Russian)

QUARKS
Fragmentation
Results from HRS at PEP, 9: 11051 (R;US)
Jet Model
Montecarlo studies of t quarks, 9: 11065 (R;US)
Mass
Cross section for inclusive deep inelastic scattering in the impulse approximation: scale invariance and mass problems, 9: 11077 (R;FR;In French)
Mass Spectra
Lepton and quark families as quantum-dynamical systems, 9: 11092 (R;XA)
Particle Production
Montecarlo studies of t quarks, 9: 11065 (R;US)
Quantum Field Theory
Lepton and quark families as quantum-dynamical systems, 9: 11092 (R;XA)
Semileptonic Decay
Latest results from the MARK II at PEP, 9: 11059 (R;US)
Weak Interactions
Parametrization of the Kobayashi-Maskawa matrix, 9: 11089 (J;US)

QUARTZ
Biological Effects
Particulate oil shale inhalation and pulmonary inflammatory response in rats, 9: 10926 (R;US)
Inhalation
Particulate oil shale inhalation and pulmonary inflammatory response in rats, 9: 10926 (R;US)
Particulates
Particulate oil shale inhalation and pulmonary inflammatory response in rats, 9: 10926 (R;US)

QUATERNARY COMPOUNDS
For quaternary ammonium compounds.
See also CHOLINE
Structural Chemical Analysis
Some nitrogen-14 NMR studies in solids, 9: 10350 (R;US)

QUEBEC
Uranium Deposits
Genesis of Canadian uraniferous quartz-pebble conglomerate ores, 9: 9439 (RA;US)

QUINOLINES
Enthalpy
Enthalpy measurement of coal-derived liquids. Final report, April 1981-September 1983 (517 to 10342 kPa; 340 to 664 K), 9: 9228 (R;US)

Hydrogenation
New catalysts for coal liquid upgrading. Quarterly report, September 1-November 30, 1983, 9: 9230 (R;US)
QUINONES
See also ANTHRAQUINONES
Electron Transfer
Photochemical reactions of complex molecules in condensed phase. Progress report, March 1, 1983-February 28, 1984, 9: 10377 (R;US)

R

R-2 REACTOR
Neutron Flux
Progress report 1982, 9: 9867 (R;SE)
Research Programs
Progress report 1982, 9: 9867 (R;SE)
RA 333
See ALLOY-RA-333
RADAPPERTIZATION
See RADIOSTERILIZATION
RADAR
Antennas
Computer assessment of electromagnetic means of detecting approaching cruise missiles, 9: 10454 (R;US)
Computerized Simulation
Computer assessment of electromagnetic means of detecting approaching cruise missiles, 9: 10454 (R;US)
RADIATION ACCIDENTS
Emergency Plans
Accident analysis and DOE criteria, 9: 9880 (RA;US)
Environmental Impacts
Accidental releases of radionuclides: a preliminary study of the consequences of land contamination, 9: 10712 (R;GB)
RADIATION BURDEN
See RADIATION DOSES
RADIATION CHEMISTRY
Research Programs
Progress report 1982, 9: 9867 (R;SE)
RADIATION CHIMERAS
Spleen Colony Formation
Relationship between number of spleen colonies and ^{125}IdUrd incorporation into spleen and femur, 9: 10893 (J;US)
RADIATION DAMAGE (BIOLOGICAL)
See RADIATION INJURIES
RADIATION DETECTION
See also COSMIC RAY DETECTION
GAMMA DETECTION
NEUTRINO DETECTION
NEUTRON DETECTION
X-RAY DETECTION
Efficiency
Calculation of detection efficiency for beryllium-8, 9: 10620 (J;US)
Neutron Sources
Application of a 14 MeV neutron source to the detection of special nuclear material diversion, 9: 9532 (J;US)
Nuclear Instrument Modules
Isotope tracer measurement system incorporating the HP85 computer, 9: 10568 (R;GB)
Spectra Unfolding
The role of prior information in radiation spectrum unfolding problems, 9: 10617 (J;US)
RADIATION DETECTION AND RANGE

RADIATION DETECTORS
See also CHERENKOV COUNTERS
DIELECTRIC TRACK DETECTORS
PROPORTIONAL COUNTERS
SCINTILLATION COUNTERS
SEMICONDUCTOR DETECTORS
SHOWER COUNTERS
WALL-LESS COUNTERS
Calibration
Calibration of radon daughter recorders, 9: 10615 (R;SE;In Swedish)
Design
Capabilities of the Los Alamos National Laboratory's environmental emergency response vehicle, 9: 10573 (RA;US)
Efficiency
Calculation of detection efficiency for beryllium-8, 9: 10620 (J;US)
RADIATION DOSES
Data Covariances
Some problems in evaluating radiation dose for effective environmental assessment, 9: 10682 (RA;US)
Mathematical Models
Dose projection considerations for emergency conditions at nuclear power plants, 9: 9881 (RA;US)
Some problems in evaluating radiation dose for effective environmental assessment, 9: 10682 (RA;US)
Recommendations
Oral intake of radionuclides in the population. A review of biological factors of relevance for assessment of absorbed dose at long term waste storage, 9: 10847 (R;SE)
RADIATION DOSIMETRY
See DOSIMETRY
RADIATION EXPOSURE (DOSES)
See RADIATION DOSES
RADIATION HAZARDS
Risk Assessment
Linear hypothesis and radiation carcinogenesis. Arguments for and against its use in estimating risks at low doses, 9: 10887 (R;NZ)
Radiation risk estimation. Major developments and controversies 1976-1981, 9: 10888 (R;NZ)
RADIATION HYGIENE
See RADIATION PROTECTION
RADIATION INJURIES
Ultrastructural Changes
Ultrastructural effects of radiation on cells and tissues: concluding remarks, 9: 10840 (R;US)
RADIATION MONITORING

RADIOACTIVE WASTES
Documentation
Title list of documents made publicly available, October 1-31, 1983. Vol. 5, No. 10, 9: 9824 (R;US)
Isotope Ratio
ORIGEN2: A versatile computer code for calculating the nuclide compositions and characteristics of nuclear materials, 9: 9829 (J;US)
Packaging
Justification and crush tests compared with fall tests in relation to changes in existing regulations (Of packaging for radiactive material transport), 9: 10399 (R;FR;In French, English)
Transport
How safety procedures can follow the evolution in transport of RAM, 9: 9450 (R;FR)
Operational and regulatory outlook for the transport of radioactive material, 9: 9448 (R;FR)
Transportation of radioactive material (RAM) to and from US nuclear power plants. Draft environmental assessment, 9: 9452 (R;US)
RADIOACTIVE PARTICULATES
See RADIOACTIVE AEROSOLS
RADIOACTIVE TRACERS
See RADIOPHARMACEUTICALS
RADIOACTIVE WASTE DISPOSAL
Carbon 14
Compatibility of technologies with regulations in the waste management of H-3, I-129, C-14, and Kr-85. Part II. Analysis, 9: 9457 (R;US)
Containers
Long-term performance of materials used for high-level waste packaging. Second quarterly report, year two, July 1983-September 1983. Volume 2, 9: 9484 (R;US)
Cost
Economics of mined geologic repositories, 9: 9466 (R;US)
Coverings
Uranium mill tailings remedial action project (UMITRAP) - Cover and liner technology development project, 9: 9507 (BA;XA)
Engineered Safety Systems
Evaluation of phyllosilicates as a buffer component in the disposal of nuclear fuel waste, 9: 9456 (R;CA)
Environmental Impacts
Radiological protection aspects of shallow land burial of PWR operating wastes, 9: 9518 (R;GB)
Geochemistry
Fourth annual report of the Canadian Nuclear Fuel Waste Management Program, 9: 9455 (R;CA)
Temporal stability of chelated Co and Zn in reducing geochemical environments, 9: 9513 (J;US)
Geology
Fourth annual report of the Canadian Nuclear Fuel Waste Management Program, 9: 9455 (R;CA)
High-Level Radioactive Wastes
Corrosion problems related to the containment of high-level nuclear waste for disposal, 9: 9471 (R;GB)
International program to study subseabed disposal of high-level radioactive wastes, 9: 9488 (R;US)
Long-term performance of materials used for high-level waste packaging. Second quarterly report, year two, July 1983-September 1983. Volume 2, 9: 9484 (R;US)
Staff analysis of public comments on proposed rule 10 CFR Part 60, Disposal of High-Level Radioactive Wastes in Geologic Repositories, 9: 9483 (R;US)
Hydrology
Fourth annual report of the Canadian Nuclear Fuel Waste Management Program, 9: 9455 (R;CA)
International Cooperation
International program to study subseabed disposal of high-level radioactive wastes, 9: 9488 (R;US)
Iodine 129
Compatibility of technologies with regulations in the waste management of H-3, I-129, C-14, and Kr-85. Part II. Analysis, 9: 9457 (R;US)
Krypton 85
Compatibility of technologies with regulations in the waste management of H-3, I-129, C-14, and Kr-85. Part II. Analysis, 9: 9457 (R;US)
Licensing
Staff analysis of public comments on proposed rule 10 CFR Part 60, Disposal of High-Level Radioactive Wastes in Geologic Repositories, 9: 9483 (R;US)
Low-Level Radioactive Wastes
Low-level nuclear waste shallow land burial trench isolation. Annual report, October 1982-September 1983, 9: 9485 (R;US)
Recommended radiation protection practices for low-level waste disposal sites, 9: 9519 (R;US)
National Program Plans
Focus for the NWTS program, 9: 9508 (J;US)
Packaging
Characteristics of radioactive waste forms conditioned for storage and disposal: Guidance for the development of waste acceptance criteria. Report by an advisory group meeting on conditioning requirements for storage and disposal of radioactive wastes organized by the IAEA and held in Vienna, 23-27 August 1982, 9: 9479 (R;XA)
Long-term performance of materials used for high-level waste packaging. Second quarterly report, year two, July 1983-September 1983. Volume 2, 9: 9484 (R;US)
Planning
Sizewell 'B' power station public inquiry: CEGB proof of evidence. The disposal of low level and intermediate level solid wastes, 9: 9460 (R;GB)
Program Management
Nuclear waste disposal and NEPA compliance, 9: 9464 (RA;US)
Radiation Protection
Recommended radiation protection practices for low-level waste disposal sites, 9: 9519 (R;US)
Radionuclide Migration
Radiological protection aspects of shallow land burial of PWR operating wastes, 9: 9518 (R;GB)
Research Programs
Low-level nuclear waste shallow land burial trench isolation. Annual report, October 1982-September 1983, 9: 9485 (R;US)
Nevada Nuclear Waste Storage Investigations. Quarterly report, April-June 1983, 9: 9486 (R;US)
Sea Bed
International program to study subseabed disposal of high-level radioactive wastes, 9: 9488 (R;US)
Site Selection
Nuclear waste disposal and NEPA compliance, 9: 9464 (RA;US)
Tritium
Compatibility of technologies with regulations in the waste management of H-3, I-129, C-14, and Kr-85. Part II. Analysis, 9: 9457 (R;US)

Underground Disposal
Alternative strategy for commercial high-level radioactive waste management, 9: 9497 (BA;XA)
Corrosion problems related to the containment of high-level nuclear waste for disposal, 9: 9471 (R;GB)
Fourth annual report of the Canadian Nuclear Fuel Waste Management Program, 9: 9455 (R;CA)
Radiological protection aspects of shallow land burial of PWR operating wastes, 9: 9518 (R;GB)
Temporal stability of chelated Co and Zn in reducing geochemical environments, 9: 9513 (J;US)
United Kingdom
Sizewell 'B' power station public inquiry: CEGB proof of evidence. The disposal of low level and intermediate level solid wastes, 9: 9460 (R;GB)
Waste Forms
Cement-based waste forms for disposal of Savannah River Plant low-level radioactive salt waste, 9: 9472 (R;US)

RADIOACTIVE WASTE FACILITIES
Decontamination
Engineering evaluation of alternatives for the disposition of Niagara Falls Storage Site, its residues and wastes, 9: 9470 (R;US)
Design
Detailed site study phase: an environmental approach to planning and design (High-level radioactive waste repositories), 9: 9463 (RA;US)
Maintenance
Engineering evaluation of alternatives for the disposition of Niagara Falls Storage Site, its residues and wastes, 9: 9470 (R;US)
Planning
Detailed site study phase: an environmental approach to planning and design (High-level radioactive waste repositories), 9: 9463 (RA;US)
Radiation Monitoring
Improvements to environmental surveillance at the Radioactive Waste Management Complex (RWMC) of the Idaho National Engineering Laboratory, 9: 9465 (RA;US)
Radiation Protection
ALARA beyond dollars per person-rem, 9: 9517 (RA;US)
Site Selection
Detailed site study phase: an environmental approach to planning and design (High-level radioactive waste repositories), 9: 9463 (RA;US)
Surveillance
Engineering evaluation of alternatives for the disposition of Niagara Falls Storage Site, its residues and wastes, 9: 9470 (R;US)

RADIOACTIVE WASTE MANAGEMENT
Engineering
Engineering evaluation of alternatives for the disposition of Niagara Falls Storage Site, its residues and wastes, 9: 9470 (R;US)
Low-Level Radioactive Wastes
Engineering evaluation of alternatives for the disposition of Niagara Falls Storage Site, its residues and wastes, 9: 9470 (R;US)
Research Programs
Fourth annual report of the Canadian Nuclear Fuel Waste Management Program, 9: 9455 (R;CA)
Waste management research abstracts no. 14, 9: 9480 (R;XA)

RADIOACTIVE WASTE PROCESSING
Alpha-Bearing Wastes
Decontamination of transuranic contaminated metals by melt refining, 9: 9500 (J;US)
Selected transuranic waste immobilization systems, 9: 9509 (J;US)
Cesium 137
Salt decontamination demonstration test results, 9: 9475 (R;US)
Denitration
Trioxane-initiated formic acid denitration, 9: 9446 (R;US)
Encapsulation
Selected transuranic waste immobilization systems, 9: 9509 (J;US)
High-Level Radioactive Wastes
Alternative strategy for commercial high-level radioactive waste management, 9: 9497 (BA;XA)
Fourth annual report of the Canadian Nuclear Fuel Waste Management Program, 9: 9455 (R;CA)
Solidification of Savannah River Plant high-level waste, 9: 9474 (R;US)
Status of high-level waste solidification at West Valley, 9: 9502 (J;US)
Water decontamination process improvement tests and considerations, 9: 9940 (J;US)
Intermediate-Level Radioactive Wastes
Fourth annual report of the Canadian Nuclear Fuel Waste Management Program, 9: 9455 (R;CA)
Low-Level Radioactive Wastes
Cement-based waste forms for disposal of Savannah River Plant low-level radioactive salt waste, 9: 9472 (R;US)
Fourth annual report of the Canadian Nuclear Fuel Waste Management Program, 9: 9455 (R;CA)
Precipitation
Salt decontamination demonstration test results, 9: 9475 (R;US)
Sodium
Sodium conversion experiments in the Inert Carrier Process demonstration plant, 9: 9498 (J;US)
Solidification
Fourth annual report of the Canadian Nuclear Fuel Waste Management Program, 9: 9455 (R;CA)
Incorporation of radionuclides in crystalline titanates, 9: 9511 (J;US)
ORNL grouting technologies for immobilizing hazardous wastes, 9: 9469 (R;US)
Selected transuranic waste immobilization systems, 9: 9509 (J;US)
Sodium conversion experiments in the Inert Carrier Process demonstration plant, 9: 9498 (J;US)
Status of high-level waste solidification at West Valley, 9: 9502 (J;US)
Strontium 90
Salt decontamination demonstration test results, 9: 9475 (R;US)
Technology Assessment
Status, direction, and critical issues of waste treatment technology, 9: 9495 (J;US)
Vitrification
Glasses used for the high level radioactive wastes storage, 9: 9458 (R;FR;In French)
Mechanical properties of some candidate glasses for high-level radioactive waste management, 9: 9459 (R;FR)
Solidification of Savannah River Plant high-level waste, 9: 9474 (R;US)

RADIOACTIVE WASTE STORAGE
See also MONITORED RETRIEVABLE STORAGE
Low-Level Radioactive Wastes
Engineering evaluation of alternatives for the disposition of Niagara Falls Storage Site, its residues and wastes, 9: 9470 (R;US)
Materials Handling
Prediction of centrifugal pump cleaning ability in waste sludge, 9: 9510 (J;US)
Packaging
Characteristics of radioactive waste forms conditioned for storage and disposal: Guidance for the development of waste acceptance criteria. Report by an advisory group meeting on conditioning requirements for storage and disposal of radioactive wastes organized by the IAEA and held in Vienna, 23-27 August 1982, 9: 9479 (R;XA)

RADIOACTIVE WASTES
See also ALPHA-BEARING WASTES
HIGH-LEVEL RADIOACTIVE WASTES
LOW-LEVEL RADIOACTIVE WASTES
RADIOACTIVE EFFLUENTS
Filtration
Development of a promising filtration method for liquid clarification in nuclear facilities (For TMI-2 water, reprocessing dissolver solutions, $ZnBr_2$ shielding solutions), 9: 9879 (R;US)

Ion Mobility
Possible effects of alpha and beta radiolysis on the matrix dissolution of spent nuclear fuel, 9: 9491 (R;SE)
Leachates
Some deficiencies in analyzing leachates and reporting results, 9: 9512 (J;US)
Leaching
Physical tests on solidified decontamination wastes from Dresden Unit 1, 9: 9858 (R;US)
Results from long-term use of the MCC-1 static leach test method, 9: 9501 (J;US)
Radioactive Waste Management
Management of uranium mill tailings in the United States of America, 9: 9504 (BA;XA)
Radiochemical Analysis
Some deficiencies in analyzing leachates and reporting results, 9: 9512 (J;US)
Radiolysis
Possible effects of alpha and beta radiolysis on the matrix dissolution of spent nuclear fuel, 9: 9491 (R;SE)
Radionuclide Migration
Movement of a redox front downstream from a repository for nuclear waste, 9: 10716 (R;SE)
Reviews
Radioactive wastes, 9: 9496 (J;US)
Risk Assessment
Radioactive wastes, 9: 9496 (J;US)
Waste Management
Management of radioactive waste from uranium mining and milling, 9: 9503 (BA;XA)

RADIOACTIVITY TRANSPORT
Distribution Functions
Radionuclide transport in a single fissure. A laboratory study, 9: 10717 (R;SE)

RADIOASSAY
Uses
Potential for the application of nuclear techniques in selected developing countries in Africa, 9: 10960 (R;GB)

RADIOBIOLOGICAL EFFECTS

RADIOPASTEURIZATION
International Agreements
International status of food irradiation, 9: 10889 (R;NZ)
RADIOPHARMACEUTICALS
Receptors
Specific binding of [^{11}C]spiroperidol in rat brain in vivo, 9: 10832 (J;GB)
RADIOPRESERVATION
International Agreements
International status of food irradiation, 9: 10889 (R;NZ)
Recommendations
Advice concerning categories of food irradiation, 9: 10913 (B;NL;In Dutch)
RADIOPROTECTIVE SUBSTANCES
See also CYSTAMINE
Evaluation
Effect of K, Mg salts of aspartic acid on neuromuscular activity of mice following chronic irradiation, 9: 10865 (RA;CS;In Slovak)
RADIOSTERILIZATION
International Agreements
International status of food irradiation, 9: 10889 (R;NZ)
RADIOSURGERY
See RADIOTHERAPY
RADIOTHERAPY
Accelerators
On achieving a clinically useful D-T neutron isocentric therapy system, 9: 10819 (J;US)
Particle accelerators for radiotherapy - A review, 9: 10816 (J;US)
Beam Profiles
The treatment head design for medical linear accelerators, 9: 10820 (J;US)
Biological Radiation Effects
Biological effectiveness and application of heavy ions in radiation therapy described by a physical and biological model, 9: 10806 (R;DK)
Heavy Ions
Biological effectiveness and application of heavy ions in radiation therapy described by a physical and biological model, 9: 10806 (R;DK)
Linear Accelerators
Electron linear accelerator structures and design for radiation therapy machines, 9: 10818 (J;US)
Electron linear accelerator for the pion therapy, 9: 10821 (J;US)
The treatment head design for medical linear accelerators, 9: 10820 (J;US)
Microtrons
Microtrons for electron and photon radiotherapy, 9: 10817 (J;US)
Neutron Sources
Intense neutron source development for use in cancer therapy, 9: 10822 (J;US)
Pion Beams
Electron linear accelerator for the pion therapy, 9: 10821 (J;US)
Pion Dosimetry
Negative pion capture in biological material, 9: 11157 (B;GB)
Planning
Transverse tomography and radiotherapy. The use of computer tomography and transverse analog tomography for radiotherapy treatment planning, 9: 10797 (R;NL;In Dutch)
Side Effects
Pion radiotherapy at LAMPF, 9: 10909 (J;US)
Thermoluminescent Dosimetry
A thermoluminescence dosimetry system for use in a survey of high-energy Bremsstrahlung dosimetry, 9: 11158 (J;US)
RADIOWAVE RADIATION
Occupational Safety
Examination of radiofrequency radiation in the plastic and furniture industries, 9: 10948 (R;NO;In Norwegian)
Radiation Doses
Examination of radiofrequency radiation in the plastic and furniture industries, 9: 10948 (R;NO;In Norwegian)
Safety Standards
Administrative norms on radiofrequency radiation for occupationally exposed persons, 9: 10947 (R;NO;In Norwegian)
Test Facilities
National RF Test Facility as a multipurpose development tool, 9: 11270 (R;US)
RADIUM 226
Alpha Spectroscopy
Development of solid radium-226 reference materials, 9: 10313 (R;US)
Calibration Standards
Development of solid radium-226 reference materials, 9: 10313 (R;US)
Gamma Spectroscopy
Development of solid radium-226 reference materials, 9: 10313 (R;US)
Intestinal Absorption
Oral intake of radionuclides in the population. A review of biological factors of relevance for assessment of absorbed dose at long term waste storage, 9: 10847 (R;SE)
Radioecological Concentration
Alpha-activities in environmental samples, 9: 10710 (RA;AT;In German)
Trace element geochemistry of the South Atlantic Bight. Progress report, 9: 10737 (R;US)
Spatial Distribution
Trace element geochemistry of the South Atlantic Bight. Progress report, 9: 10737 (R;US)
Tissue Distribution
Dose-response relationships for bone cancers from plutonium in dogs and people, 9: 10900 (J;GB)
Skeletal retention and distribution of ^{226}Ra and ^{239}Pu in beagles injected at ages ranging from 2 days to 5 years, 9: 10906 (J;GB)
RADIUM F
See POLONIUM 210
RADON
Daughter Products
Lung cancer epidemiology in New Mexico uranium miners. First annual report, 1 April 1983-1 January 1984, 9: 10845 (R;US)
Ecological Concentration
Guidelines for monitoring indoor air quality. Research report, 9: 10670 (R;US)
Radioecological Concentration
Radon measurements indoors. An evaluation of performed measurements, 9: 10690 (R;SE;In Swedish)
Survey of indoor radon concentrations in Sweden, 9: 10693 (R;SE;In Swedish)
RADON 222
Radioecological Concentration
Trace element geochemistry of the South Atlantic Bight. Progress report, 9: 10737 (R;US)
Spatial Distribution
Trace element geochemistry of the South Atlantic Bight. Progress report, 9: 10737 (R;US)
RADON ISOTOPES
See also RADON 222
Radiation Monitoring
Calibration of radon daughter recorders, 9: 10615 (R;SE;In Swedish)
RADURIZATION
See RADIOPRESERVATION
RAFT RIVER VALLEY
Fluid Injection
Response of east Mesa and Raft River reservoirs to injection-backflow testing, 9: 9735 (R;US)
Geothermal Fields
Hydrothermal Injection Research Program. Annual progress report, FY 1983, 9: 9738 (R;US)
RARE EARTH COMPOUNDS
See also CERIUM COMPOUNDS

TERBIUM COMPOUNDS
THORIANITE

Hyperfine Structure
Charge and spin density in s-stable rare earth intermetallic compounds, 9: 11007 (R;NL)

RARE EARTHS

XENON

Excitons
Exciton kinetics in condensed rare gases, 9: 11011 (J;US)

Penning Effect
Exciton kinetics in condensed rare gases, 9: 11011 (J;US)

Radiolysis
Physico-chemical processes in electron beam irradiated gases, 9: 10385 (RA;AU)

RATEMETERS (EXPOSURE)
See EXPOSURE RATEMETERS

RAYLEIGH-TAYLOR INSTABILITY
Physics of laser compression of plasmas, 9: 11236 (R;GB)

RBE

Evaluation
Conceptual basis for evaluating risk from low-level radiation exposure, 9: 10839 (R;US)

RDF
See REFUSE DERIVED FUELS

REACTIVITY COEFFICIENTS

Three-Dimensional Calculations
Group collapsing strategy for 3D design calculations, 9: 9816 (R;FR)

REACTOR ACCIDENTS
See also FUEL ELEMENT FAILURE
LOSS OF COOLANT
LOSS OF FLOW
REACTOR CORE DISRUPTION
TRANSIENT OVERPOWER ACCIDENTS

Computerized Simulation
CONTAIN calculations of severe accident sequences at the Surry Nuclear Power Plant, 9: 9914 (R;US)

Emergency Plans
Accident analysis in the framework of emergency provisions. A study on the current state and further development of the accident analysis methods in the framework of the emergency provisions for nuclear power plants with light water moderated pressurized water reactor, 9: 9890 (R;DE;In German)

Fission Product Release
Gas-phase transport of fission products, 9: 9907 (RA;US)

Radioactive Aerosols
Suppression pool modeling (BWR), 9: 9912 (R;US)

REACTOR COMPONENTS
See also BREEDING BLANKETS
CONTROL ELEMENTS
FUEL ELEMENTS

Failures
Dependency models and probability of joint events, 9: 9889 (R;NO)

Fatigue
Life prediction in low cycle fatigue using elastic analysis, 9: 10210 (R;FR)

Mechanical Vibrations
Vibration signature of PWR internal structures in various abnormal conditions, 9: 9783 (R;FR)

Reliability
Light-water reactors reference system classification for the European Reliability Data System (ERDS), 9: 9774 (R;US)

Strains
Progress in developing constitutive equations for inelastic design analysis, 9: 9822 (J;US)

Stress Analysis
Progress in developing constitutive equations for inelastic design analysis, 9: 9822 (J;US)

REACTOR CONTROL RODS
See CONTROL ELEMENTS

REACTOR CONTROL SYSTEMS

Process Computers
DUAL-PROCESS, a highly reliable process control system, 9: 9855 (R;HU)

REACTOR CONTROL THEORY
See REACTOR KINETICS

REACTOR CORE DISRUPTION
TRAN experiment series in the SANDIA ACRR facility, 9: 9927 (BA;FR)

Computerized Simulation
SIMMER as a safety analysis tool, 9: 9924 (BA;FR)
Status and validation of the SAS4A accident analysis code system, 9: 9923 (BA;FR)

Reactor Safety Experiments
SIMMER analysis of SRI postdisassembly expansion experiments, 9: 9936 (BA;FR)

S Codes
SIMMER analysis of SRI postdisassembly expansion experiments, 9: 9936 (BA;FR)

REACTOR CORE RESTRAINTS

Thermal Insulation
Feasibility study of thermal insulation materials for core support of experimental VHTR, 9: 9803 (RA;US)

Thermal Stresses
Thermal stress analysis of a Fort St. Vrain core support block under accident conditions, 9: 9807 (RA;US)

REACTOR FUEL ELEMENTS
See FUEL ELEMENTS

REACTOR KINETICS

Computerized Simulation
Standards for maintenance documentation of COSMOS programs, 9: 9811 (R;GB)

Correlation Functions
Studies to the stochastic theory of the coupled reactor kinetic-thermohydraulic systems Pt. 1. Space dependent model with one variable, 9: 9833 (R;HU)

REACTOR LICENSING

Reviews
Regulatory licensing: status summary report, November 1-30 1983. Volume 12, No. 11, 9: 10013 (R;US)
Regulatory licensing: status summary report, October 1-31, 1983. Volume 12, No. 10, 9: 10012 (R;US)

REACTOR MAINTENANCE

Information Systems
Optimization of the man-machine interface for LMFBRs, 9: 9930 (BA;FR)

REACTOR MATERIALS
To be assigned in conjunction with the specific descriptor for the material used in a reactor, provided this descriptor is not yet up-posted to reactor materials.

Creep
Creep properties of Hastelloy X in a carburizing helium environment, 9: 9794 (RA;US)
Effect of HTGR helium on fatigue and creep properties of 2 1/4Cr-1Mo steel, 9: 9798 (RA;US)
Long term creep behavior of Incoloy 800H and Hastelloy X in simulated HTGR environments, 9: 9793 (RA;US)
Long-term creep testing of 2 1/4 Cr-1 Mo steel in HTGR helium, 9: 9795 (RA;US)

Deformation
Analytical study of stress and deformation of HTR fuel blocks, 9: 9806 (RA;US)

Embrittlement
Toughness degradation of 2 1/4Cr-1Mo steel caused by isothermal ageing, stress ageing and neutron irradiation, 9: 9796 (RA;US)

Fatigue
Effect of HTGR helium on fatigue and creep properties of 2 1/4Cr-1Mo steel, 9: 9798 (RA;US)
Effect of simulated HTGR primary circuit helium on properties of structural alloys, 9: 9799 (RA;US)
Effects of HTGR helium on the high cycle fatigue of structural materials, 9: 9797 (RA;US)
Grain boundary precipitation treatment for improving high temperature low cycle fatigue strength of SSS113M for VHTR, 9: 9800 (RA;US)
Fracture Mechanics
Fracture mechanics data deduced from thermal-shock and related experiments with PWR pressure vessel material, 9: 9787 (J;US)
Materials Testing
Predictive testing of performance of metals in HTR service environments, 9: 9791 (RA;US)
Mechanical Properties
Bowing test of HTGR graphite sleeve - out of pile heating experiment, 9: 9808 (RA;US)
Studies on mechanical properties of graphites for HTGR, 9: 9802 (RA;US)
Oxidation
Graphite oxidation in HTGR atmosphere, 9: 9801 (RA;US)
Physical Radiation Effects
An analysis of dynamic crack propagation and arrest in a nuclear pressure vessel under thermal shock conditions, 9: 9841 (J;US)
Stress Corrosion
Stress-corrosion cracking in light-water reactors, 9: 9778 (J;US)
Stresses
Analytical study of stress and deformation of HTR fuel blocks, 9: 9806 (RA;US)
Tensile Properties
Effect of corroded surface layer on tensile properties of heat resisting alloys, 9: 10245 (RA;US)
Effect of simulated HTGR primary circuit helium on properties of structural alloys, 9: 9799 (RA;US)
High temperature ductility of austenitic alloys exposed to thermal neutrons, 9: 10244 (RA;US)

REACTOR NOISE
Spectral Density
Studies to the stochastic theory of the coupled reactor kinetic-thermohydraulic systems Pt. 1. Space dependent model with one variable, 9: 9833 (R;HU)

REACTOR OPERATION
See also REACTOR START-UP
Data Compilation
Licensed operating reactors. Status summary report, data as of 7-31-83. Volume 7, No. 8, 9: 10010 (R;US)

REACTOR OPERATORS
Working Conditions
U.S. liquid metal fast breeder reactor man-machine interface program, 9: 9931 (BA;FR)

REACTOR PHYSICS
Use only for indexing articles of very broad coverage, such as annual reviews, text book, etc.
Shielding
Requirement of nuclear data and inaccuracy of nuclear data in evaluating the target values of shielding calculations for the light water reactor and the high-temperature reactor, 9: 9779 (B;DE;In German)

REACTOR SAFETY
Evaluation
Systematic evaluation program. Status summary report. Volume 5, No. 10, 9: 9896 (R;US)
Information Systems
Guide on a national system for collecting, assessing and disseminating information on safety-related events in nuclear power plants. A pre-publication working document, 9: 9888 (R;XA)
Meetings
Third Japan-US seminar on HTGR safety technology: proceedings. Volume II, 9: 9904 (R;US)
Public Opinion
Safety: Science and technique in social problems, 9: 10007 (RA;NL;In Dutch)
Research Programs
Light Water Reactor Safety Research Program. Semiannual report, April-September 1982, 9: 9909 (R;US)

REACTOR SAFETY EXPERIMENTS
Research Programs
PFR/TREAT programme: objectives, progress and future work, 9: 9926 (BA;FR)

REACTOR SHUTDOWN
Economic Impact
Efficient simulation approach for evaluating the potential effects of nuclear power plant shutdowns on electrical utility generating systems, 9: 9971 (R;US)

REACTOR SITES
Ground Motion
Determination of seismic reference motions on nuclear sites in France, 9: 9876 (R;FR;In French)

REACTOR START-UP
Monitoring
System for monitoring the IBR-2 pulsed reactor power for the experiments during the reactor operating start-up, 9: 9866 (R;SU;In Russian)

REACTORS

Economic Analysis
Building energy use compilation and analysis (BECA). Part B: retrofit of existing North American residential buildings, 9: 10089 (J;CH)
Building energy use compilation and analysis (BECA). Part C: conservation progress in retrofitted commercial buildings, 9: 10090 (J;CH)

REVERSE-FIELD PINCH
Design
Plasma engineering design of a compact reversed-field pinch reactor (CRFPR), 9: 11321 (R;US)
Electronic Circuits
Electrical design of a high current density air-core reversed-field pinch ZTP, 9: 11320 (R;US)
Magnet Coils
Poloidal field system design for the ZT-H reversed field pinch experiment, 9: 11318 (R;US)
Toroidal magnetic field system for a 2-MA reversed-field pinch experiment, 9: 11319 (R;US)
Magnetic Field Configurations
Magnetic field topologies of the relaxed states of turbulent discharges, 9: 11316 (R;US)

RF SYSTEMS
Computerized Simulation
Numerical simulation of high power R.F. sources, 9: 10485 (J;US)
Performance
Experiments with very high power rf pulses at SLAC, 9: 10523 (J;US)
RHODIUM
Catalytic Effects
Promotion effects on the synthesis of higher alcohols. Fifth quarterly report, September 1983-November 1983, 9: 9547 (R;US)
Emission Spectroscopy
Inductively coupled plasma-atomic emission spectrometry (ICP-AES) in support of nuclear waste management, 9: 10311 (R;US)
RHODIUM ALLOYS
Crystal Field
Experimental study of praseodymium intermetallic compounds at low temperatures, 9: 10233 (R;NL)
Electronic Structure
Experimental study of praseodymium intermetallic compounds at low temperatures, 9: 10233 (R;NL)
RHODIUM BORIDES
Ferromagnetism
Influence of strain on the coexistence state of ferromagnetic superconductors, 9: 10275 (J;US)
Superconductivity
Influence of strain on the coexistence state of ferromagnetic superconductors, 9: 10275 (J;US)
RHODOPSIN
Biological Functions
Characterization and isolation of a light driven sodium pump from membranes of Halobacterium halobium. Final technical progress report, 9: 10767 (R;US)
Photochemical Reactions
Characterization and isolation of a light driven sodium pump from membranes of Halobacterium halobium. Final technical progress report, 9: 10767 (R;US)
RHODOSPIRILLUM
Carboxylase
Purification and sequencing of cyanogen bromide fragments from ribulosebisphosphate carboxylase/oxygenase from Rhodospirillum rubrum, 9: 10775 (J;US)
Oxygenases
Purification and sequencing of cyanogen bromide fragments from ribulosebisphosphate carboxylase/oxygenase from Rhodospirillum rubrum, 9: 10775 (J;US)
RHR SYSTEMS
Failures
Pretest predictions for degraded shutdown heat-removal tests in THORS-SHRS Assembly 1 (LMFBR), 9: 9882 (R;US)
Test Facilities
Pretest predictions for degraded shutdown heat-removal tests in THORS-SHRS Assembly 1 (LMFBR), 9: 9882 (R;US)
RIBONUCLEASE
See RNA-ASE
RICE
Genetic Radiation Effects
M_1 chimerism following mutagen treatment of seeds in rice and some other cereals, 9: 10849 (RA;XA)
Radiation Chimeras
M_1 chimerism following mutagen treatment of seeds in rice and some other cereals, 9: 10849 (RA;XA)
RICHLAND FFTF REACTOR
See FFTF REACTOR
RIEMANN WAVES
See SHOCK WAVES
RINGHALS-2 REACTOR
Steam Generators
Program for parameter studies of steam generators, 9: 9840 (R;SE;In Swedish)
RINGS (STORAGE)
See STORAGE RINGS
RISA
See ALBUMINS
RISER CRACKING
See COAL LIQUEFACTION
RISK ASSESSMENT
Data Acquisition
Consolidated fuel reprocessing program: a guide for reliability and maintainability data acquisition, 9: 9445 (R;US)
RISOE NATIONAL LABORATORY
Prior to 1978, known as RISOE RESEARCH ESTABLISHMENT and documents written before that date should be so indexed.
Bibliographies
Annual report 1982 chemistry department, 9: 11363 (R;DK)
Research Programs
Reports issued by the Risoe National Laboratory in the series: RISO-R reports and RISO-M reports, 9: 11362 (R;DK)
RIVER DELTAS
Ground Subsidence
Subsidence in coastal Louisiana: causes, rates, and effects on wetlands, 9: 10727 (R;US)
RNA-ASE
Code number 3.1.4.22 and 3.1.4.34.
Biochemical Reaction Kinetics
Investigation of the nature of semisynthetic esterases. Annual progress report, September 15, 1982-September 14, 1983, 9: 10766 (R;US)
Enzyme Activity
Investigation of the nature of semisynthetic esterases. Annual progress report, September 15, 1982-September 14, 1983, 9: 10766 (R;US)
Purification
Investigation of the nature of semisynthetic esterases. Annual progress report, September 15, 1982-September 14, 1983, 9: 10766 (R;US)
ROBINSON-2 REACTOR
Steam Generators
Safety evaluation report related to steam generator repair at H.B. Robinson Steam Electric Plant, Unit No. 2. Docket No. 50-261, 9: 9902 (R;US)
ROCK BURSTS
Inhibition
Rock burst prevention in the Ruhr mining with special regard to the destressing blasting, 9: 10471 (R;DE;In German)
ROCK CAVERNS
Blast Effects
CSM/OCRD hard rock test facility at the CSM experimental mine, Idaho Springs, Colorado (Granitic gneiss), 9: 10964 (R;US)
ROCK MECHANICS
Earth Sciences Division annual report, 1982, 9: 9729 (R;US)
ROCK SALT
See SALT DEPOSITS
ROCK-FLUID INTERACTIONS
Earth Sciences Division annual report, 1982, 9: 9729 (R;US)
ROCKS
See also SYNTHETIC ROCKS
Activation Analysis
14 MeV neutron activation analysis of geological and lunar samples, 9: 10345 (J;US)
Deformation
The relation between deformation recovery and in-situ stress magnitudes, 9: 9419 (J;US)
Sorptive Properties
Diffusion in crystalline rocks of some sorbing and nonsorbing species, 9: 9489 (R;SE)
Stress Analysis
The relation between deformation recovery and in-situ stress magnitudes, 9: 9419 (J;US)
ROCKY FLATS PLANT
Interagency Cooperation
Rocky Flats Plant interaction with the Colorado Department of Health, 9: 9520 (RA;US)
Public Relations
Rocky Flats Plant interaction with the Colorado Department of Health, 9: 9520 (RA;US)
Water Pollution Control
Water monitoring program at the Rocky Flats Plant, 9: 10748 (RA;US)

ROD BUNDLES
Temperature Distribution
Temperature field downstream of an heated bundle mock-up results for different power distribution, 9: 9843 (R;FR)
RODS (CONTROL)
See CONTROL ELEMENTS
ROOF BOLTS
Installation
Automated drilling and bolting, 9: 9296 (BA;US)
ROOTS
Metabolism
Root bioactivity of corn and sunflower as evaluated by ^{75}Se-plant injection technique, 9: 10791 (R;SE)
Plant Growth
Root bioactivity of corn and sunflower as evaluated by ^{75}Se-plant injection technique, 9: 10791 (R;SE)
ROPES
Materials Testing
Bio-engineering and materials testing, 9: 9604 (RA;US)
RUBBERS
Physical Radiation Effects
Radiation stability of plastics and rubbers, 9: 10286 (R;GB)
RUBIDIUM
Activation Analysis
Semiconductor nuclear emission detector using at gamma activation analysis of the environmental objects, 9: 10597 (RA;SU;In Russian)
Trace element analysis of biological materials: Complementarity of PIXE and NAA, 9: 10342 (J;US)
PIXE Analysis
Trace element analysis of biological materials: Complementarity of PIXE and NAA, 9: 10342 (J;US)
RUBIDIUM 75
Beta-Plus Decay
Beta decay of ^{75}Rb to low-lying levels in ^{75}Kr, 9: 11126 (J;US)
RUBIDIUM 77
Energy Levels
Decay of ^{77}Sr and level structure of ^{77}Rb, 9: 11129 (J;US)
RUBIDIUM 81
Production
Production of medical radionuclides with a 24 MeV proton cyclotron, 9: 10809 (J;US)
RUTHENIUM
Catalytic Effects
Cation promotion effects in zeolite-supported F-T catalysts. First quarterly report, September-November 1983, 9: 9538 (R;US)
Potential of novel methanation catalysts, 9: 9250 (BA;US)
Emission Spectroscopy
Inductively coupled plasma-atomic emission spectrometry (ICP-AES) in support of nuclear waste management, 9: 10311 (R;US)
RUTHENIUM 106
Radioecological Concentration
Study of gamma-emitting radionuclides present in the sediments and algae of the "Baie de l'Orne" (Central Normandy Coast) collecting during the years 1980 - 1982, 9: 10752 (R;FR;In French)
RUTHENIUM ALLOYS
Crystal Field
Experimental study of praseodymium intermetallic compounds at low temperatures, 9: 10233 (R;NL)
Electronic Structure
Experimental study of praseodymium intermetallic compounds at low temperatures, 9: 10233 (R;NL)

S

S-1000 RESONANCES
Quark Model
Evident manifestations of four-quark states, 9: 11080 (RA;SU;In Russian)
S-993 RESONANCES
See S-1000 RESONANCES
SACCHAROMYCES CEREVISIAE
Genetic Radiation Effects
Simultaneous detection of changes in chromosome number, gene conversion and intergenic recombination during mitosis of Saccharomyces cerevisiae: spontaneous and ultraviolet light induced events, 9: 10912 (J;DE)
SACLAY LINAC
Beam Dynamics
Transient beam loading calculations and experiment at the Saclay electron linac, 9: 10478 (R;FR)
Beam Production
ALS II: the Saclay proposal for a 2 GeV, CW electron facility, 9: 10477 (R;FR)
Transient beam loading calculations and experiment at the Saclay electron linac, 9: 10478 (R;FR)
Modifications
ALS II: the Saclay proposal for a 2 GeV, CW electron facility, 9: 10477 (R;FR)
Transient beam loading calculations and experiment at the Saclay electron linac, 9: 10478 (R;FR)
SAFEGUARDS
Research Programs
Safeguards and security. Progress report, August 1982-January 1983, 9: 9521 (R;US)
SAFETY ENGINEERING
Regulations
USI A-40 value/impact assessment, 9: 9910 (R;US)
SAFETY (NUCLEAR)
See RADIATION PROTECTION
SAFETY (REACTOR)
See REACTOR SAFETY
SALINE ZONE
See OIL SHALES
PICEANCE CREEK BASIN
SALIVARY GLANDS
Autoradiography
Autoradiographically determined androgen localization in immunity organs of mice following irradiation, 9: 10873 (RA;CS;In Czech)
SALT DEPOSITS
Evaluation
Plans for characterization of salt sites, 9: 9468 (R;US)
Inclusions
Avery Island brine migration tests: installation, operation, data collection, and analysis, 9: 10966 (R;US)
Performance Testing
Salt site performance assessment activities, 9: 9467 (R;US)
Permeability
Avery Island brine migration tests: installation, operation, data collection, and analysis, 9: 10966 (R;US)
Site Selection
Salt site performance assessment activities, 9: 9467 (R;US)
Site Surveys
Plans for characterization of salt sites, 9: 9468 (R;US)
Temperature Distribution
Avery Island brine migration tests: installation, operation, data collection, and analysis, 9: 10966 (R;US)
SAMARIUM
Emission Spectroscopy
Inductively coupled plasma-atomic emission spectrometry (ICP-AES) in support of nuclear waste management, 9: 10311 (R;US)
Inner-Shell Ionization
L-shell ionization cross sections of Ba, Ce, Nd, Sm and Dy for proton energies from 0.5 to 2.0 MeV, 9: 11025 (J;US)
Ion-Atom Collisions
L-shell ionization cross sections of Ba, Ce, Nd, Sm and Dy for proton energies from 0.5 to 2.0 MeV, 9: 11025 (J;US)
SAMARIUM 152
Energy Levels
Pion elastic and inelastic scattering from ^{152}Sm, 9: 11135 (J;US)
SAMARIUM 152 TARGET
Pion Reactions
Pion elastic and inelastic scattering from ^{152}Sm, 9: 11135 (J;US)

SAMPLE PREPARATION
Recommendations
Monitoring for organic contaminants in ground water, 9: 10734 (RA;US)
SAMPLERS
See also AIR SAMPLERS
Field Tests
Determination of in-service vehicle gaseous emissions over a wide range of road operating conditions, 9: 10667 (R;US)
SAMPLING
Quality Control
National survey of smoke and sulphur dioxide - quality control tests on the analysis of samples, 9: 10664 (R;US)
SAN ONOFRE-2 REACTOR
Fluid Poison Control
Boron injection at natural circulation conditions in PWRs, 9: 9780 (R;US)
SANDIA LABORATORIES
Univac Computers
One solution to STAR-1100 in a dual machine environment, 9: 11389 (R;US)
SANDIA PULSE REACTOR-4
See SPR-4 REACTOR
SANDSTONES
Fractures
Western Gas Sands Subprogram. Status report, October-November-December 1982, 9: 9374 (R;US)
Hydraulic Fracturing
Liquid fossil fuel technology. Quarterly technical progress rport, April-June 1983, 9: 9324 (R;US)
Western Gas Sands Subprogram. Status report, October-November-December 1982, 9: 9374 (R;US)
Mineralogy
Mineralogic and petrologic overview of core samples from the Dept. of Energy's western gas sands project multiwell experiment, Piceance Basin, Colorado, 9: 9357 (J;US)
Permeability
A case study of the Wilcox (Lobo) trend in Webb and Zapata counties, Texas, 9: 9375 (J;US)
Retention of polyacrylamide by berea sandstone, baker dolomite, and sodium kaolinite during polymer flooding. Paper SPE 8981, 9: 9323 (R;US)
State of the art hydraulic fracture stimulation treatment for a western tight sand reservoir, 9: 9382 (J;US)
The effect of stress-dependent permeability on gas production and well testing, 9: 9367 (J;US)
Western Gas Sands Subprogram. Status report, October-November-December 1982, 9: 9374 (R;US)
Petrology
Mineralogic and petrologic overview of core samples from the Dept. of Energy's western gas sands project multiwell experiment, Piceance Basin, Colorado, 9: 9357 (J;US)
Porosity
Retention of polyacrylamide by berea sandstone, baker dolomite, and sodium kaolinite during polymer flooding. Paper SPE 8981, 9: 9323 (R;US)
Resource Development
Unconventional gas: recent R and D advances, 9: 9380 (BA;US)
Sampling
Mineralogic and petrologic overview of core samples from the Dept. of Energy's western gas sands project multiwell experiment, Piceance Basin, Colorado, 9: 9357 (J;US)
Sorptive Properties
Retention of polyacrylamide by berea sandstone, baker dolomite, and sodium kaolinite during polymer flooding. Paper SPE 8981, 9: 9323 (R;US)
Stability
Thermophysical behavior of St. Peter sandstone: application to compressed air energy storage in an aquifer, 9: 9943 (R;US)
SANITARY LANDFILLS
Feasibility of in situ solidification/stabilization of landfilled hazardous wastes. Final report Nov 81- Mar 82, 9: 10724 (R;US)
Gas Yields
Analysis of landfill gas enhancement data, Controlled Landfill Project, Mountain View, California, 9: 9543 (BA;US)
Land Pollution Abatement
Hydrogeological conditions for leachate reduction at landfill sites, 9: 10708 (R;SE;In Swedish)
Leaching
Hydrogeological conditions for leachate reduction at landfill sites, 9: 10708 (R;SE;In Swedish)
SARCOMAS
See also FIBROSARCOMAS
Radioinduction
Comparison of radiological changes in humans and beagles with skeletal deposits of radium, 9: 10894 (J;GB)
SATELLITE POWER SYSTEM
See ORBITAL SOLAR POWER PLANTS
SATELLITE SOLAR POWER STATIONS
See ORBITAL SOLAR POWER PLANTS
SAVANNAH RIVER PLANT
Land Pollution
Critical pathways of radionuclides to man from agro-ecosystems. Annual progress report, October 1981-September 1982, 9: 10713 (R;US)
Radiation Monitoring
Savannah River Plant airborne emissions and controls, 9: 10683 (R;US)
Radioactive Effluents
Savannah River Plant airborne emissions and controls, 9: 10683 (R;US)
Radioactive Waste Storage
Prediction of centrifugal pump cleaning ability in waste sludge, 9: 9510 (J;US)
Remote Handling Equipment
Robotics at Savannah River, 9: 10403 (R;US)
Water Pollution
Onsite treatment of volatile organic compounds in groundwater, 9: 10739 (R;US)
SAVANNAH RIVER PLANT K REACTOR
See K REACTOR
SAVANNAH RIVER PLANT P REACTOR
See P REACTOR
SCANNERS (IMAGE)
See IMAGE SCANNERS
SCANNING (RADIOISOTOPE)
See RADIOISOTOPE SCANNING
SCATTERING
Asymptotic Solutions
Asymptotic behaviour of the scattering phase for non-trapping metrics, 9: 11113 (R;SU)
S Matrix
Asymptotic behaviour of the scattering phase for non-trapping metrics, 9: 11113 (R;SU)
SCHOOL BUILDINGS
Energy Conservation
Model industry initiated energy conservation program. Final report, 9: 10174 (R;US)
Policy implications of a successful energy conservation program in university buildings and dormitories, 9: 10022 (J;CH)
SCHROEDINGER EQUATION
Quantum Operators
Family of almost periodic Schroedinger operators, 9: 11175 (R;US)
SCHWINGER FUNCTIONAL EQUATIONS
Feynman Diagram
Diagram summation method by means of legendre transformation by a scalar parameter and its application to an anharmonic oscillator, 9: 11164 (R;SU)
SCINTILLATION CHAMBERS
See SCINTILLATION COUNTERS
SCINTILLATION COUNTERS
Maintenance
Use and maintenance of nuclear medicine instruments in Southeast Asia. Results of a survey conducted by the Medical Applications Section of the IAEA, 9: 10796 (R;XA)
SCINTILLATION DETECTORS
See SCINTILLATION COUNTERS

SCRAP METALS
Decontamination
Decontamination of transuranic contaminated metals by melt refining, 9: 9500 (J;US)
Materials Recovery
Energy savings by recovered materials use in the copper industry , 9: 10139 (R;US)
SCRUBBERS
Additives
Evaluation of sodium thiosulfate additive on the performance of a spray tower (train 100) scrubber system using limestone slurry, May 5, 1982-August 17, 1982. Final report, 9: 9269 (R;US)
Economic Analysis
Conceptual design and economics of an improved magnesium oxide flue gas desulfurization, 9: 9279 (BA;US)
Performance Testing
Argonne high sulfur dry scrubber, 9: 9265 (RA;US)
Testing
Evaluation of sodium thiosulfate additive on the performance of a spray tower (train 100) scrubber system using limestone slurry, May 5, 1982-August 17, 1982. Final report, 9: 9269 (R;US)
SEA BED
Sampling
Offshore in-situ testing techniques, 1983, 9: 9322 (R;US)
Soil Mechanics
Offshore in-situ testing techniques, 1983, 9: 9322 (R;US)
Testing
Offshore in-situ testing techniques, 1983, 9: 9322 (R;US)
SEAS
See also ATLANTIC OCEAN
MEDITERRANEAN SEA
PACIFIC OCEAN
Precambrian Era
Temporal and other factors affecting deposition of uraniferous conglomerates, 9: 9438 (RA;US)
Thermal Pollution
Environmental effects of cooling-water discharge into the ocean, 9: 10754 (R;NZ)
SEAWATER
Chemical Analysis
Some problems in the determination of total residual "chlorine" in chlorinated sea-water, 9: 10729 (J;GB)
Chlorination
The effect of temperature on the dissipation of chlorine in seawater, 9: 10732 (BA;US)
Photochemical Reactions
The effects of light on the dissipation of chlorine in sea-water, 9: 10728 (J;GB)
Redox Reactions
The oxidation state diagram--a potential tool for studying redox chemistry in seawater, 9: 10731 (J;NL)
SEAWEEDS
See also LAMINARIA
Aquaculture
Design of the biological/engineering experimental farm, 9: 9603 (RA;US)
Field biological studies, 9: 9606 (RA;US)
Marine biomass: New York State species and site studies. Annual report, December 1, 1981-November 30, 1982, 9: 9602 (R;US)
Cultivation Techniques
Design of the biological/engineering experimental farm, 9: 9603 (RA;US)
Plant Growth
Bio-engineering and materials testing, 9: 9604 (RA;US)
Field biological studies, 9: 9606 (RA;US)
Productivity
Greenhouse and laboratory experiments, 9: 9607 (RA;US)
Seeding and harvesting marine biomass, 9: 9608 (RA;US)
Tensile Properties
Bio-engineering and materials testing, 9: 9604 (RA;US)
SEBACIC ACID
Acute Exposure
Biological effects summary report di(2-ethylhexyl) sebacate, 9: 10916 (R;US)
Biological Effects
Biological effects summary report di(2-ethylhexyl) sebacate, 9: 10916 (R;US)
Carcinogenesis
Biological effects summary report di(2-ethylhexyl) sebacate, 9: 10916 (R;US)
Esters
Biological effects summary report di(2-ethylhexyl) sebacate, 9: 10916 (R;US)
Inhalation
Biological effects summary report di(2-ethylhexyl) sebacate, 9: 10916 (R;US)
Metabolism
Biological effects summary report di(2-ethylhexyl) sebacate, 9: 10916 (R;US)
Skin Effect
Biological effects summary report di(2-ethylhexyl) sebacate, 9: 10916 (R;US)
SECONDARY BATTERIES
See ELECTRIC BATTERIES
SECONDARY COOLANT CIRCUITS
Stress Corrosion
Stress-corrosion cracking in light-water reactors, 9: 9778 (J;US)
Water Chemistry
Stress-corrosion cracking in light-water reactors, 9: 9778 (J;US)
SEDIMENTS
Chemical Analysis
Polycyclic aromatic hydrocarbon (PAH)-phase associations in Washington coastal sediment, 9: 10745 (J;GB)
Compressibility
Consolidation properties and stress history of some deep sea sediments, 9: 10970 (R;US)
Polycyclic Aromatic Hydrocarbons
Polycyclic aromatic hydrocarbon (PAH)-phase associations in Washington coastal sediment, 9: 10745 (J;GB)
Radiation Monitoring
Experience with gamma spectrometry of water and sediment samples in preoperational radioactivity monitoring, 9: 10751 (RA;CS;In Czech)
Radionuclide Migration
Reversible ion-exchange fixation of cesium-137 leading to mobilization from reservoir sediments, 9: 10753 (J;GB)
Study of gamma-emitting radionuclides present in the sediments and algae of the "Baie de l'Orne" (Central Normandy Coast) collecting during the years 1980 - 1982, 9: 10752 (R;FR;In French)
Sampling
An evaluation of soil sampling for ^{137}Cs using various field-sampling volumes, 9: 10719 (J;GB)
Offshore in-situ testing techniques, 1983, 9: 9322 (R;US)
Soil Mechanics
Offshore in-situ testing techniques, 1983, 9: 9322 (R;US)
Stresses
Consolidation properties and stress history of some deep sea sediments, 9: 10970 (R;US)
Testing
Offshore in-situ testing techniques, 1983, 9: 9322 (R;US)
SEED RECOVERY
Research Programs
MHD heat and seed recovery technology project. Annual progress report, October 1981-September 1982, 9: 10046 (R;US)
SEISMIC ARRAYS
Performance
Canadian Seismic Agreement, 9: 10962 (R;US)
SEISMIC EFFECTS
Finite Element Method
Seismic model of the nuclear boiler SPX2, 9: 9884 (R;FR;In French)
Simulation
Experimental study on the vibrational characteristics of piping snubbers, 9: 9837 (RA;US)
SELENATES
Specific compounds should be indexed by coordination of a descriptor of the form (CATION) COMPOUNDS and the above anion descriptor.

Biological Effects
Effects of metal compounds on chromosome length, 9: 10924 (R;SE)
SELENIUM
Activation Analysis
Trace element analysis of biological materials: Complementarity of PIXE and NAA, 9: 10342 (J;US)
PIXE Analysis
PIXE and the mysteries of Legionnaires' disease, 9: 10824 (J;US)
Trace element analysis of biological materials: Complementarity of PIXE and NAA, 9: 10342 (J;US)
SELENIUM 75
Translocation
Root bioactivity of corn and sunflower as evaluated by ^{75}Se-plant injection technique, 9: 10791 (R;SE)
SEMICONDUCTOR COUNTERS
See SEMICONDUCTOR DETECTORS
SEMICONDUCTOR DETECTORS
See also CDTE SEMICONDUCTOR DETECTORS
GE SEMICONDUCTOR DETECTORS
HGI2 SEMICONDUCTOR DETECTORS
SI SEMICONDUCTOR DETECTORS
Accuracy
Determination of number of α-active nuclei in targets by means of a semiconductor $2\pi\alpha$-detector, 9: 10606 (RA;SU;In Russian)
SEMICONDUCTOR JUNCTIONS
Electrical Properties
Growth and characterization of single crystal (Cd, Zn)S thin films relevant to the study of the (Cd, Zn)S/Cu/sub x/S photovoltaic cell, 9: 9599 (R;US)
SEMICONDUCTOR MATERIALS
If possible index also the specific compounds.
Electron Microprobe Analysis
Microanalysis of candidate thin & thick film photovoltaic materials, 9: 9624 (J;US)
Microstructure
Microanalysis of candidate thin & thick film photovoltaic materials, 9: 9624 (J;US)
Physical Radiation Effects
Characteristic properties of kinetic phenomena in semiconductors with damage regions, 9: 11160 (RA;SU;In Russian)
Radiation defects in electron irradiated narrow gap semiconductors Hgsub(1-x)Cdsub(x)Te, 9: 10295 (RA;SU;In Russian)
Roughness
Microanalysis of candidate thin & thick film photovoltaic materials, 9: 9624 (J;US)
SEMILEPTONIC DECAY
T Invariance
Time reversal invariance in polarized neutron beta decay, 9: 11086 (R;US)
SENSIBLE HEAT STORAGE
Comparative Evaluations
Comparison of domestic olivine and European magnesite for electrically charged thermal energy storage, 9: 9952 (J;US)
SENSITIVITY ANALYSIS
Sensitivity analysis and model optimization for reaction-diffusion systems, 9: 10346 (R;US)
SERI
See SOLAR ENERGY RESEARCH INSTITUTE
SERINE
Membrane Transport
Characterization and isolation of a light driven sodium pump from membranes of Halobacterium halobium. Final technical progress report, 9: 10767 (R;US)
SERUM (BLOOD)
See BLOOD SERUM
SEWAGE SLUDGE
Activation Analysis
Instrumental activation analysis of sludge specimens, 9: 10318 (RA;CS;In Czech)
Environmental Effects
Hydrologic effects of storing liquified sewage sludge on strip-mined land, Fulton County, Illinois, 9: 10744 (R;US)
Waste Storage
Hydrologic effects of storing liquified sewage sludge on strip-mined land, Fulton County, Illinois, 9: 10744 (R;US)
SHAFT EXCAVATIONS
Evaluation
Plans for characterization of salt sites, 9: 9468 (R;US)
SHALE GAS
Production
Infill drilling for shale gas development: A field case study, 9: 9416 (J;US)
SHALES
Classification
Visual classification of very fine-grained sediments: evaluation through univariate and multivariate statistics, 9: 10959 (J;US)
Lithology
Visual classification of very fine-grained sediments: evaluation through univariate and multivariate statistics, 9: 10959 (J;US)
SHEARON HARRIS-1 REACTOR
See HARRIS-1 REACTOR
SHEARON HARRIS-2 REACTOR
See HARRIS-2 REACTOR
SHEATHS (FUEL)
See FUEL CANS
SHEEP
Biological Radiation Effects
Chronic gamma irradiation and hypothalamo-pituitary system in sheep, 9: 10876 (RA;CS;In Slovak)
Trypsin inhibitory activity in blood and cervical mucus of sheep following chronic gamma irradiation, 9: 10877 (RA;CS;In Slovak)
Chronic Irradiation
Chronic gamma irradiation and hypothalamo-pituitary system in sheep, 9: 10876 (RA;CS;In Slovak)
Lethal Irradiation
Morphological changes in organs of sheep perished following irradiation, 9: 10878 (RA;CS;In Slovak)
SHELLS
Structural forms; for electron shells in atoms use ELECTRONIC STRUCTURE.
Deformation
Influence of geometrical imperfections on the buckling loads and vibrations of fluid structure systems, 9: 9834 (R;FR)
SHF RADIATION
See RADIOWAVE RADIATION
SHIELDING
Computer Calculations
Requirement of nuclear data and inaccuracy of nuclear data in evaluating the target values of shielding calculations for the light water reactor and the high-temperature reactor, 9: 9779 (B;DE;In German)
Design
Shielding considerations for multi-GeV/nucleon heavy ion accelerators: the introduction of a new heavy ion transport code, HIT, 9: 10517 (R;US)
Neutron Transport
Neutron streaming through diagnostic penetrations in a fusion reactor shield, 9: 11291 (R;US)
SHIPS
Drag
Numerical simulations of compliant material response to turbulent flow, 9: 10431 (R;US)
Fuel Cells
Fuel cell propulsion systems for large vehicles: buses, freight locomotives, and marinecraft, 9: 10052 (J;US)
SHOCK ABSORBERS
Dynamic Loads
Experimental study on the vibrational characteristics of piping snubbers, 9: 9837 (RA;US)
SHOCK WAVES
Pattern Recognition
Pattern formation by shock processes, 9: 11046 (R;US)
SHOWER COUNTERS
Detects high energy gamma radiation or high energy particles on basis of cascade showers in layered absorbers.

Calibration
Energy calibration of a multilayer photon detector, 9: 10569 (R;US)

SHRUBS
Plant Growth
Production of nonconventional crops for methane feedstocks (Saw palmetto, castorbean, dogfennel, sida, pigweed, saltbush), 9: 9622 (BA;US)
Productivity
Production of nonconventional crops for methane feedstocks (Saw palmetto, castorbean, dogfennel, sida, pigweed, saltbush), 9: 9622 (BA;US)

SHUTDOWN (REACTOR)
See REACTOR SHUTDOWN

SI SEMICONDUCTOR DETECTORS
Performance
Multicomponent telescope based on p-Si for spectrometry and identification of the charged medium energy particles, 9: 10604 (RA;SU;In Russian)
Sensitivity
Specifications of silicon semiconductor detectors for isotopic composition study, 9: 10596 (RA;SU;In Russian)

SIALON
See ALUMINIUM OXIDES
SILICON NITRIDES

SILANES
Comparative Evaluations
Disilane versus monosilane: a comparison of the properties of glow-discharge a-Si:H Films and solar cells, 9: 9627 (J;US)
Deposition
Disilane versus monosilane: a comparison of the properties of glow-discharge a-Si:H Films and solar cells, 9: 9627 (J;US)
Use of optical emission spectroscopy as a diagnostic technique for plasma deposition of hydrogenated amorphous silicon and carbon, 9: 10289 (R;US)

SILICA
Activation Analysis
Use of MTA 1527-2000 automatic activation analyzer in determining SiO_2 and Al_2O_3 in kaolin and clay samples, 9: 10328 (RA;CS;In Czech)
Catalytic Effects
Promotion effects on the synthesis of higher alcohols. Fifth quarterly report, September 1983-November 1983, 9: 9547 (R;US)

SILICATE MINERALS
See also FAUJASITE
KAOLINITE
OLIVINE
SMECTITE
Comparative Evaluations
Evaluation of phyllosilicates as a buffer component in the disposal of nuclear fuel waste, 9: 9456 (R;CA)

SILICON
Activation Analysis
14 MeV neutron activation analysis of geological and lunar samples, 9: 10345 (J;US)
Activation analysis of soils using 14 MeV neutrons, 9: 10329 (RA;CS;In Slovak)
Trace element analysis of biological materials: Complementarity of PIXE and NAA, 9: 10342 (J;US)
Casting
Directional solidification of silicon in carbon crucibles by an oscillating crucible technique, 9: 9629 (J;US)
Charge Carriers
The measurement of variations in minority carrier lifetime due to microstructural defects in large area polysilicon wafers, 9: 9644 (J;US)
Chemical Reaction Kinetics
Phase equilibria and kinetics in the solid state reaction between silicon and NiCrAl, 9: 10251 (J;US)
Comparative Evaluations
Interaction between cast silicon properties and solar cell performance, 9: 9630 (J;US)
Creep
Stress studies in EFG. Quarterly progress report, July 1, 1983-September 30, 1983, 9: 9598 (R;US)
Crucibles
Directional solidification of silicon in carbon crucibles by an oscillating crucible technique, 9: 9629 (J;US)
Crystal Defects
The measurement of variations in minority carrier lifetime due to microstructural defects in large area polysilicon wafers, 9: 9644 (J;US)
Crystal Growth
Impurities in polycrystalline silicon solar cells, 9: 9639 (J;US)
Stress studies in EFG. Quarterly progress report, July 1, 1983-September 30, 1983, 9: 9598 (R;US)
Crystal Growth Methods
Directional solidification of silicon in carbon crucibles by an oscillating crucible technique, 9: 9629 (J;US)
Flat-plate solar array progress and plans, 9: 9632 (J;US)
Interaction between cast silicon properties and solar cell performance, 9: 9630 (J;US)
Silicon sheet technologies, 9: 10307 (J;US)
Crystal Structure
Interaction between cast silicon properties and solar cell performance, 9: 9630 (J;US)
Second-harmonic reflection from silicon surfaces and its relation to structural symmetry, 9: 10300 (J;US)
Crystallization
Advances in semicrystalline silicon solar cells, 9: 9654 (J;US)
Deposition
Use of optical emission spectroscopy as a diagnostic technique for plasma deposition of hydrogenated amorphous silicon and carbon, 9: 10289 (R;US)
Dislocations
Interaction between cast silicon properties and solar cell performance, 9: 9630 (J;US)
Electrical Properties
Studies of grain boundaries in small-grained polycrystalline silicon solar cells, 9: 9640 (J;US)
Electrorefining
Silicon electrorefining using a semipermeable Cu_3Si:Si anode, 9: 9634 (J;US)
Energy Levels
Impurities in polycrystalline silicon solar cells, 9: 9639 (J;US)
Etching
The measurement of variations in minority carrier lifetime due to microstructural defects in large area polysilicon wafers, 9: 9644 (J;US)
Grain Boundaries
Impurities in polycrystalline silicon solar cells, 9: 9639 (J;US)
Studies of grain boundaries in small-grained polycrystalline silicon solar cells, 9: 9640 (J;US)
Grain Size
Studies of grain boundaries in small-grained polycrystalline silicon solar cells, 9: 9640 (J;US)
Impurities
Impurities in polycrystalline silicon solar cells, 9: 9639 (J;US)
Silicon electrorefining using a semipermeable Cu_3Si:Si anode, 9: 9634 (J;US)
The measurement of variations in minority carrier lifetime due to microstructural defects in large area polysilicon wafers, 9: 9644 (J;US)
LASS Growth Method
Progress in growth of silicon ribbon by a low angle, high rate process, 9: 9631 (J;US)
Phase Diagrams
Phase equilibria and kinetics in the solid state reaction between silicon and NiCrAl, 9: 10251 (J;US)
PIXE Analysis
Trace element analysis of biological materials: Complementarity of PIXE and NAA, 9: 10342 (J;US)
Production
Progress in growth of silicon ribbon by a low angle, high rate process, 9: 9631 (J;US)
Quality Assurance
Silicon electrorefining using a semipermeable Cu_3Si:Si anode, 9: 9634 (J;US)
Self-Diffusion
Nuclear solid state physics and technology, 9: 11147 (RA;DE;In German)

Solidification
Directional solidification of silicon in carbon crucibles by an oscillating crucible technique, 9: 9629 (J;US)
Solubility
The effects of surface area to solution volume on waste glass leaching, 9: 9494 (J;US)
Spectral Response
Interaction between cast silicon properties and solar cell performance, 9: 9630 (J;US)
Stirring
Directional solidification of silicon in carbon crucibles by an oscillating crucible technique, 9: 9629 (J;US)
Stress Analysis
Stress studies in EFG. Quarterly progress report, July 1, 1983-September 30, 1983, 9: 9598 (R;US)
Surface Area
The measurement of variations in minority carrier lifetime due to microstructural defects in large area polysilicon wafers, 9: 9644 (J;US)

SILICON 28 REACTIONS
Compound-Nucleus Reactions
Observation of rigid nuclear rotation, 9: 11125 (J;US)

SILICON 29 REACTIONS
Compound-Nucleus Reactions
Observation of rigid nuclear rotation, 9: 11125 (J;US)

SILICON ALLOYS
See also ALLOY-RA-333
Fabrication
U-Si and U-Si-Al dispersion, fuel alloy development for research and test reactors, 9: 9444 (J;US)
Testing
U-Si and U-Si-Al dispersion, fuel alloy development for research and test reactors, 9: 9444 (J;US)

SILICON CARBIDES
Chemical Vapor Deposition
Raman spectral characterization of silicon carbide nuclear fuel coatings, 9: 10277 (J;US)
Crystal Growth
Development of the VLS process for SiC whisker growth, 9: 10271 (R;US)
Hot Pressing
Silicon carbide Pt. 3. Hot-pressed silicon carbide as construction material, 9: 10281 (B;DE;In German)
Physical Radiation Effects
Raman spectral characterization of silicon carbide nuclear fuel coatings, 9: 10277 (J;US)
Structural effects in neutron-irradiated low-activation ceramics, 9: 10268 (RA;US)
Raman Spectra
Raman spectral characterization of silicon carbide nuclear fuel coatings, 9: 10277 (J;US)
Swelling
Structural effects in neutron-irradiated low-activation ceramics, 9: 10268 (RA;US)

SILICON HYDRIDES
See SILANES

SILICON NITRIDES
Physical Radiation Effects
Structural effects in neutron-irradiated low-activation ceramics, 9: 10268 (RA;US)
Swelling
Structural effects in neutron-irradiated low-activation ceramics, 9: 10268 (RA;US)

SILICON OXIDES
See also QUARTZ
SILICA
Dissolution
Dissolution studies of $CsAlSi_5O_{12}$, 9: 10280 (J;US)
Fabrication
Fabrication of lithium ceramics by hot pressing, 9: 10266 (RA;US)
Heating
Sustained UO_2 melts using the inductive ring susceptor technique, 9: 10278 (J;US)
Melting
Sustained UO_2 melts using the inductive ring susceptor technique, 9: 10278 (J;US)
Specific Heat
Solid breeder thermal properties, 9: 10221 (RA;US)
Thermal Expansion
Solid breeder thermal properties, 9: 10221 (RA;US)
Thermodynamic Properties
Solid breeder thermal properties, 9: 10221 (RA;US)

SILICON SEMICONDUCTOR DETECTORS
See SI SEMICONDUCTOR DETECTORS

SILICON SOLAR CELLS
Annealing
Improved beam processing for terrestrial solar cells, 9: 9655 (J;US)
Intrinsic gettering in EFG ribbons by pre-diffusion anneal at high temperatures. Quarterly report, July 1, 1983-September 31, 1983, 9: 9597 (R;US)
Background Radiation
Improved beam processing for terrestrial solar cells, 9: 9655 (J;US)
Commercialization
Amorphous silicon materials and solar cells: progress and directions, 9: 9626 (J;US)
Crystallization
Advances in semicrystalline silicon solar cells, 9: 9654 (J;US)
Depletion Layer
Diffusion length and collection width for the evaluation of a-Si, 9: 9652 (J;US)
Design
The V-Groove silicon solar cell, 9: 9646 (J;US)
Diffusion Length
Diffusion length and collection width for the evaluation of a-Si, 9: 9652 (J;US)
Efficiency
High efficiency silicon solar cells, 9: 9637 (J;US)
The V-Groove silicon solar cell, 9: 9646 (J;US)
Electric Contacts
Optimization of transparent electrode for solar cell and chemical vapor deposition of amorphous silicon. Final technical report, 15 September 1980-30 March 1983, 9: 9612 (R;US)
Electric Potential
High efficiency silicon solar cells, 9: 9637 (J;US)
Electrolytes
Development and evaluation of the Texas instruments solar energy system, 9: 9635 (J;US)
Energy Losses
The V-Groove silicon solar cell, 9: 9646 (J;US)
Epitaxy
The growth and characterization of epitaxial solar cells on re-solidified metallurgical grade silicon, 9: 9617 (J;US)
Evaluation
Diffusion length and collection width for the evaluation of a-Si, 9: 9652 (J;US)
Fabrication
Advances in semicrystalline silicon solar cells, 9: 9654 (J;US)
Directional solidification of silicon in carbon crucibles by an oscillating crucible technique, 9: 9629 (J;US)
Interaction between cast silicon properties and solar cell performance, 9: 9630 (J;US)
Gettering
Intrinsic gettering in EFG ribbons by pre-diffusion anneal at high temperatures. Quarterly report, July 1, 1983-September 31, 1983, 9: 9597 (R;US)
Insolation
High efficiency silicon solar cells, 9: 9637 (J;US)
Ion Implantation
Improved beam processing for terrestrial solar cells, 9: 9655 (J;US)
Performance
Advances in semicrystalline silicon solar cells, 9: 9654 (J;US)
High efficiency silicon solar cells, 9: 9637 (J;US)
Impurities in polycrystalline silicon solar cells, 9: 9639 (J;US)
Studies of grain boundaries in small-grained polycrystalline silicon solar cells, 9: 9640 (J;US)
The measurement of variations in minority carrier lifetime due to microstructural defects in large area polysilicon wafers, 9: 9644 (J;US)

Performance Testing
Directional solidification of silicon in carbon crucibles by an oscillating crucible technique, 9: 9629 (J;US)
Flat-plate solar array progress and plans, 9: 9632 (J;US)
Interaction between cast silicon properties and solar cell performance, 9: 9630 (J;US)
Photovoltaic Conversion
Attainment of 10% conversion efficiency in amorphous silicon solar cells, 9: 9653 (J;US)
Quantum Efficiency
Attainment of 10% conversion efficiency in amorphous silicon solar cells, 9: 9653 (J;US)
Directional solidification of silicon in carbon crucibles by an oscillating crucible technique, 9: 9629 (J;US)
Disilane versus monosilane: a comparison of the properties of glow-discharge a-Si:H Films and solar cells, 9: 9627 (J;US)
Interaction between cast silicon properties and solar cell performance, 9: 9630 (J;US)
Progress in growth of silicon ribbon by a low angle, high rate process, 9: 9631 (J;US)
Research Programs
Amorphous silicon materials and solar cells: progress and directions, 9: 9626 (J;US)
Research on polycrystalline silicon solar cells: goals and accomplishments, 9: 9633 (J;US)
Silicon
Interaction between cast silicon properties and solar cell performance, 9: 9630 (J;US)
Technology Assessment
Amorphous silicon materials and solar cells: progress and directions, 9: 9626 (J;US)
High efficiency silicon solar cells, 9: 9637 (J;US)
Research on polycrystalline silicon solar cells: goals and accomplishments, 9: 9633 (J;US)
V Trough Collectors
The V-Groove silicon solar cell, 9: 9646 (J;US)

SILVER
Activation Analysis
Semiconductor nuclear emission detector using at gamma activation analysis of the environmental objects, 9: 10597 (RA;SU;In Russian)
Consumption Rates
Battery-related wastes in the UK (United Kingdom) and their disposal, 9: 10146 (R;US)
Inner-Shell Ionization
K-shell ionization by low-velocity ions, 9: 11024 (J;US)
K-shell ionization cross section for Ti, Fe, Cu, Zr, and Ag, 9: 11033 (J;US)
Ion-Atom Collisions
K-shell ionization by low-velocity ions, 9: 11024 (J;US)
K-shell ionization cross section for Ti, Fe, Cu, Zr, and Ag, 9: 11033 (J;US)
K-vacancy production in heavy-ion-atom collisions at small impact parameters, 9: 11015 (J;US)
Materials Recovery
Battery-related wastes in the UK (United Kingdom) and their disposal, 9: 10146 (R;US)

SIMS
See MASS SPECTROSCOPY

SITES (REACTOR)
See REACTOR SITES

SKELETAL FOSSILS
See FOSSILS

SKELETON
See also BONE JOINTS
FEMUR
Biological Radiation Effects
Comparison of radiological changes in humans and beagles with skeletal deposits of radium, 9: 10894 (J;GB)
Delayed Radiation Effects
Dose-response relationships for bone cancers from plutonium in dogs and people, 9: 10900 (J;GB)
Fibrosarcomas
Fibrosarcoma of bone. A clinical-radiological investigation, 9: 10800 (R;NL;In Dutch)
Radiation Doses
Measured ^{234,238}U and fallout ^{239,240}Pu in human bone ash from Nepal and Australia: skeletal alpha dose, 9: 10898 (J;GB)
Radionuclide Kinetics
Bioassay model for estimating body burdens of ^{241}Am from excretion analyses, 9: 10905 (J;GB)
Measurement techniques for radium and the actinides in man at the Center for Human Radiobiology, 9: 10901 (J;GB)
Skeletal retention and distribution of ^{226}Ra and ^{239}Pu in beagles injected at ages ranging from 2 days to 5 years, 9: 10906 (J;GB)

SLAGS
Deposition
Slagging behavior of coal ash in an experimental furnace, 9: 9306 (BA;US)

SLOT OVENS
See COKE OVENS

SLURRIES
See also FUEL SLURRIES
Freezing
Fundamental investigations to analyse the strength parameters in the mining method with freezing stowing, 9: 10470 (R;DE;In German)
Water Removal
High moisture slurry tailings - final report, 9: 9992 (R;US)

SLURRIES (FUEL)
See FUEL SLURRIES

SMALL-SCALE HYDROELECTRIC POWER PLANTS
Renewable energy resource planning in Orange County: a summary of procedures used for renewable assessment. Piedmont Cresent Energy Project, 9: 10044 (R;US)
Feasibility Studies
Brief reconnaissance study for the addition of hydropower for Western Carolina University Dam, Cullowhee, North Carolina, 9: 9571 (R;US)
Brief reconnaissance study for the addition of hydropower for Moss Bluff Lock and Spillway, Moss Bluff, Florida, 9: 9576 (R;US)
Brief reconnaissance study for the addition of hydropower for Downings Mill Dam, Choccolocco, Alabama, 9: 9577 (R;US)
Brief reconnaissance study for the addition of hydropower for Henry River Dam, Morganton, North Carolina, 9: 9574 (R;US)
Brief reconnaissance study for the addition of hydropower for Ward Dam, Sugar Grove, North Carolina, 9: 9572 (R;US)
Brief reconnaissance study for the addition of hydropower for Randolph Mills No. 2 Dam, Franklinville, North Carolina, 9: 9569 (R;US)
Brief reconnaissance study for the addition of hydropower for Fairfield Lake Dam, Sapphire, North Carolina, 9: 9570 (R;US)
Brief reconnaissance study for the addition of hydropower for Lake Manatee Dam, Bradenton, Florida, 9: 9566 (R;US)
Brief reconnaissance study for the addition of hydropower for Randolph Mills No. 1 Dam, Franklinville, North Carolina, 9: 9568 (R;US)
Brief reconnaissance study for the addition of hydropower for Geiger Lake Dam, Hattiesburg, Mississippi, 9: 9567 (R;US)
Brief reconnaissance studies for the addition of hydropower in Puerto Rico. Report No. 2, 9: 9573 (R;US)
Brief reconnaissance study for the addition of hydropower for Banner Elk Dam, Banner Elk, North Carolina, 9: 9562 (R;US)
Brief reconnaissance study for the addition of hydropower for Cecil Murray Dam, Ennice, North Carolina, 9: 9563 (R;US)
Brief reconnaissance study for the addition of hydropower for Tate Dam, Boone, North Carolina, 9: 9575 (R;US)
Brief reconnaissance study for the addition of hydropower for Percy Quin Dam, McComb, Mississippi, 9: 9579 (R;US)

SMECTITE
Crystallization
Studies of altered vitrophyre for the prediction of nuclear waste repository - induced thermal alteration at Yucca Mountain, Nevada, 9: 9481 (R;US)

SMELTERS
Environmental Effects
Chemistry and visual impact of the plumes from the Four Corners Power Plant and San Manuel Copper smelter. Interim report 4 Apr 79-14 Jan 82, 9: 10669 (R;US)
SMES
See SUPERCONDUCTING MAGNETIC ENERGY STORAGE
SMOKES
Sampling
National survey of smoke and sulphur dioxide - quality control tests on the analysis of samples, 9: 10664 (R;US)
SNG PLANTS
Economic Analysis
Economics of producing substitute natural gas from coal, 9: 9315 (BA;US)
Pilot Plants
Methane from synthesis gas, 9: 9253 (BA;US)
SNG PROCESSES
See also FLUIDIZED BED HYDROGENATION PROCESS
HYGAS PROCESS
Scale Models
Use of modelling techniques in SNG process development (Catalytic rich gas process, gas recycle and fluidized bed hydrogenators and slagging gasifier), 9: 9242 (BA;US)
SODIUM
Membrane Transport
Characterization and isolation of a light driven sodium pump from membranes of Halobacterium halobium. Final technical progress report, 9: 10767 (R;US)
PIXE Analysis
Large scale study of tooth enamel, 9: 10343 (J;US)
Solubility
Incorporation of radionuclides in crystalline titanates, 9: 9511 (J;US)
SODIUM CHLORIDES
Electric Currents
Thermally stimulated thermoelectrical and thermomagnetic currents in dielectrics, 9: 10296 (RA;SU;In Russian)
SODIUM COMPLEXES
Nuclear Magnetic Resonance
Enhanced nuclear magnetic resonance in a non-magnetic cubic doublet. A study performed with a ^{4}He-circulating dilution refrigerator, 9: 10234 (R;NL)
SODIUM IODIDE DETECTORS
See NAI DETECTORS
SODIUM IONS
Ion Sources
Source for unpolarized sodium ions (SUSI) at the MP tandem, 9: 10511 (RA;DE;In German)
Polarized Beams
Source for polarized heavy ions (PSI) at the MP tandem, 9: 10510 (RA;DE;In German)
SODIUM-SULFUR BATTERIES
Performance Testing
Status of the Ford Aerospace sodium-sulfur battery program, 9: 9964 (J;US)
SOIL CHEMISTRY
Bench-Scale Experiments
Modified soxhlet extractor for pedologic studies, 9: 10704 (J;US)
SOILING
See SURFACE CONTAMINATION
SOILS
Acidification
Acidifying and basic effects of nitrogen fertilizers on forest soil, 9: 9615 (R;SE;In Swedish)
Activation Analysis
Activation analysis of soils using 14 MeV neutrons, 9: 10329 (RA;CS;In Slovak)
Heat Extraction
Extracting heat from and storing heat in ground and water. Method of inventory and statement of natural conditions, 9: 9948 (R;SE;In Swedish)
Heat Storage
Extracting heat from and storing heat in ground and water. Legal aspects, 9: 9949 (R;SE;In Swedish)
Radionuclide Migration
Critical pathways of radionuclides to man from agro-ecosystems. Annual progress report, October 1981-September 1982, 9: 10713 (R;US)
Groundwater monitoring in the Savannah River Plant low-level waste burial ground: a summary and interpretation of the analytical data, 9: 9514 (R;US)
Radionuclide transport processes in terrestrial ecosystems, 9: 10720 (J;US)
Utilization of radioactive contaminated arable land and pasture in dependence of time, 9: 10711 (RA;AT;In German)
Sampling
An evaluation of soil sampling for ^{137}Cs using various field-sampling volumes, 9: 10719 (J;GB)
Weathering
Modified soxhlet extractor for pedologic studies, 9: 10704 (J;US)
SOLAR ARCHITECTURE
Computer Codes
Microcomputer methods for solar design and analysis: passive and active systems, 9: 9582 (R;US)
Reviews
Solar energy almanac, 9: 9717 (B;US)
SOLAR BATTERIES
See SOLAR CELL ARRAYS
SOLAR CELL ARRAYS

SORBENT RECOVERY SYSTEMS
Performance
Clearance of oil from water surfaces: the oil mop recovery device, 9: 9348 (R;US)
Evaluation trials on equipment manufactured by OMI Ltd., Tonbridge, Kent. the oil mop II-9DP, 9: 9352 (R;US)

SOUTH ATLANTIC BIGHT
Phytoplankton
Biological processes in the water column of the South Atlantic Bight. Progress report, June 1982-June 1984, 9: 10726 (R;US)

Research Programs
Trace element geochemistry of the South Atlantic Bight. Progress report, 9: 10737 (R;US)
Zooplankton
Biological processes in the water column of the South Atlantic Bight. Progress report, June 1982-June 1984, 9: 10726 (R;US)
SOUTH CAROLINA
Geochemical Surveys
Results of NURE detailed sampling in the Aiken County, South Carolina area. National Uranium Resource Evaluation program, 9: 9443 (R;US)
Stratigraphy
Results of NURE detailed sampling in the Aiken County, South Carolina area. National Uranium Resource Evaluation program, 9: 9443 (R;US)
SOYBEAN PLANT
See GLYCINE HISPIDA
SOYBEANS
Radionuclide Migration
Critical pathways of radionuclides to man from agro-ecosystems. Annual progress report, October 1981-September 1982, 9: 10713 (R;US)
SPACE HVAC SYSTEMS
Heating, ventilation, and air conditioning systems.
Energy Conservation
Analysis of conservation and renewable options for new single-family residences, 9: 10085 (J;US)
Performance
Development of equipment seasonal performance models for simplified energy analysis methods, 9: 10123 (J;US)
SPACE POWER REACTORS
Heat Pipes
Performance demonstration of a high-power space reactor heat pipe design, 9: 9871 (J;US)
Shielding
Space reactor shielding: an assessment of the technology, 9: 9823 (R;US)
SPACE SHUTTLES
Remote Viewing Equipment
Advanced thermal sensor system development via shuttle sortie missions, 9: 9998 (BA;US)
SPACE VEHICLES

Nuclear Power Plants
Comparison of evolving photovoltaic and nuclear power systems for Earth orbital applications, 9: 9660 (J;US)
Orbital Solar Power Plants
Comparison of evolving photovoltaic and nuclear power systems for Earth orbital applications, 9: 9660 (J;US)
Photovoltaic Power Plants
Comparison of evolving photovoltaic and nuclear power systems for Earth orbital applications, 9: 9660 (J;US)
SPACE-TIME
Metrics
Proper time, spatial distances and clock synchronization in the locally anisotropic space-time, 9: 11174 (R;SU)
SPARK CHAMBERS
See also WIDE GAP SPARK CHAMBERS
Calibration
Calibration of the IHEP neutrino detector spark calorimeter in the electron beam at the energy of 1-8 GeV, 9: 10583 (R;SU;In Russian)
SPARK IGNITION ENGINES
Knock Control
Influence of gas composition on the knocking behaviour of spark-ignited gas engines, 9: 10181 (BA;US)
SPEAR
Stanford positron-electron asymmetric ring.
Supports
SLAC SPEAR beam line modules 1 through 18 (Engineering Materials), 9: 10561 (E;US)
SPECIAL RELATIVITY THEORY
See RELATIVITY THEORY
SPECTRA (NEUTRON)
See NEUTRON SPECTRA
SPECTRALLY SELECTIVE SURFACES
Emissivity
Total hemispherical emittance measurement apparatus for solar selective coatings, 9: 9722 (R;US)
SPENT FUEL CASKS
Evaluation
Extended Fuel Burnup Demonstration Program. Transport considerations for transnuclear casks, 9: 10402 (R;US)
SPENT FUEL ELEMENTS
Leaching
Spent fuel cladding containment credit test, 9: 9478 (R;US)
Neutron Radiography
Operation of a neutron radiography facility using nitrocellulose films as solid track detectors, 9: 9842 (R;FR;In French)
SPENT FUEL STORAGE
See also MONITORED RETRIEVABLE STORAGE
Fourth annual report of the Canadian Nuclear Fuel Waste Management Program, 9: 9455 (R;CA)
Implementation
Initial implementation plan for deployment of federal interim storage facilities for commercial spent nuclear fuel, 9: 9451 (R;US)
SPENT FUELS
Reactivity
Oscillator measurements of the reactivity changes resulting from the irradiation of low enrichment particulate fuel in the Dragon reactor, 9: 9863 (R;GB)
Transport
Fourth annual report of the Canadian Nuclear Fuel Waste Management Program, 9: 9455 (R;CA)
Transport of FBR spent fuels, 9: 9449 (R;FR;In French)
Transportation of radioactive material (RAM) to and from US nuclear power plants. Draft environmental assessment, 9: 9452 (R;US)
SPERM
See SPERMATOZOA
SPERMATIDS
See SPERMATOZOA
SPERMATOCYTES
Meiosis
Synaptonemal complex analysis of X-7 translocations in male mice, 9: 10786 (J;DE)
Strand Breaks
Synaptonemal complex analysis of X-7 translocations in male mice, 9: 10786 (J;DE)
SPERMATOGONIA
Mutations
Genetic effects of 1,2-dibromo-3-chloropropane (DBCP) in Drosophila, 9: 10945 (J;US)
Sensitivity of Drosophila melanogaster to low concentrations of gaseous mutagens. IV. Mutations in embryonic spermatogonia, 9: 10937 (J;NL)
SPERMATOZOA
Chromosomal Aberrations
DNA target sites associated with chemical induction of dominant-lethal mutations and heritable translocations in mice, 9: 10917 (R;US)
SPHENE
See TITANITE
SPHEROMAK DEVICES
Magnetic Field Configurations
Magnetic field topologies of the relaxed states of turbulent discharges, 9: 11316 (R;US)
Reviews
Reconnection in Spheromak formation and sustainment, 9: 11341 (R;US)
SPIN GLASS STATE
Symmetry Breaking
Broken symmetry in the mean field theory of the ising spin glass: replica way and no replica way, 9: 11159 (R;FR)
SPINACH
Temperature Effects
Picosecond fluorescence kinetics in spinach chloroplasts at low temperature, 9: 10915 (J;GB)

SPINELS
Physical Radiation Effects
Structural effects in neutron-irradiated low-activation ceramics, 9: 10268 (RA;US)
Swelling
Structural effects in neutron-irradiated low-activation ceramics, 9: 10268 (RA;US)
SPLEEN
Autoradiography
Autoradiographically determined androgen localization in immunity organs of mice following irradiation, 9: 10873 (RA;CS;In Czech)
Stem Cells
Relationship between number of spleen colonies and ^{125}IdUrd incorporation into spleen and femur, 9: 10893 (J;US)
SPR-4 REACTOR
Reviews
Sandia Pulse Reactor-IV Project, 9: 9868 (R;US)
SRC PROCESS
Pilot Plants
Wilsonville advanced coal liquefaction research and development facility, Wilsonville, Alabama. Topical report No. 7. Operation and maintenance, 1982 (Operation, equipment failures, shutdowns, maintenance, etc.), 9: 9231 (R;US)
SRC-II PROCESS
Coal Liquids
Chemical and biological effects of heavy distillate recycle in the SRC-II process, 9: 9238 (R;US)
Flowsheets
Chemical and biological effects of heavy distillate recycle in the SRC-II process, 9: 9238 (R;US)
Pilot Plants
Wilsonville advanced coal liquefaction research and development facility, Wilsonville, Alabama. Topical report No. 7. Operation and maintenance, 1982 (Operation, equipment failures, shutdowns, maintenance, etc.), 9: 9231 (R;US)
STAINLESS STEEL-304
Corrosion
Critical study of materials for synthetic gas quench systems, 9: 9243 (BA;US)
Fatigue
Study and modeling of high temperature fatigue crack propagation in austenitic stainless steel. Final report, September 1, 1979-November 30, 1983, 9: 10223 (R;US)
Microstructure
Dependence on displacement rate of radiation-induced changes in microstructure and tensile properties of AISI 304 and 316, 9: 10232 (R;US)
Tensile Properties
Dependence on displacement rate of radiation-induced changes in microstructure and tensile properties of AISI 304 and 316, 9: 10232 (R;US)
STAINLESS STEEL-304L
Corrosion
Corrosion test plan to guide canister material selection and design for a tuff repository, 9: 10246 (R;US)
Stress Corrosion
Depassivation and repassivation of austenitic stainless steels. Consequences on stress corrosion cracking (SS 304L and 309L), 9: 10218 (R;FR)
STAINLESS STEEL-309
Chemical Composition
Materials performance at high temperatures and pressures in simulated coal gasification atmospheres, 9: 9245 (BA;US)
Corrosion
Materials performance at high temperatures and pressures in simulated coal gasification atmospheres, 9: 9245 (BA;US)
Stress Corrosion
Depassivation and repassivation of austenitic stainless steels. Consequences on stress corrosion cracking (SS 304L and 309L), 9: 10218 (R;FR)
STAINLESS STEEL-310
Chemical Composition
Materials performance at high temperatures and pressures in simulated coal gasification atmospheres, 9: 9245 (BA;US)
Materials performance in coal gasification environments, 9: 9246 (BA;US)
Corrosion
Erosion-corrosion of structural materials in a simulated coal gasification environment, 9: 9244 (BA;US)
Materials performance at high temperatures and pressures in simulated coal gasification atmospheres, 9: 9245 (BA;US)
Materials performance in coal gasification environments, 9: 9246 (BA;US)
Microstructural study of failure mechanisms during mechanical testing in coal gasification environments. Final report Mar 1980-Mar 1982, 9: 9237 (R;US)
Erosion
Analysis of a failed separation cyclone from the Dow Chemical Corporation slagging coal gasification plant, 9: 9220 (R;US)
Materials Testing
Microstructural study of failure mechanisms during mechanical testing in coal gasification environments. Final report Mar 1980-Mar 1982, 9: 9237 (R;US)
Mechanical Properties
Microstructural study of failure mechanisms during mechanical testing in coal gasification environments. Final report Mar 1980-Mar 1982, 9: 9237 (R;US)
Oxidation
Analysis of a failed separation cyclone from the Dow Chemical Corporation slagging coal gasification plant, 9: 9220 (R;US)
STAINLESS STEEL-316
Creep
Creep embrittlement of austenitic stainless steels with titanium addition, 9: 10208 (R;FR)
Embrittlement
Creep embrittlement of austenitic stainless steels with titanium addition, 9: 10208 (R;FR)
Microstructure
Dependence on displacement rate of radiation-induced changes in microstructure and tensile properties of AISI 304 and 316, 9: 10232 (R;US)
Microstructure evolution of stainless steel 316 irradiated by neutrons, 9: 10212 (R;FR;In French)
Physical Radiation Effects
Influence of various stresses on diametral and axial plastic deformations of the Phenix reactor fuel cans, 9: 9813 (R;FR;In French)
Microstructure evolution of stainless steel 316 irradiated by neutrons, 9: 10212 (R;FR;In French)
Properties and mechanical behaviour of fuel cans of fast neutron reactors (SS 316), 9: 10213 (R;FR;In French)
Study of swelling by simulation (alloys especially SS 316), 9: 10214 (R;FR;In French)
Swelling of structural materials in fast neutron reactors (SS 316), 9: 10211 (R;FR;In French)
Transport of carbon in 316 steels submitted to neutron irradiation, 9: 10209 (R;FR;In French)
Tensile Properties
Dependence on displacement rate of radiation-induced changes in microstructure and tensile properties of AISI 304 and 316, 9: 10232 (R;US)
STAINLESS STEEL-316L
Corrosion
Corrosion test plan to guide canister material selection and design for a tuff repository, 9: 10246 (R;US)
Corrosion Resistance
Studies of materials for molten salt nuclear applications, 9: 9789 (R;FR)
Fatigue
Life prediction in low cycle fatigue using elastic analysis, 9: 10210 (R;FR)
STAINLESS STEEL-446
Chemical Composition
Materials performance at high temperatures and pressures in simulated coal gasification atmospheres, 9: 9245 (BA;US)
Materials performance in coal gasification environments, 9: 9246 (BA;US)

Corrosion
Erosion-corrosion of structural materials in a simulated coal gasification environment, 9: 9244 (BA;US)
Materials performance at high temperatures and pressures in simulated coal gasification atmospheres, 9: 9245 (BA;US)
Materials performance in coal gasification environments, 9: 9246 (BA;US)

Comparative Evaluations
Properties and performance of candidate structural metals for the production of synthetic gas from coal, 9: 9248 (BA;US)
Corrosion
Corrosion test plan to guide canister material selection and design for a tuff repository (SS317L), 9: 10246 (R;US)
Corrosion in H.E.-boilers and analysis of flue gas condensate, 9: 10466 (BA;US)
Long-term performance of materials used for high-level waste packaging. Second quarterly report, year two, July 1983-September 1983. Volume 2, 9: 9484 (R;US)
Nevada Nuclear Waste Storage Investigations. Quarterly report, April-June 1983, 9: 9486 (R;US)
Properties and performance of candidate structural metals for the production of synthetic gas from coal, 9: 9248 (BA;US)
Decontamination
Decontamination of transuranic contaminated metals by melt refining, 9: 9500 (J;US)
Erosion
Properties and performance of candidate structural metals for the production of synthetic gas from coal, 9: 9248 (BA;US)
Passivation
Surface enrichment of nitrogen during passivation of a highly resistant stainless steel, 9: 10254 (J;US)
Physical Radiation Effects
Swelling in several commercial alloys irradiated to very high neutron fluence, 9: 10228 (R;US)
Surface Treatments
Surface enrichment of nitrogen during passivation of a highly resistant stainless steel, 9: 10254 (J;US)
Swelling
Swelling in several commercial alloys irradiated to very high neutron fluence, 9: 10228 (R;US)
Ultrasonic Testing
Updating of actual technique for ultrasonic testing of austenitic stainless materials and welds, 9: 10440 (R;SE;In Swedish)

STAINLESS STEEL-Z2CN18-10
Carburization
Measurement of the activity coefficient of carbon in steels in liquid sodium, 9: 10225 (R;FR;In French)

STANDING CROP
See BIOMASS

STANFORD LINEAR COLLIDER
Beam Transport
Emittance growth in the collider arcs due to transverse wakefields, 9: 10495 (R;US)
Storage Rings
Damping ring rf system for SLAC, 9: 10566 (J;US)

STAR CLUSTERS
Stochastic Processes
Stochastic processes and the dynamics of massive black holes, 9: 10976 (R;SU)

STARFIRE TOKAMAK
Design
Steady-state tokamak reactor with non-divertor impurity control - STARFIRE, 9: 11351 (BA;GB)
Fuel Substitution
HYFIRE: a Tokamak - high-temperature electrolysis system, 9: 11353 (BA;GB)
Planning
Steady-state tokamak reactor with non-divertor impurity control - STARFIRE, 9: 11351 (BA;GB)
Radioactivation
Comparison of activation in STARFIRE and MARS first-walls, 9: 11293 (R;US)

START-UP (REACTOR)
See REACTOR START-UP

STATE GOVERNMENT
Environmental Policy
Radiological safety for particle accelerators: What part will the states play?, 9: 10489 (J;US)

STEAM
Liquefaction
Analysis of a process for converting biomass to diesel fuel, 9: 9539 (R;US)

STEAM COOLANT
See STEAM

STEAM GENERATORS
Computer Codes
Program for parameter studies of steam generators, 9: 9840 (R;SE;In Swedish)
Corrosion
Service behaviour of 1Kh2M steel in steam generator of BOR-60 reactor, 9: 10242 (R;SU;In Russian)
Eddy Current Testing
Multifrequency eddy current testing of helical tubes of steam generators, 9: 9818 (R;FR;In French)
Materials
Ferritic steels for French LMFBR steam generators, 9: 9817 (R;FR)
Mechanical Vibrations
Mechanical stresses of PWR steam generators and particularly of the bundle of U tubes, 9: 9782 (R;FR;In French)
Supports
Mechanical stresses of PWR steam generators and particularly of the bundle of U tubes, 9: 9782 (R;FR;In French)
Testing
Program for parameter studies of steam generators, 9: 9840 (R;SE;In Swedish)
Tubes
Study of methods for testing the tubes of steam generators by means of Eddy Current, 9: 9786 (R;SE;In Swedish)

STEEL INDUSTRY
See METAL INDUSTRY

STEEL-ASTM-A387
Gas Tungsten-Arc Welding
Evaluation of acoustic emission weld monitoring for coal gasification vessels. Final report, September 1979-March 1982, 9: 9222 (R;US)

STEELS
See also AUSTENITIC STEELS CARBON STEELS CHROMIUM STEELS FERRITIC STEELS STAINLESS STEELS STEEL-ASTM-A387
Cathodic Protection
Delamination of a fusion bonded epoxy coating from cathodically protected mild steel, 9: 9399 (BA;US)
Fundamental processes of cathodically protecting steel pipelines, 9: 9400 (BA;US)
Cooling
Variation in cooling rate in a 35 mm thick steel block using different cooling media, 9: 10205 (R;GB)
Decontamination
Decontamination of transuranic contaminated metals by melt refining, 9: 9500 (J;US)
Design
Use of phase transformations in the design of alloy steel, 9: 10239 (R;US)
Fatigue
Fatigue resistance and microstructure of experimental dual phase Fe/2Si/0.1C steel, 9: 10241 (R;US)
Hardness
Determination of Luders strains and flow properties in steels from hardness/microhardness tests, 9: 10253 (J;US)

Hydrogen Embrittlement
Long-term performance of materials used for high-level waste packaging. Second quarterly report, year two, July 1983-September 1983. Volume 2, 9: 9484 (R;US)
Mechanical Tests
Determination of Luders strains and flow properties in steels from hardness/microhardness tests, 9: 10253 (J;US)
Nondestructive Testing
Detection and performance of defects in aluminum coated steels, 9: 10206 (R;US)
Phase Transformations
Use of phase transformations in the design of alloy steel, 9: 10239 (R;US)
Physical Radiation Effects
Determination of Luders strains and flow properties in steels from hardness/microhardness tests, 9: 10253 (J;US)
Plasticity
Determination of Luders strains and flow properties in steels from hardness/microhardness tests, 9: 10253 (J;US)
Strains
Determination of Luders strains and flow properties in steels from hardness/microhardness tests, 9: 10253 (J;US)
Surface Coating
Delamination of a fusion bonded epoxy coating from cathodically protected mild steel, 9: 9399 (BA;US)
Tensile Properties
Determination of Luders strains and flow properties in steels from hardness/microhardness tests, 9: 10253 (J;US)

STELLARATORS
See also WENDELSTEIN-7 STELLARATOR
Magnetic Field Configurations
Analytic representation of three-dimensional stellarator field, 9: 11326 (R;US)
Magnetic Islands
Island formation and destruction of flux surfaces in three-dimensional MHD equilibria, 9: 11328 (R;US)
Reviews
Status of the Magnetic Fusion Energy Programme, 9: 11281 (R;US)
Stellarators - current status and future plans, 9: 11307 (RA;AU)

STELLITE 6
Chemical Composition
Materials performance at high temperatures and pressures in simulated coal gasification atmospheres, 9: 9245 (BA;US)
Corrosion
Materials performance at high temperatures and pressures in simulated coal gasification atmospheres, 9: 9245 (BA;US)

STEM CELLS
Labelling
Relationship between number of spleen colonies and ^{125}IdUrd incorporation into spleen and femur, 9: 10893 (J;US)

STIMULATED EMISSION DEVICES
See LASERS

STIRLING CYCLE
Computer Codes
A user oriented design system for Stirling cycle codes, 9: 10475 (J;US)
Computerized Simulation
A user oriented design system for Stirling cycle codes, 9: 10475 (J;US)
Information Dissemination
A user oriented design system for Stirling cycle codes, 9: 10475 (J;US)

STIRLING ENGINES
Computerized Simulation
Stirling analysis code validation using free-piston engine base line data (SEAMI code), 9: 10188 (J;US)
Design
A new, versatile Stirling energy conversion unit, 9: 10476 (J;US)
Free-piston Stirling engine, 9: 10474 (J;US)
Dynamics
Dynamic analysis of the fluidyne, 9: 10185 (J;US)
Heaters
Evaluation of CO_2 and CO dopants in hydrogen to reduce hydrogen permeation in the Stirling engine heater heat tube alloy CG-27 (36Ni-13Cr-5.5Mo-2.6Ti-1.7Al-bal Fe), 9: 10183 (R;US)
Performance
A new, versatile Stirling energy conversion unit, 9: 10476 (J;US)
Effects of pressure-drop correlations on Stirling engine predicted performance, 9: 10184 (J;US)
Performance Testing
Free-piston Stirling engine, 9: 10474 (J;US)
Power Generation
Free-Piston Stirling Engine: an advanced prime mover for advanced residential gas-fired equipment, 9: 10096 (BA;US)
Pressure Drop
Effects of pressure-drop correlations on Stirling engine predicted performance, 9: 10184 (J;US)
Research Programs
Automotive Stirling Engine Development Program Mod I Stirling engine development, 9: 10186 (J;US)
Size
Downsizing assessment of automotive Stirling engines, 9: 10182 (R;US)
Working Fluids
Stirling engines with controlled evaporation of a two-phase two-component working fluid, 9: 10187 (J;US)

STOKERS
Design
Use of the pot furnace for the prediction of stoker performance, 9: 9312 (BA;US)

STOODY
See STELLITE 6

STORAGE BATTERIES
See ELECTRIC BATTERIES

STORAGE BATTERIES (LEAD-ACID)
See LEAD-ACID BATTERIES

STORAGE RINGS
See also SPEAR
Beam Dynamics
Lie algebraic methods for particle tracking calculations, 9: 10494 (R;US)
Betatron Oscillations
Second order effects of a sextupolar field on betatron oscillations in a storage ring, 9: 10563 (R;FR)
Magnets
SURF-II upgrade features magnet and rf system enhancements, 9: 10565 (J;US)
Polarized Beams
Techniques for longitudinal polarisation in electron storage rings, 9: 10562 (R;FR)
Radiation Detectors
Technology of high luminosity detectors, 9: 10610 (R;US)
RF Systems
Damping ring rf system for SLAC, 9: 10566 (J;US)
Development of a high power rf system for the Daresbury SRS, 9: 10567 (J;US)
SURF-II upgrade features magnet and rf system enhancements, 9: 10565 (J;US)
Waveguides
Breakdown and resonance behavior of the SRS waveguide, 9: 10564 (J;US)

STORAGE (SPENT FUEL)
See SPENT FUEL STORAGE

STORAGE (WASTES)
See WASTE STORAGE

STORES
See COMMERCIAL BUILDINGS

STOVES
Design
Techniques for achieving more complete combustion in wood stoves, 9: 10468 (BA;US)
Fuel Consumption
Energy conservation aspects of cooking appliances, 9: 10106 (BA;US)
Thermal Efficiency
Commercial cooking equipment improvement. Volume 4. Effects of ventilation on equipment performance. Final report Jul 1982-Feb 1983, 9: 10077 (R;US)

Ventilation
Commercial cooking equipment improvement. Volume 4. Effects of ventilation on equipment performance. Final report Jul 1982-Feb 1983, 9: 10077 (R;US)

STRATEGIC PETROLEUM RESERVE
Drawdown
Alternative mechanisms for drawing down the Strategic Petroleum Reserve: forward-based markets compared with auction-only mechanisms, 9: 9338 (R;US)
International Cooperation
Stockpile coordination project. Harvard Energy Security Program. Final report (Response of other oil importers to USA SPR policy), 9: 10025 (R;US)
Program Management
Alternative mechanisms for drawing down the Strategic Petroleum Reserve: forward-based markets compared with auction-only mechanisms, 9: 9338 (R;US)
Office of Inspector General FY 1983 semiannual report, April 1, 1983-September 30, 1983, 9: 9967 (R;US)

STRAW
Uses
Straw as an alternative, 9: 9553 (RA;AT;In German)

STREAK PHOTOGRAPHY
Cameras
Development of soft x-ray streak cameras at Lawrence Livermore National Laboratory, 9: 11248 (R;US)

STREPTOCOCCUS
Genetic Mapping
Nucleotide sequence of DNA controlling expression of genes for maltosaccharide utilization in Streptococcus pneumoniae, 9: 10790 (J;NL)

STRONTIUM
Diffusion
Diffusion in crystalline rocks of some sorbing and nonsorbing species, 9: 9489 (R;SE)
Emission Spectroscopy
Inductively coupled plasma-atomic emission spectrometry (ICP-AES) in support of nuclear waste management, 9: 10311 (R;US)
PIXE Analysis
Large scale study of tooth enamel, 9: 10343 (J;US)
Rydberg States
High resolution studies of barium Rydberg states, 9: 11004 (R;NL)
Solubility
Incorporation of radionuclides in crystalline titanates, 9: 9511 (J;US)

STRONTIUM 77
Beta-Plus Decay
Decay of ^{77}Sr and level structure of ^{77}Rb, 9: 11129 (J;US)

STRONTIUM 90
Electrochemistry
Chemical behavior of long-lived radionuclides in the marine environment, 9: 10749 (R;US)
Environmental Transport
Radionuclide transport processes in terrestrial ecosystems, 9: 10720 (J;US)
Radioecological Concentration
Chemical behavior of long-lived radionuclides in the marine environment, 9: 10749 (R;US)
Standards for concentrations of radionuclides in soil: basis and implementation, 9: 11154 (RA;US)
Radionuclide Migration
Groundwater monitoring in the Savannah River Plant low-level waste burial ground: a summary and interpretation of the analytical data, 9: 9514 (R;US)

STRONTIUM FLUORIDES
Crystal Field
Study of new $4f^7$ levels of Eu^{2+} in CaF_2 and SrF_2 using two-photon absorption spectroscopy, 9: 10303 (J;US)

STRUCTURAL BUCKLING
See DEFORMATION

STRUCTURES (BUILDINGS)
See BUILDINGS

STUDSVIK R-2 REACTOR
See R-2 REACTOR

STYRENE
Chemical Reaction Kinetics
Coal liquefaction model studies: free radical chain decomposition of diphenylpropane, dibenzyl ether, and phenyl ether via β-scission reactions, 9: 9259 (J;US)

SU-5 GROUPS
Unified Gauge Models
Avoiding domain wall problem in SU(N) grand unified theories, 9: 11099 (R;XA)

SU-6 GROUPS
Unified Gauge Models
Avoiding domain wall problem in SU(N) grand unified theories, 9: 11099 (R;XA)

SUBBITUMINOUS COAL
Pyrolysis
Flash pyrolysis of oil shale with various gases, 9: 9417 (R;US)

SUBCRITICAL FLOW
See LAMINAR FLOW

SUBSIDENCE (GROUND)
See GROUND SUBSIDENCE

SUBURBS
See URBAN AREAS

SUGAR BEETS
Uses
Sugar industry - number 1 with biogasohol, 9: 9552 (RA;AT;In German)

SULFATES
Atmospheric Chemistry
Chemistry and visual impact of the plumes from the Four Corners Power Plant and San Manuel Copper smelter. Interim report 4 Apr 79-14 Jan 82, 9: 10669 (R;US)
Corrosive Effects
Corrosion in H.E.-boilers and analysis of flue gas condensate, 9: 10466 (BA;US)
Optical Properties
Chemistry and visual impact of the plumes from the Four Corners Power Plant and San Manuel Copper smelter. Interim report 4 Apr 79-14 Jan 82, 9: 10669 (R;US)

SULFHYDRYL COMPOUNDS
See THIOLS

SULFITES
Specific compounds should be indexed by coordination of a descriptor of the form (CATION) COMPOUNDS and the above anion descriptor.
Chemical Reactions
Thermal decomposition of sulfite, bisulfite, and disulfite solutions, 9: 9274 (BA;US)
Oxidation
Kinetics of the oxidation of bisulfite ion by oxygen, 9: 9276 (BA;US)

SULFONATES
For salts of sulfonic acids; for esters see SULFONIC ACID ESTERS.
Photochemistry
Photochemistry of 9,10-anthraquinone-2-sulfonate in solution. Part II. Effects of inorganic anions; quenching vs. radical formation at moderate and high anion concentrations, 9: 10378 (R;US)

SULFUR
Activation Analysis
Batch sulfurmeter installation and testing at the Paradise Coal Preparation Plant, 9: 9299 (R;US)
Laboratory and field acceptance performance of CONAC, 9: 9264 (R;US)
Chemical Reactions
Dealkylation of N,N-dimethylaniline with sulphur and hydrogen sulphide, 9: 10361 (J;GB)
Isotope Ratio
Genesis of Canadian uraniferous quartz-pebble conglomerate ores, 9: 9439 (RA;US)
Nuclear Reaction Analysis
Use of radiative neutron capture in determination of sulfur in coal, 9: 10320 (RA;CS;In Czech)
Targets
Preparation of thick sulfur targets, 9: 10515 (RA;DE;In German)

SULFUR 32 REACTIONS
Fission
Fission of polonium, osmium, and erbium composite systems, 9: 11136 (J;US)
SULFUR CARBIDES
See CARBON SULFIDES
SULFUR COMPOUNDS
See also CARBON OXYSULFIDE
SULFATES
SULFITES
Scrubbing
Coal-gas cleanup facility, 9: 9239 (J;US)
SULFUR DIOXIDE
Absorption Spectra
Differential optical absorption techniques for diagnostics of coal gasification. Technical progress report, October, November, December 1982, 9: 9260 (R;US)
Air Pollution Control
Flue gas desulfurization, 9: 9270 (B;US)
Atmospheric Chemistry
Chemistry and visual impact of the plumes from the Four Corners Power Plant and San Manuel Copper smelter. Interim report 4 Apr 79-14 Jan 82, 9: 10669 (R;US)
Biological Effects
Systematic studies of the effect of aggressive gases on sprucewood, 9: 10930 (R;DE;In German)
Ecological Concentration
Guidelines for monitoring indoor air quality. Research report, 9: 10670 (R;US)
Numerical diffusivity model and its application to fumigation processes, 9: 10666 (R;US)
Emission
Basic pollutant emissions and their statistics of two coal fired boilers, 9: 9765 (R;SE)
Environmental Transport
The flux of sulfur-containing gases to vegetation, 9: 10671 (J;GB)
Monitoring
Zero/span control of monitors used in the Danish national airquality measurement program, 9: 10659 (R;DK;In Danish)
Odor
Odour control by thermal incineration, 9: 10665 (R;US)
Optical Properties
Chemistry and visual impact of the plumes from the Four Corners Power Plant and San Manuel Copper smelter. Interim report 4 Apr 79-14 Jan 82, 9: 10669 (R;US)
Quantitative Chemical Analysis
Comparison of methods for measuring ambient concentrations of sulphur dioxide, 9: 10662 (R;US)
Removal
Evaluation of sodium thiosulfate additive on the performance of a spray tower (train 100) scrubber system using limestone slurry, May 5, 1982-August 17, 1982. Final report, 9: 9269 (R;US)
Sampling
Comparison of methods for measuring ambient concentrations of sulphur dioxide, 9: 10662 (R;US)
National survey of smoke and sulphur dioxide - quality control tests on the analysis of samples, 9: 10664 (R;US)
Sorption
Control of SO_2 emissions by dry sorbent injection, 9: 9277 (BA;US)
Standards
Benefits analysis of alternative secondary national ambient air quality standards for sulfur dioxide and total suspended particulates. Volume 1. Final report, 9: 10697 (R;US)
Benefits analysis of alternative secondary national ambient air quality standards for sulfur dioxide and total suspended particulates. Volume 2. Final report, 9: 10698 (R;US)
Benefits analysis of alternative secondary national ambient air quality standards for sulfur dioxide and total suspended particulates. Volume 4. Final report, 9: 10699 (R;US)
Benefits analysis of alternative secondary national ambient air quality standards for sulfur dioxide and total suspended particulates. Volume 5. Final report, 9: 10700 (R;US)
Benefits analysis of alternative secondary national ambient air quality standards for sulfur dioxide and total suspended particulates. Volume 6. Final report, 9: 10701 (R;US)
SULFUR HYDRIDES
See HYDROGEN SULFIDES
SULFUR IONS
Electron Capture
Dielectronic and radiative recombination of highly stripped sulfur ions incident on argon, 9: 11035 (J;US)
Ion Spectroscopy
Environmental influences on K x-rays from highly stripped sulfur ions traveling in solids, 9: 11151 (J;US)
Ion-Atom Collisions
Comparison of L x-ray spectra from multi-stripped ions in $P^+ + Ar$ and $S^+ + Ar$ gas collisions at 100 keV, 9: 11026 (J;US)
Dielectronic and radiative recombination of highly stripped sulfur ions incident on argon, 9: 11035 (J;US)
Interference effect in the impact parameter dependence of K-K charge transfer in slow S-Ar collisions, 9: 10994 (RA;DE;In German)
Interference effects in the quasimolecular K-radiation induced in collisions of hydrogenlike ions, 9: 10996 (RA;DE;In German)
Two accel/decel experiments: electron capture for 6 to 20 MeV S^{10-16+} on He and Ar and interference effects in MO K x-ray spectra for 5, 10, and 20 MeV Cl^{16+} on Ar, 9: 10989 (R;US)
X-Ray Spectra
Comparison of L x-ray spectra from multi-stripped ions in $P^+ + Ar$ and $S^+ + Ar$ gas collisions at 100 keV, 9: 11026 (J;US)
Environmental influences on K x-rays from highly stripped sulfur ions traveling in solids, 9: 11151 (J;US)
SULFUR METERS
Installation
Batch sulfurmeter installation and testing at the Paradise Coal Preparation Plant, 9: 9299 (R;US)
Performance Testing
Batch sulfurmeter installation and testing at the Paradise Coal Preparation Plant, 9: 9299 (R;US)
Start-Up
Batch sulfurmeter installation and testing at the Paradise Coal Preparation Plant, 9: 9299 (R;US)
SULFUR SULFIDES
See SULFUR
SUPER HIGH FREQUENCY RADIATION
See RADIOWAVE RADIATION
SUPER PHENIX REACTOR
Eddy Current Testing
Multifrequency eddy current testing of helical tubes of steam generators, 9: 9818 (R;FR;In French)
SUPERALLOYS
See HEAT RESISTING ALLOYS
SUPERCONDUCTING CABLES
Critical Current
Empirical scaling formulas for critical current and critical field for commercial NbTi, 9: 11263 (R;US)
Experimental parameter study of subsize Nb_3Sn cable-in-conduit conductors, 9: 10411 (J;US)
Critical Field
Empirical scaling formulas for critical current and critical field for commercial NbTi, 9: 11263 (R;US)
Critical Temperature
Empirical scaling formulas for critical current and critical field for commercial NbTi, 9: 11263 (R;US)
Scaling Laws
Empirical scaling formulas for critical current and critical field for commercial NbTi, 9: 11263 (R;US)
Testing
Experimental parameter study of subsize Nb_3Sn cable-in-conduit conductors, 9: 10411 (J;US)
SUPERCONDUCTING COMPOSITES
Superconductivity in filamentary eutectic composites. Final technical report, June 1, 1978-May 30, 1983, 9: 10400 (R;US)
SUPERCONDUCTING JUNCTIONS
Critical Field
Critical field of an SNS junction, 9: 10401 (R;US)

SUPERCONDUCTING MAGNETIC ENERGY STORAGE
Equipment Interfaces
30-MJ superconducting magnetic energy storage system for electric utility transmission stabilization, 9: 9942 (J;US)
SUPERCONDUCTING MAGNETS
Coolants
Radiation-induced electrical breakdown of helium in fusion reactor superconducting magnet systems, 9: 11339 (R;US)
Design
A 9.1-T iron-free Nb- Ti dipole magnet with pancake windings, 9: 10407 (J;US)
Parametric system studies of candidate TF coil system options for the Tokamak Fusion Core Experiment (TFCX), 9: 11272 (R;US)
Superconducting (radiation hardened) magnets for mirror fusion devices, 9: 11340 (R;US)
Performance Testing
A 9.1-T iron-free Nb- Ti dipole magnet with pancake windings, 9: 10407 (J;US)
Field quality aspects of CBA superconducting magnets, 9: 10526 (J;US)
Supports
Heat conduction thru supports between 300°K and 4°K, 9: 10404 (R;US)
SUPERCONDUCTING WIRES
AC Losses
Low frequency AC losses in multi filamentary superconductors up to 15 Tesla, 9: 10412 (J;US)
Aging
Metallurgical characterization of niobium/tin superconducting multifilamentary wires. Final report 1 Apr-31 Dec 1982, 9: 10202 (R;US)
Electrical Insulation
Enthalpy - improved dielectric insulation for superconducting wires. Final report Jun 1980-Mar 1982, 9: 10396 (R;US)
Metallurgy
Metallurgical characterization of niobium/tin superconducting multifilamentary wires. Final report 1 Apr-31 Dec 1982, 9: 10202 (R;US)
SUPERCONDUCTORS
Cryogenics
Stability of superconductors in helium I and helium II, 9: 10420 (B;FR)
Energy Gap
An analysis of evidence for superconducting energy gap and pairing interaction anisotropy for two types of experiments, 9: 10421 (BA;US)
Interactions
An analysis of evidence for superconducting energy gap and pairing interaction anisotropy for two types of experiments, 9: 10421 (BA;US)
Powder Metallurgy
Development of high performance superconductors by powder metallurgy, 9: 10262 (J;US)
Specific Heat
Low-temperature calorimeter for measuring heat capacity in magnetic fields up to 20 T, 9: 10293 (R;SU;In Russian)
Stability
Stability of superconductors in helium I and helium II, 9: 10420 (B;FR)
SUPERCRITICAL FLOW
See TURBULENT FLOW
SUPERGRAVITY
Symmetry
Symmetry in Kaluza-Klein theory, 9: 11167 (R;XA)
SUPERLATTICES
Electrical Properties
Structural and electronic properties of artificial metallic superlattices, 9: 10224 (R;US)
Sputtering
Structural and electronic properties of artificial metallic superlattices, 9: 10224 (R;US)
SUPERNOVAE
Cosmic Gases
Physical processes in young supernovae, 9: 10979 (R;SE;In Swedish)
Extreme Ultraviolet Radiation
Physical processes in young supernovae, 9: 10979 (R;SE;In Swedish)
Hydrodynamic Model
Type II successful supernovae, the anatomy of shocks: neutrino emission and the adiabatic index, 9: 10974 (R;US)
Shock Waves
Physical processes in young supernovae, 9: 10979 (R;SE;In Swedish)
Soft X Radiation
Physical processes in young supernovae, 9: 10979 (R;SE;In Swedish)
Stellar Winds
Physical processes in young supernovae, 9: 10979 (R;SE;In Swedish)
SUPERSYMMETRY
Symmetry Breaking
Broken supersymmetries in high energy physics, 9: 11084 (R;XA)
SUPERVOLTAGE RADIOTHERAPY
See RADIOTHERAPY
SUPPLY DISRUPTION
Simulation
Efficient simulation approach for evaluating the potential effects of nuclear power plant shutdowns on electrical utility generating systems, 9: 9971 (R;US)
SURFACE AIR
Gamma Spectroscopy
Gamma source concentration in atmosphere, 9: 10689 (RA;CS;In Slovak)
Radionuclide Migration
Radionuclide transport processes in terrestrial ecosystems, 9: 10720 (J;US)
SURFACE COATING
Cathodic Protection
Present situation and future developments of corrosion protection coatings used by the gas industry in France - characteristics and evaluation of performances, 9: 9401 (BA;US;FR)
Comparative Evaluations
Present situation and future developments of corrosion protection coatings used by the gas industry in France - characteristics and evaluation of performances, 9: 9401 (BA;US;FR)
Failures
Delamination of a fusion bonded epoxy coating from cathodically protected mild steel, 9: 9399 (BA;US)
Present situation and future developments of corrosion protection coatings used by the gas industry in France - characteristics and evaluation of performances, 9: 9401 (BA;US;FR)
SURFACE CONTAMINATION
Safety Standards
Standards for concentrations of radionuclides in soil: basis and implementation, 9: 11154 (RA;US)
SURFACE MINING
Environmental Impacts
Illinois land report: Rice Lake Conservation Area. Volume 2. Comments and responses, appendices, references. Final report, 9: 10723 (R;US)
Land Reclamation
Illinois land report: Rice Lake Conservation Area. Volume 2. Comments and responses, appendices, references. Final report, 9: 10723 (R;US)
SURFACE WATERS
See also COASTAL WATERS
LAKES
SEAS
SWIMMING POOLS
WATER RESERVOIRS
Radiation Monitoring
Experience with gamma spectrometry of water and sediment samples in preoperational radioactivity monitoring, 9: 10751 (RA;CS;In Czech)
Radionuclide Migration
Radiological assessment. A textbook on environmental dose analysis, 9: 10691 (R;US)

Temperature Distribution
Principal nonseasonal modes of variation of global sea surface temperature, 9: 10972 (J;US)
Temperature Measurement
Investigations on the cooling of anthropogenically heated river water in special consideration of evaporation, 9: 10756 (B;DE;In German)
Thermal Pollution
Investigations on the cooling of anthropogenically heated river water in special consideration of evaporation, 9: 10756 (B;DE;In German)

SURFACE-ACTIVE AGENTS
See SURFACTANTS

SURFACE-EFFECT MACHINES
See AIR CUSHION VEHICLES

SURFACTANTS
Chemical Properties
Dispersants for oil spills clean-up operations at sea, on coastal waters and beaches, 9: 9343 (R;US)
Performance
Investigation of the effects of oil viscosity and water-in-oil emulsion formation on dispersant efficiency, 9: 9354 (R;US)
Observations on the aerial application of dispersant using dc-6b aircraft, Gulf of Campeche, Mexico, 9: 9351 (R;US)
Sprays
Studies on the use of helicopters for oil spill clearance, 9: 9344 (R;US)
Technology Assessment
Dispersants for oil spills clean-up operations at sea, on coastal waters and beaches, 9: 9343 (R;US)
Testing
Assessment of the mackay apparatus for testing oil-spill dispersants, 9: 9350 (R;US)
Weathering
Investigation of the effects of oil viscosity and water-in-oil emulsion formation on dispersant efficiency, 9: 9354 (R;US)

SURPLUS POWER
Power Transmission
Proposed Memorandum of Understanding between Bonneville Power Administration and Western Area Power Administration. Environmental assessment, 9: 10037 (R;US)
Sales
Issue backgrounder: surplus power, 9: 10035 (R;US)

SURRY POWER STATION UNIT-1
See SURRY-1 REACTOR

SURRY POWER STATION UNIT-2
See SURRY-2 REACTOR

SURRY-1 REACTOR
Reactor Accidents
CONTAIN calculations of severe accident sequences at the Surry Nuclear Power Plant, 9: 9914 (R;US)

SURRY-2 REACTOR
Reactor Accidents
CONTAIN calculations of severe accident sequences at the Surry Nuclear Power Plant, 9: 9914 (R;US)

SURRY-3 REACTOR
Reactor Accidents
CONTAIN calculations of severe accident sequences at the Surry Nuclear Power Plant, 9: 9914 (R;US)

SURRY-4 REACTOR
Reactor Accidents
CONTAIN calculations of severe accident sequences at the Surry Nuclear Power Plant, 9: 9914 (R;US)

SURVEILLANCE (RADIOACTIVITY)
See RADIATION MONITORING

SURVEY (RADIOACTIVITY)
See RADIATION MONITORING

SUSPENSIONS (FUEL)
See FUEL SLURRIES

SWEDEN
Radiation Monitoring
Measuring stations for gamma radiation - measured results 1982, 9: 10694 (R;SE;In Swedish, English)

SWEDISH REACTOR R-2
See R-2 REACTOR

SWIMMING POOLS
Solar Water Heating
Solar heated public outdoor swimming pools, 9: 9694 (R;SE;In Swedish)

SYNCHROPHASOTRONS
See SYNCHROTRONS

SYNCHROTRON RADIATION
Diffraction
Example of progress and future perspectives in X-ray synchrotron diffraction studies, 9: 10200 (R;DK)
Research Programs
Overview of United States synchrotron radiation facilities, 9: 10504 (R;US)

SYNCHROTRON RADIATION SOURCES
Electron Rings
NBS SURF 11: A small versatile synchrotron light source, 9: 10558 (J;US)

SYNCHROTRONS
See also CERN SPS SYNCHROTRON
FERMILAB ACCELERATOR
Betatron Oscillations
Simulation of betatron-synchrotron coupling, 9: 10493 (R;US)
Radiation Protection
The health physics program at the National Bureau of Standards LINAC, 9: 10555 (J;US)
RF Systems
A high-q ferrite-tuned cavity, 9: 10524 (J;US)

SYNOVIA
See BONE JOINTS

SYNROC
See SYNTHETIC ROCKS

SYNTHANE PROCESS
Materials Testing
Critical study of materials for synthetic gas quench systems, 9: 9243 (BA;US)

SYNTHESIS
See also PHOTOSYNTHESIS
Catalysts
Evaluation of the slurry methanol reactor, 9: 9546 (R;US)
Methanation
Methane from synthesis gas, 9: 9253 (BA;US)

SYNTHETIC FUELS
See also ALCOHOL FUELS
HYDROGEN FUELS
Economic Analysis
Analysis of a process for converting biomass to diesel fuel, 9: 9539 (R;US)
Market
Analysis of a process for converting biomass to diesel fuel, 9: 9539 (R;US)

SYNTHETIC ROCKS
Chemical Composition
Support for DOE program in mineral waste-form development, 9: 9493 (R;US)
Concentration Ratio
Determination of ferrous-ferric ratios in SYNROC nuclear waste form, 9: 9499 (J;US)
Phase Studies
Support for DOE program in mineral waste-form development, 9: 9493 (R;US)
Redox Reactions
Determination of ferrous-ferric ratios in SYNROC nuclear waste form, 9: 9499 (J;US)
Sintering
Support for DOE program in mineral waste-form development, 9: 9493 (R;US)

SYNTHINE PROCESS
See FISCHER-TROPSCH SYNTHESIS

SYSTEMS ANALYSIS
Used in the fields of technology research and management for problems such as the calculation of failure probabilities and for reliability studies of systems and components.
Mechanical Engineering Research Program. Quarterly progress report, April-June 1983, 9: 10441 (R;US)
Programming
Altering the application of the traditional systems lifecycle, 9: 11388 (R;US)

T

T CODES
M Codes
TRACMAB. A computer code to form part of the link between the codes TRAC and MABEL, 9: 9872 (R;GB)
TAILINGS
Solid residue separated in the preparation of various products.
See also MILL TAILINGS
Iron Ores
Fluorescent and X-ray diffraction analysis for industrial wastes of the Comandante Cedro Soto Alba plant, 9: 10316 (R;CU;In Spanish)
Phase Studies
Fluorescent and X-ray diffraction analysis for industrial wastes of the Comandante Cedro Soto Alba plant, 9: 10316 (R;CU;In Spanish)
Phase characterization of the residues of the plant Comandante Pedro Soto Alba, 9: 10315 (R;CU;In Spanish)
Water Removal
High moisture slurry tailings - final report, 9: 9992 (R;US)
TANDEM ELECTROSTATIC ACCELERATORS
Prior to February 1979,information was indexed to Van de Graaff Accelerators.
See also CRNL MP TANDEM ACCELERATOR
Tandem accelerators, 9: 10479 (RA;DE;In German)
Computerized Control Systems
Heavy ion acceleration at the Heidelberg Tandem postaccelerator combination, 9: 10545 (J;US)
Ion Beams
Heavy ion acceleration at the Heidelberg Tandem postaccelerator combination, 9: 10545 (J;US)
Uses
Radioisotope dating using an EN-tandem accelerator, 9: 10551 (J;US)
TANDEM MIRROR DEVICES
See TMR REACTORS
TMX DEVICES
TANDEM MIRROR TYPE REACTORS
See TMR REACTORS
TANKS
Design
Seismic response of the flexible fluid-tank systems - a numerical study, 9: 10418 (J;US)
Fabrication
Seamless collapsible fuel tanks. Final report Mar 1982-Mar 1983 on phase 2, 9: 10397 (R;US)
Failures
Seismic response of the flexible fluid-tank systems - a numerical study, 9: 10418 (J;US)
Materials Testing
Seamless collapsible fuel tanks. Final report Mar 1982-Mar 1983 on phase 2, 9: 10397 (R;US)
Seismic Effects
Seismic response of the flexible fluid-tank systems - a numerical study, 9: 10418 (J;US)
TANTALUM
Sputtering
Structural and electronic properties of artificial metallic superlattices, 9: 10224 (R;US)
Superlattices
Structural and electronic properties of artificial metallic superlattices, 9: 10224 (R;US)
TANTALUM 181 TARGET
Proton Reactions
Charge exchange (p,n) reactions to the isobaric analog states of high Z nuclei: 73< or =Z< or =92, 9: 11134 (J;US)
TANTALUM ALLOYS
Annealing
Intermetallic compound structure and phase transformations in zirconium based alloys during the annealing and under irradiation with the electron pulsed beam, 9: 10238 (RA;SU;In Russian)
Physical Radiation Effects
Intermetallic compound structure and phase transformations in zirconium based alloys during the annealing and under irradiation with the electron pulsed beam, 9: 10238 (RA;SU;In Russian)
TARGET CHAMBERS
Plastic Scintillation Detectors
Plastic box: a 4π detector for intermediate energy heavy ion physics, 9: 10609 (R;US)
Telescope Counters
Plastic box: a 4π detector for intermediate energy heavy ion physics, 9: 10609 (R;US)
TARGETS

Electrons
Convoy electrons from solids in coincidence with the final projectile charge state, 9: 11030 (J;US)
Fabrication
Preparation of self-supporting osmium targets, 9: 10514 (RA;DE;In German)
Preparation of thick sulfur targets, 9: 10515 (RA;DE;In German)
Production of isotopic targets and stripper foils, 9: 10513 (RA;DE;In German)
Projectiles
Convoy electrons from solids in coincidence with the final projectile charge state, 9: 11030 (J;US)
TAU LEPTONS
See TAU PARTICLES
TAU PARTICLES
Weak Particle Decay
Latest results from the MARK II at PEP, 9: 11059 (R;US)
TAUONS
See TAU PARTICLES
TAX LAWS
Economic Impact
CO_2 emission tax policy: a sensitivity analysis, 9: 9986 (R;US)
TEARING INSTABILITY
Instability Growth Rates
Measurement of electron cyclotron emission on the T.F.R. Tokamak. Application to the study of disruptions, 9: 11191 (R;FR;In French)
TECHNETIUM 99
Intestinal Absorption
Oral intake of radionuclides in the population. A review of biological factors of relevance for assessment of absorbed dose at long term waste storage, 9: 10847 (R;SE)
Removal
Trapping of gaseous fluoride emissions on solid sorbents, 9: 10650 (RA;US)
TEETH
Chemical Analysis
Large scale study of tooth enamel, 9: 10343 (J;US)
TELEMETRY
Fiber Optics
High performance fiber optic telemetry link for use in a space radiation simulator. Technical report, 9: 10625 (R;US)

TELESCOPE COUNTERS
Calibration
Investigating parameters of the "Elena-F" and "Electron" detectors for space research using the separated beam no. 530 of the ITEF accelerator, 9: 10585 (R;SU;In Russian)
Design
Plastic box: a 4π detector for intermediate energy heavy ion physics, 9: 10609 (R;US)
Operation
Plastic box: a 4π detector for intermediate energy heavy ion physics, 9: 10609 (R;US)
Si Semiconductor Detectors
Multicomponent telescope based on p-Si for spectrometry and identification of the charged medium energy particles, 9: 10604 (RA;SU;In Russian)
TEMPERATURE (0400-1000 K)
See HIGH TEMPERATURE
TEMPERATURE (BODY)
See BODY TEMPERATURE
TENNESSEE VALLEY AUTHORITY
Water Reservoirs
Operation of TVA reservoirs: annual 1980, 9: 9560 (R;US)
TERBIUM COMPOUNDS
Crystal Field
Paramagnetic resonance of Gd^{3+} as a probe of exchange and crystal-field effects in rare-earth-metal pnictides: Antiferromagnetic and diluted materials, 9: 10274 (J;US)
TERMINAL FACILITIES
Environmental Effects
Report to SOTEAG (Shetland Oil Terminal Environmental Advisory Group) on salt marsh monitoring around Sullom Voe in 1981, 9: 9347 (R;US)
TERRESTRIAL ECOSYSTEMS
Radioecology
Radionuclide transport processes in terrestrial ecosystems, 9: 10720 (J;US)
Radionuclide Migration
Radionuclide transport processes in terrestrial ecosystems, 9: 10720 (J;US)
TEST FACILITIES
Design
National RF Test Facility as a multipurpose development tool, 9: 11270 (R;US)
Test facility for relativistic beam pickups, 9: 10501 (J;US)
Operation
Test facility for relativistic beam pickups, 9: 10501 (J;US)
TETRAMETHYLTETRASELENAFULVALENE
See TMTSF
TEXAS
Natural Gas Deposits
A case study of the Wilcox (Lobo) trend in Webb and Zapata counties, Texas, 9: 9375 (J;US)
A new approach to air-hole interpretation in the Canyon Sands of Central Texas, 9: 9360 (J;US)
TFR TOKAMAK
Cyclotron Radiation
Measurement of electron cyclotron emission on the T.F.R. Tokamak. Application to the study of disruptions, 9: 11191 (R;FR;In French)
Plasma Diagnostics
Measurement of electron cyclotron emission on the T.F.R. Tokamak. Application to the study of disruptions, 9: 11191 (R;FR;In French)
Tearing Instability
Measurement of electron cyclotron emission on the T.F.R. Tokamak. Application to the study of disruptions, 9: 11191 (R;FR;In French)
TFTR REACTORS
Operation
TFTR initial operations, 9: 11327 (R;US)
THERAPEUTIC AGENTS
See DRUGS
THERMAL EFFLUENTS
Biological Effects
Thermal effects on bluegill hematology. Final report, 9: 10914 (R;US)
Environmental Impacts
Assessment of potential impact of the Clinch River Breeder Reactor Plant thermal effluent on the Watts Bar Reservoir striped bass population, 9: 10755 (R;US)
THERMAL ENERGY STORAGE EQUIPMENT
Energy Efficiency Standards
An evaluation of ASHRAE Standard 94.2 for testing electrically charged thermal energy storage room-size units, 9: 9953 (J;US)
An evaluation of ASHRAE standard 94.2 for testing electrically charged thermal energy storage central units, 9: 9954 (J;US)
Performance Testing
An evaluation of ASHRAE Standard 94.2 for testing electrically charged thermal energy storage room-size units, 9: 9953 (J;US)
An evaluation of ASHRAE standard 94.2 for testing electrically charged thermal energy storage central units, 9: 9954 (J;US)
Test Facilities
An evaluation of ASHRAE Standard 94.2 for testing electrically charged thermal energy storage room-size units, 9: 9953 (J;US)
THERMAL ENVELOPE HOUSES
See DOUBLE ENVELOPE BUILDINGS
THERMAL INSULATION
Installation
Residential Conservation Service installer's guide, 9: 10082 (R;US)
Research Programs
Building envelope research utilization, 9: 10083 (J;US)
Technology Transfer
Building envelope research utilization, 9: 10083 (J;US)
THERMAL POLLUTION
Biological Effects
Study of radionuclides interaction with hydrophytocenosis. Part of a coordinated programme on isotopic-tracer-aided research and monitoring on agricultural residue-biological interactions in aquatic ecosystems. Final report for the period 1 January 1977 - 3 June 1982, 9: 10848 (R;XA)
THERMAL POLLUTION (AIR)
See AIR POLLUTION
THERMAL POLLUTION
THERMAL POLLUTION (WATER)
See THERMAL POLLUTION
WATER POLLUTION
THERMAL POWER PLANTS
See also FOSSIL-FUEL POWER PLANTS
GEOTHERMAL POWER PLANTS
NUCLEAR POWER PLANTS
SOLAR THERMAL POWER PLANTS
Baseline Ecology
Environmental effects of cooling-water discharge into the ocean, 9: 10754 (R;NZ)
Environmental Effects
Environmental effects of cooling-water discharge into the ocean, 9: 10754 (R;NZ)
THERMAL PROPERTIES
See THERMODYNAMIC PROPERTIES
THERMAL RADIATION
Measuring Methods
Radiation measurement in flames and furnaces, 9: 10394 (BA;US)
THERMAL REACTORS
See also ATR REACTOR
BRAIDWOOD-1 REACTOR
BRAIDWOOD-2 REACTOR
CANDU TYPE REACTORS
DRESDEN-1 REACTOR
HECTOR REACTOR
SAN ONOFRE-2 REACTOR
SURRY-1 REACTOR
SURRY-2 REACTOR
SURRY-3 REACTOR
SURRY-4 REACTOR
THREE MILE ISLAND-2 REACTOR
VHTR REACTOR
WNP-2 REACTOR
WOLF CREEK-1 REACTOR

Design
Thermal-power nuclear reactor (Patent), 9: 9830 (TG;US)
Radiation Accidents
Accidental releases of radionuclides: a preliminary study of the consequences of land contamination, 9: 10712 (R;GB)

THERMAL STORAGE
See HEAT STORAGE

THERMIONIC DIODES
Oscillation Modes
Negative resistance of double layers, 9: 10453 (R;SE)
Plasma Instability
Negative resistance of double layers, 9: 10453 (R;SE)

THERMODYNAMIC MODEL
Validation
Further validation of equilibrium thermodynamic speciation of uranium by analytical determination of anionic, cationic, and neutrally charged groups, 9: 10968 (R;US)

THERMODYNAMIC PROPERTIES
Computer Calculations
Enthalpy measurement of coal-derived liquids. Final report, April 1981-September 1983, 9: 9228 (R;US)
Correlations
Enthalpy measurement of coal-derived liquids. Final report, April 1981-September 1983, 9: 9228 (R;US)

THERMOLUMINESCENT DOSEMETERS
Sensitivity
Neutron sensitivity studies of LiF and $CaSO_4$ thermoluminescent detectors, 9: 10594 (R;HU;In Hungarian)

THERMOMETERS
Computerized Control Systems
Comparison of remotely acquired deep-body and subdermal temperature measurements for detecting fever in cattle, 9: 10771 (R;US)

THERMONUCLEAR DEVICES
Cylindrical Configuration
Linear tokamak-like experiment, 9: 11300 (RA;AU)
Energy Losses
Studies of neutral beam power loss in stray magnetic fields, 9: 11349 (J;US)
Neutral Beam Sources
Studies of neutral beam power loss in stray magnetic fields, 9: 11349 (J;US)

THERMONUCLEAR FUELS
Development of target capsules for muon catalyzed fusion experiments, 9: 11289 (R;US)
Data Acquisition
Data-gathering methodology for modeling energy research development and demonstration, 9: 10003 (BA;US)
Research Programs
Data-gathering methodology for modeling energy research development and demonstration, 9: 10003 (BA;US)

THERMONUCLEAR REACTIONS
Development of target capsules for muon catalyzed fusion experiments, 9: 11289 (R;US)
Deuteron Reactions
Comeback of beam-fusion with gains ready for the hybrid reactor, 9: 11313 (RA;AU)
Ion Spectroscopy
Contributions to fusion research from studies of foil-excited heavy ion beams, 9: 11258 (J;US)

THERMONUCLEAR REACTOR COOLING SYSTEMS
Pressure Drop
Pressure drop considerations of a lithium cooled fusion breeder tokamak reactor blanket, 9: 11333 (R;US)

THERMONUCLEAR REACTOR MATERIALS
Physical Radiation Effects
Fusion-relevant basic radiation effects: theory and experiment, 9: 10219 (R;US)
Lithium shell effect and its impact on microscopy determinations of swelling behavior, 9: 10231 (R;US)
Research Programs
Special-purpose materials for magnetically confined fusion reactors. Fifth annual progress report, 9: 11283 (R;US)
Swelling
Lithium shell effect and its impact on microscopy determinations of swelling behavior, 9: 10231 (R;US)

THERMONUCLEAR REACTORS
For use in cases where certain aspects of either hypothetical or real thermonuclear reactors are discussed.
See also D-T REACTORS
LASER FUSION REACTORS
MAGNETIC MIRROR TYPE REACTORS
TOKAMAK TYPE REACTORS
Breeding Blankets
Blanket neutronics of a compact reversed-field pinch reactor, 9: 11345 (J;US)
Divertors
High flux energy and particle collection scheme for divertors, 9: 11354 (BA;GB)
Fires
Modeling of lithium and lithium-lead reactions in air using LITFIRE, 9: 11325 (R;US)
Inertial Confinement
Inertial confinement fusion reactor systems, 9: 11352 (BA;GB)
Information Needs
Nuclear data requirements for fusion reactors, 9: 11347 (J;US)
Materials
Determination of Luders strains and flow properties in steels from hardness/microhardness tests, 9: 10253 (J;US)
Plasma Beam Injection
Inertial confinement fusion reactor systems, 9: 11352 (BA;GB)
Power Generation
Exploiting the plasma for power production: feeding and breeding and energy-harvesting, 9: 11301 (RA;AU)
Radiation Protection
Techniques for radiation protection monitoring of personnel at fusion reactors, 9: 11329 (R;DD)
Risk Assessment
Risk assessment of computer-controlled safety systems for fusion reactors, 9: 11288 (R;US)
Safety
Risk assessment of computer-controlled safety systems for fusion reactors, 9: 11288 (R;US)
Technology Assessment
Technological requisites of the magnetic fusion energy programme, 9: 11280 (R;US)
Water Pollution
Some environmental aspects of fusion reactor waste: Potential environmental concentrations of relevant radionuclides in drinking water, 9: 9526 (RA;XA)

THERMONUCLEAR WEAPONS
See NUCLEAR WEAPONS

THERMOPLASTICS
Physical Radiation Effects
Radiation stability of plastics and rubbers, 9: 10286 (R;GB)

THETA PINCH
Turbulence
Study of turbulence of plasma of a rapid linear theta-pinch according to the Stark broadening of the spectral lines of deuterium, 9: 11251 (TG;US)

THIN-LAYER CHROMATOGRAPHY
Contribution to thin layer chromatography of radioactive materials, 9: 10334 (RA;CS;In Czech)

THIO COMPOUNDS
See ORGANIC SULFUR COMPOUNDS

THIOALCOHOLS
See THIOLS

THIOLS
Absorption Spectra
Differential optical absorption techniques for diagnostics of coal gasification. Technical progress report, October, November, December 1982, 9: 9260 (R;US)
Detection
Factors which can reduce the olfactory response to natural gas odorants (Tertiary butyl mercaptan, isopropyl mercaptan, dimethyl sulfides, tetrahydrothiophene, methyl ethyl sulfide), 9: 9364 (BA;US)
Environmental Transport
The flux of sulfur-containing gases to vegetation, 9: 10671 (J;GB)

THIOPHENE
Absorption Spectra
Differential optical absorption techniques for diagnostics of coal gasification. Technical progress report, October, November, December 1982, 9: 9260 (R;US)
THIOPHENES
See POLYCYCLIC SULFUR HETEROCYCLES
THORIANITE
Mineralogy
Thorianite from the Hogatza Placer, Alaska, 9: 9440 (RA;US)
THORIUM
Isotope Ratio
Genesis of Canadian uraniferous quartz-pebble conglomerate ores, 9: 9439 (RA;US)
Solubility
Incorporation of radionuclides in crystalline titanates, 9: 9511 (J;US)
THORIUM 230
Intestinal Absorption
Oral intake of radionuclides in the population. A review of biological factors of relevance for assessment of absorbed dose at long term waste storage, 9: 10847 (R;SE)
THORIUM 232 TARGET
Alpha Reactions
Complete and incomplete fusion in transition energy range, 9: 11137 (R;FR;In French)
Deuteron Reactions
Complete and incomplete fusion in transition energy range, 9: 11137 (R;FR;In French)
Proton Reactions
Charge exchange (p,n) reactions to the isobaric analog states of high Z nuclei: 73< or =Z< or =92, 9: 11134 (J;US)
Complete and incomplete fusion in transition energy range, 9: 11137 (R;FR;In French)
THORIUM BROMIDES
Crystal Field
Parametric analysis of the energy levels of U^{4+} in D/sub 2d/ and limiting D_2 sites in incommensurate $ThBr_4$, 9: 10273 (J;US)
Site-selective excitation of U^{4+} diluted in incommensurate $ThBr_4$, 9: 10272 (J;US)
THORIUM OXIDES
See also BRANNERITE
THORIANITE
ZIRCONOLITE
Isotope Ratio
Some aspects of Witwatersrand mineralization, with special reference to uranium minerals, 9: 9432 (RA;US)
Uranium mineralization of the Witwatersrand and Dominion Reef systems, 9: 9433 (RA;US)
THREE MILE ISLAND-2 REACTOR
Decontamination
Development of a promising filtration method for liquid clarification in nuclear facilities (For TMI-2 water, reprocessing dissolver solutions, $ZnBr_2$ shielding solutions), 9: 9879 (R;US)
Water decontamination process improvement tests and considerations, 9: 9940 (J;US)
Reactor Accidents
Technical Assistance and Advisory Group, report number 5. Volume 5, 9: 9887 (R;US)
Water Treatment
Water decontamination process improvement tests and considerations, 9: 9940 (J;US)
THYMUS
Autoradiography
Autoradiographically determined androgen localization in immunity organs of mice following irradiation, 9: 10873 (RA;CS;In Czech)
TIGHT SANDS
See SANDSTONES
TIME-OF-FLIGHT SPECTROMETERS
Resonators
Energy measurement using a resonator based time-of-flight system, 9: 10518 (J;US)
TIN
Activation Analysis
Trace element analysis of biological materials: Complementarity of PIXE and NAA, 9: 10342 (J;US)
PIXE Analysis
Trace element analysis of biological materials: Complementarity of PIXE and NAA, 9: 10342 (J;US)
TIN 116 TARGET
Alpha Reactions
Research on giant resonances at high excitation energy by alpha particle inelastic scattering, 9: 11122 (R;FR;In French)
Study of giant resonances at high excitation energy by alpha inelastic scattering, 9: 11123 (R;FR;In French)
TIN ALLOYS
See also ZIRCALOY
Annealing
Intermetallic compound structure and phase transformations in zirconium based alloys during the annealing and under irradiation with the electron pulsed beam, 9: 10238 (RA;SU;In Russian)
Physical Radiation Effects
Intermetallic compound structure and phase transformations in zirconium based alloys during the annealing and under irradiation with the electron pulsed beam, 9: 10238 (RA;SU;In Russian)
Point Defects
Cascade collision simulation and point defect configuration in the intermetallic compounds (Nb_3Sn, V_3Si, Nb_3SGe), 9: 10237 (RA;SU;In Russian)
TIN ISOTOPES
Argon 40 Reactions
Shell effects at high angular momentum, 9: 11131 (J;US)
TIN OXIDES
Deposition
Junction characteristics of indium tin oxide/indium phosphide solar cells, 9: 9650 (J;US)
TIN SULFIDES
Lattice Parameters
Structure of the oxygen point defect in $SnMo_6S_8$ and $PbMo_6S_8$, 9: 10302 (J;US)
Point Defects
Structure of the oxygen point defect in $SnMo_6S_8$ and $PbMo_6S_8$, 9: 10302 (J;US)
Transition Temperature
Structure of the oxygen point defect in $SnMo_6S_8$ and $PbMo_6S_8$, 9: 10302 (J;US)
TITANITE
Comparative Evaluations
Incorporation of radionuclides in crystalline titanates, 9: 9511 (J;US)
TITANIUM
Activation Analysis
Trace element analysis of biological materials: Complementarity of PIXE and NAA, 9: 10342 (J;US)
Corrosion
Long-term performance of materials used for high-level waste packaging. Second quarterly report, year two, July 1983-September 1983. Volume 2, 9: 9484 (R;US)
Crevice Corrosion
Technique for characterizing crevice corrosion under hydrothermal conditions, 9: 10207 (R;US)
Inner-Shell Ionization
K-shell ionization cross section for Ti, Fe, Cu, Zr, and Ag, 9: 11033 (J;US)
Ion-Atom Collisions
K-shell ionization cross section for Ti, Fe, Cu, Zr, and Ag, 9: 11033 (J;US)
PIXE Analysis
Trace element analysis of biological materials: Complementarity of PIXE and NAA, 9: 10342 (J;US)
TITANIUM 46 TARGET
Alpha Reactions
Folding model analysis of alpha-particle elastic scattering with a semirealistic density dependent effective interaction, 9: 11124 (R;US)

TITANIUM 48 TARGET
Alpha Reactions
Folding model analysis of alpha-particle elastic scattering with a semirealistic density dependent effective interaction, 9: 11124 (R;US)
TITANIUM 50 TARGET
Alpha Reactions
Folding model analysis of alpha-particle elastic scattering with a semirealistic density dependent effective interaction, 9: 11124 (R;US)
TITANIUM ALLOYS
Erbium Additions
Formation and thermal stability of an oxide dispersion in a rapidly solidified Ti-Er alloy, 9: 10255 (J;US)
Grain Refinement
Formation and thermal stability of an oxide dispersion in a rapidly solidified Ti-Er alloy, 9: 10255 (J;US)
Microstructure
Formation and thermal stability of an oxide dispersion in a rapidly solidified Ti-Er alloy, 9: 10255 (J;US)
Thermodynamic Properties
Formation and thermal stability of an oxide dispersion in a rapidly solidified Ti-Er alloy, 9: 10255 (J;US)
TITANIUM BORIDES
Shock Waves
X-ray line broadening studies on aluminum nitride, titanium carbide and titanium diboride modified by high pressure shock loading, 9: 10265 (R;US)
TITANIUM CARBIDES
Shock Waves
X-ray line broadening studies on aluminum nitride, titanium carbide and titanium diboride modified by high pressure shock loading, 9: 10265 (R;US)
TITANIUM HYDRIDES
Ambipolar Diffusion
Diffusion behavior in titanium-chromium hydrides, 9: 10279 (J;GB)
Laves Phases
Diffusion behavior in titanium-chromium hydrides, 9: 10279 (J;GB)
TITANIUM OXIDES
See also BRANNERITE
HOLLANDITE
ZIRCONOLITE
Activation Analysis
Use of MTA 1527-2000 automatic activation analyzer in determining SiO_2 and Al_2O_3 in kaolin and clay samples, 9: 10328 (RA;CS;In Czech)
Catalytic Effects
Promotion effects on the synthesis of higher alcohols. Fifth quarterly report, September 1983-November 1983, 9: 9547 (R;US)
TLD (DOSEMETERS)

VARENNES TOKAMAK
Alfven Waves
Magnetic probe measurements of torsional Alfven waves in tortus tokamak, 9: 11203 (RA;AU)
Ballooning Instability
Energetic particle stabilization of ballooning modes in tokamaks, 9: 11255 (J;US)
Stability of n = 1 internal modes in tokamaks, 9: 11234 (R;US)
Compact Torus
Results from the high-power, short duration Rotamak III experiment, 9: 11298 (RA;AU)
Results from the low-power, long-duration Rotamak IV experiment, 9: 11213 (RA;AU)
Rotamak approach to compact torus research, 9: 11297 (RA;AU)
Data Acquisition
Data acquisition and analysis on LT-4, 9: 11210 (RA;AU)
ECR Heating
Polarization studies in electron cyclotron heating experiments on the Versator II tokamak. Final report 25 Aug 1980 - 25 Aug 1981, 9: 11182 (R;US)
Ion Spectroscopy
Contributions to fusion research from studies of foil-excited heavy ion beams, 9: 11258 (J;US)
Kink Instability
Stability of n = 1 internal modes in tokamaks, 9: 11234 (R;US)
Michelson Interferometer
Spatially scanning submillimeter laser interferometer for a small tokamak, 9: 11195 (RA;AU)
Oscillators
Matching of wave launching structures to a high power oscillator, 9: 11221 (RA;AU)
Plasma Confinement
Heating and confinement in LT-4, 9: 11200 (RA;AU)
Plasma Disruption
MHD activity and disruptions in LT-4, 9: 11201 (RA;AU)
Plasma Heating
Heating and confinement in LT-4, 9: 11200 (RA;AU)
High power plasma wave experiments in TORTUS, 9: 11192 (RA;AU)
Plasma Instability
MHD activity and disruptions in LT-4, 9: 11201 (RA;AU)
Reviews
Tokamak - progress, problems and prospects, 9: 11299 (RA;AU)
Runaway Electrons
Observations of runaway electrons in the Tortus tokamak, 9: 11207 (RA;AU)
Runaway electrons and rational q(r) in LT-4, 9: 11202 (RA;AU)

Specifications
Varennes Tokamak, 9: 11296 (RA;CA)
Transport Theory
Preliminary semiempirical transport models, 9: 11232 (R;US)

Computerized Simulation
Catalog of selected heavy duty transport energy management models, December 1982-November 1983, 9: 10131 (R;US)
Energy Management
Catalog of selected heavy duty transport energy management models, December 1982-November 1983, 9: 10131 (R;US)
Mathematical Models
Catalog of selected heavy duty transport energy management models, December 1982-November 1983, 9: 10131 (R;US)
TRANSURANIUM ELEMENTS
See also PLUTONIUM
Isotope Ratio
Passive neutron counter for determination of transuranics in high gamma activity samples, 9: 10612 (R;US)
TRANSURANIUM WASTES
See ALPHA-BEARING WASTES
TREES
See also PINES
Physiology
Acid rain and tree physiology: an overview of some possible mechanisms of response, 9: 10918 (R;US)
Plant Growth
Production of nonconventional crops for methane feedstocks (Saw palmetto, castorbean, dogfennel, sida, pigweed, saltbush), 9: 9622 (BA;US)
Productivity
Production of nonconventional crops for methane feedstocks (Saw palmetto, castorbean, dogfennel, sida, pigweed, saltbush), 9: 9622 (BA;US)
TRIPLET PARTICLES
See QUARKS
TRITIATED COMPOUNDS
See TRITIUM COMPOUNDS
TRITICUM
See WHEAT
TRITIUM
Biochemistry
The distribution of tritium among the amino acids of proteins obtained from mice exposed to tritiated water, 9: 10892 (J;US)
Diffusion
Unusual isotope effects for diffusion in VH 0.50 and VT 0.50, 9: 10354 (J;US)
Environmental Transport
Radionuclide transport processes in terrestrial ecosyrtems, 9: 10720 (J;US)
Isotope Effects
Unusual isotope effects for diffusion in VH 0.50 and VT 0.50, 9: 10354 (J;US)
Muon Reactions
Experimental investigation of muon-catalyzed d-t fusion, 9: 11342 (J;US)
Release Limits
Accidental tritium release from solid breeding blankets, 9: 11287 (R;US)
TRITIUM COMPOUNDS
Metabolism
Radioassay for hydrogenase activity in viable cells and documentation of aerobic hydrogen-consuming bacteria living in extreme environments, 9: 10827 (J;US)
TROMBE WALLS
Cost
Specification/cost data base: residential retrofit, 9: 9705 (R;US)
Specifications
Specification/cost data base: residential retrofit, 9: 9705 (R;US)
TRONA
Sorptive Properties
Control of SO_2 emissions by dry sorbent injection, 9: 9277 (BA;US)
Volatility
Characterization of volatile organic components of Nahcoltie and Trona, 9: 9278 (BA;US)
TRU WASTES
See ALPHA-BEARING WASTES
TRUCKS
Exhaust Gases
Study of emissions from light-duty vehicles in Denver. Final report, 9: 10195 (R;US)
Fuel Cells
Fuel cell propulsion systems for small transportation vehicles, 9: 10051 (J;US)
Fuel Economy
Study of emissions from light-duty vehicles in Denver. Final report, 9: 10195 (R;US)
Propulsion Systems
Fuel cell propulsion systems for small transportation vehicles, 9: 10051 (J;US)
TRX-1
See REVERSE-FIELD PINCH
TRYPSIN
Code number 3.4.21.4.
Biological Radiation Effects
Trypsin inhibitory activity in blood and cervical mucus of sheep following chronic gamma irradiation, 9: 10877 (RA;CS;In Slovak)
TSL PROCESS
Yields
Heavy recycle solvent studies in two-stage coal liquefaction. Fifth technical progress report, June 11-September 10, 1983, 9: 9232 (R;US)
TUBES
For objects of tubular shape; not for DRIFT TUBES, ELECTRON TUBES or IMAGE STORAGE TUBES.
Bending
Bowing test of HTGR graphite sleeve - out of pile heating experiment, 9: 9808 (RA;US)
Creep
Study of creep collapse of tubes subject to external pressure at elevated temperature, 9: 9792 (RA;US)
Eddy Current Testing
Study of methods for testing the tubes of steam generators by means of Eddy Current, 9: 9786 (R;SE;In Swedish)
Mechanical Vibrations
Flow-induced vibration of steam generator tube bundles, 9: 9781 (R;FR;In French)
Stress Analysis
Inelastic stress analysis of the IHX tube sheet, 9: 9810 (RA;US)

Thermal Fatigue
Thermal fatigue of the T-pieces of feed water tubes, 9: 9776 (R;SE;In Swedish, English, German)
Welded Joints
Inspection from outside of weld bead on tubes by gamma absorptiometry, 9: 10435 (R;FR;In French)
TUBES (CONDUITS)
See PIPES
TUFF
Maturation
Studies of altered vitrophyre for the prediction of nuclear waste repository - induced thermal alteration at Yucca Mountain, Nevada, 9: 9481 (R;US)
Strains
Stresses and strains at Yucca Mountain from underground nuclear explosions, 9: 10967 (R;US)
Stresses
Stresses and strains at Yucca Mountain from underground nuclear explosions, 9: 10967 (R;US)
TUMOR CELLS
Biochemical Reaction Kinetics
Studies of cell kinetics in vital and necrotic tumor regions: Measurement of loss rate using ^{125}iododeoxyuridine, 9: 10784 (R;DE;In German)
TUMORS
See NEOPLASMS
TUNGSTEN
Ion-Atom Collisions
Fundamental aspects of laser and ion-beam interactions with solid surfaces, 9: 11002 (R;NL)
TURBINES

UNDERGROUND MINING
See also LONGWALL MINING
Dusts
Instruments and techniques for dynamic particle size measurement of coal dust. Open file report 1 Dec 76-30 Nov 80, 9: 9295 (R;US)
Permafrost
Fundamental investigations to analyse the strength parameters in the mining method with freezing stowing, 9: 10470 (R;DE;In German)
Rock Bursts
Rock burst prevention in the Ruhr mining with special regard to the destressing blasting, 9: 10471 (R;DE;In German)
Roof Bolts
Automated drilling and bolting, 9: 9296 (BA;US)
Safety Engineering
Automated drilling and bolting, 9: 9296 (BA;US)
Stress Relaxation
Rock burst prevention in the Ruhr mining with special regard to the destressing blasting, 9: 10471 (R;DE;In German)
UNDERGROUND SPACE
Ground Motion
Calculation of earth movements above cavern-like openings under consideration of the global volume convergence, 9: 10469 (R;DE;In German)
Mathematical Models
Calculation of earth movements above cavern-like openings under consideration of the global volume convergence, 9: 10469 (R;DE;In German)

UNDERWATER OPERATIONS
Cutting Tools
Device for underwater cryogenic cutting, 9: 10414 (P;US)
UNIFIED GAUGE MODELS
See also WEINBERG-SALAM GAUGE MODEL
Coupling Constants
Broken supersymmetries in high energy physics, 9: 11084 (R;XA)
Domain Structure
No domain wall problem in SU(N) grand unified theory, 9: 11102 (R;XA)
Fermions
Fermion mass ratios and low energy grand unification, 9: 11104 (R;XA)
Higgs Bosons
Fermion mass ratios and low energy grand unification, 9: 11104 (R;XA)
P Invariance
Low mass-scale parity restoration in expanded gauge theories, 9: 11105 (R;XA)
Postulated Particles
Physics with 100-1000 TeV accelerators, 9: 11055 (R;XA)
Potentials
Finite temperature SU(2) gauge theory with external magnetic field, 9: 11095 (R;XA)
SU Groups
Precocious unification in simple GUTS, 9: 11100 (R;XA)
Supergravity
Spontaneous compactification of a (4+d)-dimensional Kaluza-Klein theory into M_4xG/H for arbitrary G and H, 9: 11094 (R;XA)
Supersymmetry
Broken supersymmetries in high energy physics, 9: 11084 (R;XA)
Physics with 100-1000 TeV accelerators, 9: 11055 (R;XA)
UNIFIED-FIELD THEORIES
Prior to April 1983, this concept was indexed by Einstein-Schroedinger Theory or Unified Gauge Models. For quantum field theory involving electromagnetic, weak and strong interactions see Grand Unified Theory.

Grain Size
Geochemical studies on the origin of the detrital pyrites in the conglomerates of the Witwatersrand Goldfields, South Africa, 9: 10969 (RA;US)
Isotope Ratio
Uranium mineralization of the Witwatersrand and Dominion Reef systems, 9: 9433 (RA;US)
Metamorphism
Geochemical studies on the origin of the detrital pyrites in the conglomerates of the Witwatersrand Goldfields, South Africa, 9: 10969 (RA;US)
Microanalysis
Microprobe analyses of uranium and thorium in uraninite from the Witwatersrand, South Africa, and Blind River, Ontario, Canada, 9: 9427 (RA;US)
Mineralogy
Some aspects of Witwatersrand mineralization, with special reference to uranium minerals, 9: 9432 (RA;US)
Origin
Microprobe analyses of uranium and thorium in uraninite from the Witwatersrand, South Africa, and Blind River, Ontario, Canada, 9: 9427 (RA;US)
Petrogenesis
Uraniferous constituents of the Witwatersrand conglomerates: ore-microscopic observations and implications for the Witwatersrand metallogeny, 9: 9430 (RA;US)
Stability
Radioactive disequilibria in mineralised drill core samples from the Bjoerklund uranium occurence, northern Sweden, 9: 9490 (R;SE)
URANIUM
See also ENRICHED URANIUM
Charge State
Projectile charge state dependence of M-shell ionization of Au, Pb, Bi and U by 1.42-MeV/amu fluorine ions, 9: 11027 (J;US)

Geochemistry
Further validation of equilibrium thermodynamic speciation of uranium by analytical determination of anionic, cationic, and neutrally charged groups, 9: 10968 (R;US)
Inner-Shell Ionization
Projectile charge state dependence of M-shell ionization of Au, Pb, Bi and U by 1.42-MeV/amu fluorine ions, 9: 11027 (J;US)
Ion-Atom Collisions
Projectile charge state dependence of M-shell ionization of Au, Pb, Bi and U by 1.42-MeV/amu fluorine ions, 9: 11027 (J;US)
Study of binding energies and electron densities in superheavy quasiatoms by means of delta-ray spectroscopy, 9: 11000 (RA;DE;In German)
Isotope Ratio
Genesis of Canadian uraniferous quartz-pebble conglomerate ores, 9: 9439 (RA;US)
Oxidation
Application of positron annihilation, electron paramagnetic resonance and thermogravimetric techniques to the study of uranium oxidation, 9: 10247 (R;US)
Radiation Absorption Analysis
Determination of uranium in solutions and absorbents by measuring soft gamma radiation absorption, 9: 10331 (RA;CS;In Czech)
Radioecological Concentration
Texas Panhandle soil-crop-beef food chain for uranium: a dynamic model validated by experimental data, 9: 10709 (RA;US)
Retention
Retention of uranium in the chest: implications of findings in vivo and postmortem, 9: 10896 (J;GB)
Solubility
Incorporation of radionuclides in crystalline titanates, 9: 9511 (J;US)

URANIUM 234
Environmental Exposure Pathway
Critical pathways of radionuclides to man from agro-ecosystems. Annual progress report, October 1981-September 1982, 9: 10713 (R;US)
Radioecological Concentration
Critical pathways of radionuclides to man from agro-ecosystems. Annual progress report, October 1981-September 1982, 9: 10713 (R;US)
Measured ^{234,238}U and fallout ^{239,240}Pu in human bone ash from Nepal and Australia: skeletal alpha dose, 9: 10898 (J;GB)
Root Absorption
Critical pathways of radionuclides to man from agro-ecosystems. Annual progress report, October 1981-September 1982, 9: 10713 (R;US)
Tissue Distribution
Critical pathways of radionuclides to man from agro-ecosystems. Annual progress report, October 1981-September 1982, 9: 10713 (R;US)

URANIUM 235
Environmental Exposure Pathway
Critical pathways of radionuclides to man from agro-ecosystems. Annual progress report, October 1981-September 1982, 9: 10713 (R;US)
Radioecological Concentration
Critical pathways of radionuclides to man from agro-ecosystems. Annual progress report, October 1981-September 1982, 9: 10713 (R;US)
Root Absorption
Critical pathways of radionuclides to man from agro-ecosystems. Annual progress report, October 1981-September 1982, 9: 10713 (R;US)
Tissue Distribution
Critical pathways of radionuclides to man from agro-ecosystems. Annual progress report, October 1981-September 1982, 9: 10713 (R;US)

URANIUM 235 TARGET
Neutron Reactions
Reevaluation of ENDL of σ(n,f) and anti nu/sub p/ for ^{235}U and ^{239}Pu from 100 keV to 20 MeV, 9: 11139 (R;US)

URANIUM 238
Environmental Exposure Pathway
Critical pathways of radionuclides to man from agro-ecosystems. Annual progress report, October 1981-September 1982, 9: 10713 (R;US)
Radioecological Concentration
Critical pathways of radionuclides to man from agro-ecosystems. Annual progress report, October 1981-September 1982, 9: 10713 (R;US)
Measured ^{234,238}U and fallout ^{239,240}Pu in human bone ash from Nepal and Australia: skeletal alpha dose, 9: 10898 (J;GB)
Root Absorption
Critical pathways of radionuclides to man from agro-ecosystems. Annual progress report, October 1981-September 1982, 9: 10713 (R;US)
Tissue Distribution
Critical pathways of radionuclides to man from agro-ecosystems. Annual progress report, October 1981-September 1982, 9: 10713 (R;US)

URANIUM 238 TARGET
Proton Reactions
Charge exchange (p,n) reactions to the isobaric analog states of high Z nuclei: 73< or =Z< or =92, 9: 11134 (J;US)

URANIUM ALLOYS
Fabrication
U-Si and U-Si-Al dispersion, fuel alloy development for research and test reactors, 9: 9444 (J;US)
Testing
U-Si and U-Si-Al dispersion, fuel alloy development for research and test reactors, 9: 9444 (J;US)

URANIUM COMPOUNDS
See also URANIUM OXIDES
Spectrophotometry
Recent developments in spectrophotometry with optical fibers for in situ measurement of uranium VI in solution, 9: 10309 (R;FR;In French)

URANIUM DEPOSITS
Age Estimation
Thoughts about uranium-bearing quartz-pebble conglomerates: a summary of ideas presented at the workshop, 9: 9442 (RA;US)
Alluvial Deposits
Examples that illustrate sedimentological aspects of the proterozoic placer model on the Kaap-Vaal Craton, Witwatersrand, South Africa, 9: 9424 (RA;US)
Carbon
Distribution and sedimentary arrangement of carbon in South African proterozoic placer deposits, 9: 10957 (RA;US)
Diagenesis
Thoughts about uranium-bearing quartz-pebble conglomerates: a summary of ideas presented at the workshop, 9: 9442 (RA;US)
Geologic History
Genesis of uranium- and gold-bearing Precambrian quartz-pebble conglomerates, 9: 9421 (R;US)
Microprobe analyses of uranium and thorium in uraninite from the Witwatersrand, South Africa, and Blind River, Ontario, Canada, 9: 9427 (RA;US)
Preliminary notes concerning the uranium-gold ratio and the gradient of heavy-mineral size distribution as factors of transport distance down the paleoslope of the Proterozoic Steyn Reef placer deposit, Orange Free State Goldfield, Witwatersrand, South Africa, 9: 9428 (RA;US)
Thoughts about uranium-bearing quartz-pebble conglomerates: a summary of ideas presented at the workshop, 9: 9442 (RA;US)
Geological Surveys
Uraniferous quartz-pebble conglomerates in South Africa, 9: 9423 (RA;US)
Grain Size
Preliminary notes concerning the uranium-gold ratio and the gradient of heavy-mineral size distribution as factors of transport distance down the paleoslope of the Proterozoic Steyn Reef placer deposit, Orange Free State Goldfield, Witwatersrand, South Africa, 9: 9428 (RA;US)

Meetings
Genesis of uranium- and gold-bearing Precambrian quartz-pebble conglomerates, 9: 9421 (R;US)
Metamorphism
Some aspects of Witwatersrand mineralization, with special reference to uranium minerals, 9: 9432 (RA;US)
Mineralization
Uranium mineralization of the Witwatersrand and Dominion Reef systems, 9: 9433 (RA;US)
Petrogenesis
Crossbedded nature of Proterozoic Witwatersrand placers in distal environments and a paleocurrent analysis of the Vaal Reef placer, 9: 9426 (RA;US)
Detrital uraninite and pyrite: are they evidence for a reducing atmosphere, 9: 9434 (RA;US)
Dominion reef group, Western Transvaal, South Africa, 9: 9425 (RA;US)
Genesis of uranium- and gold-bearing Precambrian quartz-pebble conglomerates, 9: 9421 (R;US)
Genesis of Canadian uraniferous quartz-pebble conglomerate ores, 9: 9439 (RA;US)
Petrology
Blind River uranium deposits: the ores and their setting, 9: 9436 (RA;US)
Prospecting
Results of NURE detailed sampling in the Aiken County, South Carolina area. National Uranium Resource Evaluation program, 9: 9443 (R;US)
Stratigraphy
Crossbedded nature of Proterozoic Witwatersrand placers in distal environments and a paleocurrent analysis of the Vaal Reef placer, 9: 9426 (RA;US)
Dominion reef group, Western Transvaal, South Africa, 9: 9425 (RA;US)
Genesis of uranium- and gold-bearing Precambrian quartz-pebble conglomerates, 9: 9421 (R;US)
Temporal and other factors affecting deposition of uraniferous conglomerates, 9: 9438 (RA;US)
URANIUM DIOXIDE
Heating
Sustained UO_2 melts using the inductive ring susceptor technique, 9: 10278 (J;US)
Melting
Sustained UO_2 melts using the inductive ring susceptor technique, 9: 10278 (J;US)
URANIUM HEXAFLUORIDE
Impurities
Liquid-phase compositions from vapor-phase analyses. I. Thermodynamic properties at UF_6 and some of its potential impurities, 9: 10349 (R;US)
Removal
Trapping of gaseous fluoride emissions on solid sorbents, 9: 10650 (RA;US)
URANIUM II
See URANIUM 234
URANIUM IONS
Absorption Spectra
Site-selective excitation of U^{4+} diluted in incommensurate $ThBr_4$, 9: 10272 (J;US)
Energy Levels
Parametric analysis of the energy levels of U^{4+} in D/sub 2d/ and limiting D_2 sites in incommensurate $ThBr_4$, 9: 10273 (J;US)
Site-selective excitation of U^{4+} diluted in incommensurate $ThBr_4$, 9: 10272 (J;US)
URANIUM ISOTOPES
See also URANIUM 234
URANIUM 235
URANIUM 238
Isotope Ratio
Geochemical studies on the origin of the detrital pyrites in the conglomerates of the Witwatersrand Goldfields, South Africa, 9: 10969 (RA;US)
URANIUM MILLS
See FEED MATERIALS PLANTS
URANIUM MINERALS

THORIANITE
URANINITES
Biogeochemistry
Some metallogenic features of the Huronian and post-Huronian uraniferous conglomerates, 9: 9437 (RA;US)
Hydrothermal Synthesis
Examples of possible movement of gold in solution in the Witwatersrand, Ventersdorp, and Transvaal systems, 9: 10956 (RA;US)
Mineralogy
Geochemistry and morphology of mineral components from the fossil gold and uranium placers of the Witwatersand, 9: 9429 (RA;US)
Petrogenesis
Some aspects of the development of the Vaal Reef uranium-gold carbon seams, Witwatersrand sequence: organic geochemical and microbiological considerations, 9: 9431 (RA;US)
Scanning Electron Microscopy
Geochemistry and morphology of mineral components from the fossil gold and uranium placers of the Witwatersand, 9: 9429 (RA;US)
Sulfidation
Some metallogenic features of the Huronian and post-Huronian uraniferous conglomerates, 9: 9437 (RA;US)
X-Ray Diffraction
Geochemistry and morphology of mineral components from the fossil gold and uranium placers of the Witwatersand, 9: 9429 (RA;US)
URANIUM MINES
Radioactive Wastes
Management of radioactive waste from uranium mining and milling, 9: 9503 (BA;XA)
URANIUM ORES
Chemical Composition
Uranium in Precambrian Moeda Formation, Minas Gerais, Brazil, 9: 9435 (RA;US)
Mill Tailings
Tailings technology. Decommissioning and rehabilitation remedial action technology development, 9: 9505 (BA;XA)
Technology development effort of the uranium mill tailings remedial actions project, 9: 9506 (BA;XA)
Prospecting
Uranium in Precambrian Moeda Formation, Minas Gerais, Brazil, 9: 9435 (RA;US)
URANIUM OXIDES

WASTE WATER
Absorption Spectra
Differential optical absorption techniques for diagnostics of coal gasification. Technical progress report, October, November, December 1982, 9: 9260 (R;US)
Adsorption
Data base for the analysis of compositional characteristics of coal seams and macerals. Technical progress report, August 1982-January 1983, 9: 9261 (R;US)
Corrosive Effects
Corrosion of metals in coal liquefaction processes. Final report, 9: 9223 (R;US)
Evaporation
Vaporization and devolatilization of coal water sprays. Fifth quarterly report for the period ending November 11, 1983, 9: 9303 (R;US)
Heat Extraction
Extracting heat from and storing heat in ground and water. Method of inventory and statement of natural conditions, 9: 9948 (R;SE;In Swedish)
Heat Storage
Extracting heat from and storing heat in ground and water. Legal aspects, 9: 9949 (R;SE;In Swedish)
Molten Metal-Water Reactions
Results of scoping tests in corium-water thermal interactions in ex-vessel geometry, 9: 9921 (J;US)
Solar Refrigeration
Development of a high temperature solar powered water chiller. Phase III. Technical progress report, October 1, 1979-July 31, 1981, 9: 9700 (R;US)
Sprays
Vaporization and devolatilization of coal water sprays. Fifth quarterly report for the period ending November 11, 1983, 9: 9303 (R;US)
WATER COOLANT
See WATER
WATER COOLED REACTORS
See also ATR REACTOR
BWR TYPE REACTORS
ORPHEE REACTOR
PWR TYPE REACTORS
R-2 REACTOR
ECCS
Effect of interfacial shear and entrainment models on flooding predictions, 9: 9920 (J;US)
Fluid Flow
Effect of interfacial shear and entrainment models on flooding predictions, 9: 9920 (J;US)
Fuel Element Failure
Fracture behavior of high-burnup spent-fuel cladding, 9: 9845 (R;US)
Model for the iodine-induced strain rate sensitivity of Zircaloy fuel rod cladding, 9: 9850 (R;US)
Mechanical Vibrations
Flow-induced vibration for light water reactors. Program final report, 9: 9836 (R;US)
Pressure Vessels
LWR pressure vessel surveillance dosimetry improvement program. Quarterly progress report, January 1983-March 1983. Volume 1, 9: 9838 (R;US)
Two-Phase Flow
Parallel processing algorithms for hydrocodes on a computer with MIMD architecture (DENELCOR's HEP), 9: 9885 (R;US)
WATER HEATERS
See also SOLAR WATER HEATERS
Computerized Simulation
Computer simulation of pulsations in gas fired pulse combustion water heaters and prediction of their exhaust noise for single and dual combustion chamber designs, 9: 10112 (BA;US)
Design
Design and development of a condensing commercial water heater, 9: 10110 (BA;US)
Mathematical Models
Computer simulation of pulsations in gas fired pulse combustion water heaters and prediction of their exhaust noise for single and dual combustion chamber designs, 9: 10112 (BA;US)
Noise
Computer simulation of pulsations in gas fired pulse combustion water heaters and prediction of their exhaust noise for single and dual combustion chamber designs, 9: 10112 (BA;US)
Pulse Combustion
Computer simulation of pulsations in gas fired pulse combustion water heaters and prediction of their exhaust noise for single and dual combustion chamber designs, 9: 10112 (BA;US)
Development of pulse combustion water heaters, 9: 10111 (BA;US)
WATER HEATING
See also GEOTHERMAL WATER HEATING

SOLAR WATER HEATING
Energy Conservation
Analysis of conservation and renewable options for new single-family residences, 9: 10085 (J;US)
WATER MODERATOR
See WATER
WATER POLLUTION
Monitoring
Monitoring for organic contaminants in ground water, 9: 10734 (RA;US)
WATER POLLUTION CONTROL
Use this term for items that involve the removal or management of pollutants after they are formed by a source.
Cost
Costs and effects of environmental protection controls regulating US phosphate rock mining. Information circular, 9: 9991 (R;US)
Helicopters
Studies on the use of helicopters for oil spill clearance, 9: 9344 (R;US)
Pilot Plants
Onsite treatment of volatile organic compounds in groundwater, 9: 10739 (R;US)
WATER QUALITY
Monitoring
Environmental program at the MHD Coal Fired Flow Facility, 9: 10652 (RA;US)
WATER RESERVOIRS
Eutrophication
Limnological and ecological changes associated with reservoir aging, 9: 10736 (R;US)
Sediments
Reversible ion-exchange fixation of cesium-137 leading to mobilization from reservoir sediments, 9: 10753 (J;GB)
WATER RESOURCES
Management
Water transfers from agriculture to industry, 9: 9997 (R;US)
WATER UTILITIES
Occupational Safety
DVGW annual report '82, 9: 9989 (R;DE;In German)
WATER VAPOR
Absorption Spectra
Radiation measurement in flames and furnaces, 9: 10394 (BA;US)
Enthalpy
Thermodynamic properties of gaseous mixtures containing water, 9: 9412 (BA;US)
Isotope Ratio
Isotope characterization of the water vapour in the Amazon region. Final report for the period 1 August 1979 - 31 July 1982, 9: 10642 (R;XA)
WATER WELLS
Monitoring
Oak Ridge Y-12 Plant groundwater monitoring and assessment program, 9: 10735 (RA;US)
WATERBORNE PARTICLES
See PARTICULATES
WATERFLOODING
Additives
Retention of polyacrylamide by berea sandstone, baker dolomite, and sodium kaolinite during polymer flooding. Paper SPE 8981, 9: 9323 (R;US)
Bench-Scale Experiments
Retention of polyacrylamide by berea sandstone, baker dolomite, and sodium kaolinite during polymer flooding. Paper SPE 8981, 9: 9323 (R;US)
WATERSHEDS
Atmospheric Precipitations
Isotope characterization of the water vapour in the Amazon region. Final report for the period 1 August 1979 - 31 July 1982, 9: 10642 (R;XA)
WAVEGUIDES
Breakdown
Breakdown and resonance behavior of the SRS waveguide, 9: 10564 (J;US)
Mode Control
Higher order mode studies in accelerator waveguides, 9: 10486 (J;US)
WAVES (SHOCK)
See SHOCK WAVES
WAZ 16
See NICKEL BASE ALLOYS
WEAK BOSON
See INTERMEDIATE BOSONS
WEATHERING
Tendency to disintegrate or slack on exposure to weather.
Simulation
Modified soxhlet extractor for pedologic studies, 9: 10704 (J;US)
WEATHERIZATION
Health Hazards
Estimated health effects from a regionwide weatherization program, 9: 10934 (R;US)
WECS
See WIND TURBINES
WEEVILS
See BEETLES
WEINBERG-SALAM GAUGE MODEL
Electroweak interactions, 9: 11067 (R;US)
WELDED JOINTS
Gamma Radiography
Inspection from outside of weld bead on tubes by gamma absorptiometry, 9: 10435 (R;FR;In French)
Ultrasonic Testing
Updating of actual technique for ultrasonic testing of austenitic stainless materials and welds, 9: 10440 (R;SE;In Swedish)
WELDING
Meetings
Papers of the annual welding conference, 9: 10263 (B;DE;In German)
WELDS
See WELDED JOINTS
WELL CASINGS
Hydrodynamics
Unsteady-state pressure response due to production with a slotted liner completion, 9: 9329 (J;US)
Perforation
Unsteady-state pressure response due to production with a slotted liner completion, 9: 9329 (J;US)
WELL DRILLING
Technology Assessment
Needs in drilling technology research and development, 9: 9328 (R;US)
WELL STIMULATION
Evaluation
The Mancos Formation: an evaluation of the interaction of geological conditions, treatment characteristics and production (Colorado), 9: 9377 (J;US)
WENDELSTEIN-7 STELLARATOR
Research Programs
IPP: Annual report 1982, 9: 11348 (B;DE;In German)
WEST GERMANY
See FEDERAL REPUBLIC OF GERMANY
WEST VALLEY PROCESSING PLANT
Safety
Status of high-level waste solidification at West Valley, 9: 9502 (J;US)
WESTERN REGION
See FEDERAL REGION IX
WESTINGHOUSE GASIFICATION PROCESS
Materials Testing
Critical study of materials for synthetic gas quench systems, 9: 9243 (BA;US)
Performance of test materials in Westinghouse PDU fluid bed gasifier, 9: 9247 (BA;US)
Process Development Units
Performance of test materials in Westinghouse PDU fluid bed gasifier, 9: 9247 (BA;US)
WHEAT
Radionuclide Migration
Critical pathways of radionuclides to man from agro-ecosystems. Annual progress report, October 1981-September 1982, 9: 10713 (R;US)

WHOLE-BODY IRRADIATION
Dosimetry
Dosimetry with total body irradiation, 9: 10911 (B;NL;In Dutch)
Radiation Syndrome
Affecting mortality of whole-body gamma-irradiated Beagle dogs, 9: 10861 (RA;CS;In Czech)
WIDE GAP SPARK CHAMBERS
Energy Resolution
Possibility of improving the multilayered detector energy resolution, 9: 10579 (R;SU)
WIND
Hourly Variations
Characteristics of wind direction meander during onshore flow at a coastal site, 9: 10639 (R;US)
WIND ENERGY CONVERSION SYSTEMS
See WIND TURBINES
WIND GENERATORS
See WIND TURBINES
WIND LOADS
Data Analysis
Correlations of solar insolation and wind data for SOLMET stations, 9: 9586 (J;US)
Velocity
Correlations of solar insolation and wind data for SOLMET stations, 9: 9586 (J;US)
WIND POWER
Availability
Offshore wind power in Denmark, 9: 9751 (R;DK;In Danish)
Demonstration Programs
Midwest Appropriate Technology Small Grants Program project summaries, 9: 9977 (R;US)
Economic Analysis
Offshore wind power in Denmark, 9: 9751 (R;DK;In Danish)
WIND POWER PLANTS
Cost
Specification/cost data base: residential retrofit, 9: 9705 (R;US)
Offshore Sites
LDB-VAWT: Executive summary, 9: 9754 (R;SE)
Specifications
Specification/cost data base: residential retrofit, 9: 9705 (R;US)
WIND TURBINES
See also VERTICAL AXIS TURBINES
Aerodynamics
Investigation of the aerodynamics of horizontal-axis wind turbine rotors. Final technical report, 9: 9745 (R;US)
Airfoils
New theory for the conversion of solar-derived wind energy using oscillating cascades of airfoils. Final technical report, 9: 9753 (R;US)
Computerized Control Systems
WECS: load controlled pitch - variable load conversion to heat. Progress report No. 2, 9: 9749 (R;US)
Control Systems
WECS - load controlled pitch - variable load conversion to heat. Final report, 9: 9750 (R;US)
Data Analysis
Analysis of data from the Gedser wind turbine, 1977-1979, 9: 9747 (R;US)
Design
Offshore wind power in Denmark, 9: 9751 (R;DK;In Danish)
Electric Power
Analysis of data from the Gedser wind turbine, 1977-1979, 9: 9747 (R;US)
Interference
Television interference measurements near the MOD-2 WT array at Goodnoe Hills, Washington, 9: 9744 (R;US)
Mathematical Models
New theory for the conversion of solar-derived wind energy using oscillating cascades of airfoils. Final technical report, 9: 9753 (R;US)
Offshore Sites
Offshore wind power in Denmark, 9: 9751 (R;DK;In Danish)
Performance
Measurements on the Gedser wind mill, 1977-1979, 9: 9746 (R;US)
Research Programs
Mod-2 wind turbine development, 9: 9748 (R;US)
Sensible Heat Storage
WECS: load controlled pitch - variable load conversion to heat. Progress report No. 2, 9: 9749 (R;US)
Site Selection
Wind turbine parks. Analysis of sites (Denmark), 9: 9755 (R;DK;In Danish)
Systems Analysis
Strategy for optimization of wind energy systems, 9: 9752 (R;SE)
Water Heating
WECS - load controlled pitch - variable load conversion to heat. Final report, 9: 9750 (R;US)
Wind Loads
Blade- and rotor loads for VESTAS 15, 9: 9756 (R;DK;In Danish)
WINDOWS
Electrical Properties
Radiation-induced RF loss measurements and thermal stress calculations for ceramic windows, 9: 10267 (RA;US)
Installation
Residential Conservation Service installer's guide, 9: 10082 (R;US)
Monitoring
Infrared monitoring of gyrotron windows, 9: 11279 (R;US)
Thermal Stresses
Radiation-induced RF loss measurements and thermal stress calculations for ceramic windows, 9: 10267 (RA;US)
WIRE SPARK CHAMBERS
Spatial Resolution
Method of application of spark chambers with magnetostriction data output in arbitrary magnetic fields, 9: 10584 (R;SU;In Russian)
WIRES
See also SUPERCONDUCTING WIRES
Activation Analysis
Neutron activation analysis of resistance wires, 9: 10325 (RA;CS;In Czech)
WISCONSIN
Energy Policy
Midwest Appropriate Technology Small Grants Program project summaries, 9: 9977 (R;US)
Geologic History
Basal conglomerates and weathered zones in the Marquette Range Supergroup, Northern Peninsula of Michigan - Age, indications of atmospheric oxygen, and uranium potential, 9: 10958 (RA;US)
Geological Surveys
Basal conglomerates and weathered zones in the Marquette Range Supergroup, Northern Peninsula of Michigan - Age, indications of atmospheric oxygen, and uranium potential, 9: 10958 (RA;US)
WITWATERSRAND
Geologic History
Preliminary notes concerning the uranium-gold ratio and the gradient of heavy-mineral size distribution as factors of transport distance down the paleoslope of the Proterozoic Steyn Reef placer deposit, Orange Free State Goldfield, Witwatersrand, South Africa, 9: 9428 (RA;US)
Geological Surveys
Investigation of Witwatersrand uranium-bearing quartz-pebble conglomerates in 1944-1945, 9: 9422 (RA;US)
WNP-2 REACTOR
Washington Public Power Supply System Nuclear Project Number 2, previously known as Hanford-2 Reactor.
Reactor Safety
Safety evaluation report related to the operation of WPPSS Nuclear Project No. 2, (Docket No. 50-397). Supplement No. 4, 9: 9899 (R;US)
WOLF CREEK-1 REACTOR
Reactor Safety
Safety evaluation report related to the operation of Wolf Creek Generating Staton, Unit No. 1, (Docket No. STN 50-482). Supplement No. 4, 9: 9898 (R;US)
WOLFRAM
See TUNGSTEN

WOOD
Gasification
Solar gasification of carbonaceous materials, 9: 9541 (J;GB)
Solar Drying
Solar wood drying kiln, 9: 9701 (R;US)
Storage
Storing of saplings of Salix spp, 9: 9601 (R;SE;In Swedish)
Tensile Properties
Systematic studies of the effect of aggressive gases on sprucewood, 9: 10930 (R;DE;In German)
WOOD ALCOHOL
See METHANOL
WOOD BURNING APPLIANCES
Combustion Control
Techniques for achieving more complete combustion in wood stoves, 9: 10468 (BA;US)
Emission
Techniques for achieving more complete combustion in wood stoves, 9: 10468 (BA;US)
WOOD FUELS
Use of this term is limited to polcy, feasibility, and socio-economic studies. For wood properties use WOOD.
Renewable energy resource planning in Orange County: a summary of procedures used for renewable assessment. Piedmont Cresent Energy Project, 9: 10044 (R;US)
Market
Future for fuelwood on the Swedish wood market, 9: 10045 (R;SE;In Swedish)
Uses
Fuelwood as a source of energy in private forestry - the situation in 1979 and future potential, 9: 9614 (R;SE;In Swedish)
WOOD WASTES
Storage
Storing of saplings of Salix spp, 9: 9601 (R;SE;In Swedish)
WORKERS
See PERSONNEL
WORKING FLUIDS
Evaporation
Stirling engines with controlled evaporation of a two-phase two-component working fluid, 9: 10187 (J;US)
Two-Phase Flow
Stirling engines with controlled evaporation of a two-phase two-component working fluid, 9: 10187 (J;US)
WORKING (MATERIALS)
See MATERIALS WORKING
WYOMING
Natural Gas Deposits
State of the art hydraulic fracture stimulation treatment for a western tight sand reservoir, 9: 9382 (J;US)

X

X RADIATION
Holography
X-ray holographic microscopy experiments at the Brookhaven synchrotron light source, 9: 10628 (R;US)
XENON
Ion-Atom Collisions
K-shell excitation via K-L charge transfer in slow Kr-Kr and Xe-Xe collisions, 9: 10993 (RA;DE;In German)
XENON IONS
Ion-Atom Collisions
K-shell excitation via K-L charge transfer in slow Kr-Kr and Xe-Xe collisions, 9: 10993 (RA;DE;In German)
X-RAY DETECTION
Position Sensitive Detectors
Time-of-flight position-sensitive x-ray detection, 9: 10621 (J;US)
Time-of-Flight Method
Time-of-flight position-sensitive x-ray detection, 9: 10621 (J;US)
Transition Radiation Detectors
X-ray transition radiation detection using the thin converters, 9: 10578 (R;SU;In Russian)
X-RAY DIFFRACTION
Small Angle Scattering
Neutron and synchrotorn x-ray small angle scattering instruments for applications in biology at the Brookhaven National Laboratory, 9: 10627 (R;US)
X-RAY DIFFRACTOMETERS
Installation
Evaluation of the effect of coal cleaning on fugitive elements. Phase IV. Identification of mineral forms in coal. Quarterly progress report No. 2, September 1-November 30, 1983, 9: 9297 (R;US)
X-RAY FLUORESCENCE ANALYSIS
Corrections
Use of characteristic radiation backscattering in eliminating matrix effect in X-ray fluorescence analysis, 9: 10330 (RA;CS;In Slovak)
Uses
Potential for the application of nuclear techniques in selected developing countries in Africa, 9: 10960 (R;GB)
X-RAY RADIOGRAPHY
Digitizers
Device for direct digitized radiology of small objects, 9: 9835 (R;FR;In French)
X-RAY SOURCES
For cosmic sources of x radiation use COSMIC X-RAY SOURCES.
Linear Z Pinch Devices
ZAPP: An inexpensive versatile x-ray source, 9: 11257 (J;US)
Radiation Protection
The health physics program at the National Bureau of Standards LINAC, 9: 10555 (J;US)
X-RAY SPECTROMETERS
Counting Rates
X-ray spectrometers with semiconductor detectors operating under increased loadings, 9: 10602 (RA;SU;In Russian)
Energy Resolution
X-ray spectrometers with semiconductor detectors operating under increased loadings, 9: 10602 (RA;SU;In Russian)
Ge Semiconductor Detectors
X-ray spectrometers with semiconductor detectors operating under increased loadings, 9: 10602 (RA;SU;In Russian)
Li-Drifted Ge Detectors
Germanium spectrometers of X-ray and soft γ-radiation, 9: 10603 (RA;SU;In Russian)
Loading
X-ray spectrometers with semiconductor detectors operating under increased loadings, 9: 10602 (RA;SU;In Russian)
Nuclear Instrument Modules
Silicon detectors and modules for X-ray and soft γ-radiation spectrometry, 9: 10600 (RA;SU;In Russian)
Preamplifiers
X-ray spectrometers with semiconductor detectors operating under increased loadings, 9: 10602 (RA;SU;In Russian)
Semiconductor Detectors
Semiconductor X-ray spectrometers for electron probe devices, 9: 10605 (RA;SU;In Russian)
Si Semiconductor Detectors
Silicon detectors and modules for X-ray and soft γ-radiation spectrometry, 9: 10600 (RA;SU;In Russian)
X-ray spectrometers with semiconductor detectors operating under increased loadings, 9: 10602 (RA;SU;In Russian)
Specifications
Semiconductor X-ray spectrometers for electron probe devices, 9: 10605 (RA;SU;In Russian)
Surface Barrier Detectors
Germanium spectrometers of X-ray and soft γ-radiation, 9: 10603 (RA;SU;In Russian)
X-RAY SPECTROSCOPY
HgI2 Semiconductor Detectors
1984 State of the art of the technology of mercuric iodide x-ray and gamma radiation detectors, 9: 10580 (R;US)
XUV
See EXTREME ULTRAVIOLET RADIATION

Y

YANG-MILLS THEORY
Analytical Solution
Class of simple solutions of the SU(2) Yang-Mills equations, 9: 11101 (R;XA)
Gauge Invariance
Uniqueness of the SU(2) instanton, 9: 11106 (R;XA)
Instantons
Uniqueness of the SU(2) instanton, 9: 11106 (R;XA)
SU-2 Groups
Class of simple solutions of the SU(2) Yang-Mills equations, 9: 11101 (R;XA)
Symmetry Groups
Spontaneous compactification of a (4+d)-dimensional Kaluza-Klein theory into M_4xG/H for arbitrary G and H, 9: 11094 (R;XA)
YTTRIUM
Emission Spectroscopy
Inductively coupled plasma-atomic emission spectrometry (ICP-AES) in support of nuclear waste management, 9: 10311 (R;US)
Solubility
Incorporation of radionuclides in crystalline titanates, 9: 9511 (J;US)
YTTRIUM 90
Radioecological Concentration
Standards for concentrations of radionuclides in soil: basis and implementation, 9: 11154 (RA;US)
YTTRIUM ALUMINIUM GARNETS
See ALUMINIUM OXIDES
YTTRIUM ORES
Biogeochemistry
Uranium mineralization of the Witwatersrand and Dominion Reef systems, 9: 9433 (RA;US)
Chemical Composition
Uranium mineralization of the Witwatersrand and Dominion Reef systems, 9: 9433 (RA;US)

Z

Z PINCH DEVICES (LINEAR)
See LINEAR Z PINCH DEVICES
ZEA MAYS
See MAIZE
ZEOLITES
See also FAUJASITE
Crystallization
Studies of altered vitrophyre for the prediction of nuclear waste repository - induced thermal alteration at Yucca Mountain, Nevada, 9: 9481 (R;US)
ZET PINCH
See LONGITUDINAL PINCH
ZIMBABWE
Prior to October 1980 this concept was indexed to SOUTHERN RHODESIA.
Energy Policy
Zimbabwe - energy situation 1981/82, 9: 10029 (R;DE;In German)
Energy Supplies
Zimbabwe - energy situation 1981/82, 9: 10029 (R;DE;In German)
ZINC
Activation Analysis
Simultaneous determination of Cd, Cu, Mo, Zn in biological samples using neutron activation analysis combined with radiochemical separation, 9: 10322 (RA;CS;In Czech)
Trace element analysis of biological materials: Complementarity of PIXE and NAA, 9: 10342 (J;US)
Consumption Rates
Battery-related wastes in the UK (United Kingdom) and their disposal, 9: 10146 (R;US)
Crystallization
Electrodeposition of zinc on glassy carbon from $ZnCl_2$ and $ZnBr_2$ electrolytes, 9: 10373 (J;US)
Ecological Concentration
Concentration of heavy metals in water plants of some Austrian running waters, 9: 10932 (R;AT;In German.)
Electric Charges
Zinc electrode morphology in alkaline solutions, 9: 10372 (J;US)
Electrochemistry
Development of alkaline zinc/ferricyanide battery, 9: 9956 (J;US)
Zinc electrode morphology in alkaline solutions, 9: 10372 (J;US)
Electrodeposition
Electrodeposition of zinc on glassy carbon from $ZnCl_2$ and $ZnBr_2$ electrolytes, 9: 10373 (J;US)
Materials Recovery
Battery-related wastes in the UK (United Kingdom) and their disposal, 9: 10146 (R;US)
Morphology
Zinc electrode morphology in alkaline solutions, 9: 10372 (J;US)
PIXE Analysis
Large scale study of tooth enamel, 9: 10343 (J;US)
Trace element analysis of biological materials: Complementarity of PIXE and NAA, 9: 10342 (J;US)
Quantitative Chemical Analysis
Partitioning of copper among copper-binding proteins in the mussel Mytilus edulis exposed to soluble copper, 9: 10935 (R;US)
ZINC BROMIDES
Electrochemistry
Electrodeposition of zinc on glassy carbon from $ZnCl_2$ and $ZnBr_2$ electrolytes, 9: 10373 (J;US)
ZINC CHLORIDES
Electrochemistry
Electrodeposition of zinc on glassy carbon from $ZnCl_2$ and $ZnBr_2$ electrolytes, 9: 10373 (J;US)
ZINC COMPLEXES
Geochemistry
Temporal stability of chelated Co and Zn in reducing geochemical environments, 9: 9513 (J;US)
Stability
Temporal stability of chelated Co and Zn in reducing geochemical environments, 9: 9513 (J;US)
ZINC ISOTOPES
Isotope Separation
Mound activities in chemical and physical research: January-June 1983, 9: 9527 (R;US)
ZINC PHOSPHIDES
Electron Microprobe Analysis
Microanalysis of candidate thin & thick film photovoltaic materials, 9: 9624 (J;US)
Microstructure
Microanalysis of candidate thin & thick film photovoltaic materials, 9: 9624 (J;US)
Roughness
Microanalysis of candidate thin & thick film photovoltaic materials, 9: 9624 (J;US)
ZINC SULFIDES
Crystal Growth
Growth and characterization of single crystal (Cd, Zn)S thin films relevant to the study of the (Cd, Zn)S/Cu/sub x/S photovoltaic cell, 9: 9599 (R;US)
ZINC-BROMINE BATTERIES
Evaluation
Zinc/bromine prototype batteries evaluation, 9: 9961 (J;US)
Performance Testing
Zinc/bromine prototype batteries evaluation, 9: 9961 (J;US)
ZIRCALOY
For unspecified Zircaloy alloys.
See also ZIRCALOY 4
Physical Radiation Effects
Irradiation effects on zircaloy, 9: 10215 (R;FR;In French)

Stress Corrosion
Irradiation effects on zircaloy, 9: 10215 (R;FR;In French)
ZIRCALOY 4
Creep
Damaging by fatigue and creep of PWR fuel cans. Programme and work in progress (Zircaloy 4), 9: 10217 (R;FR;In French)
Fatigue
Damaging by fatigue and creep of PWR fuel cans. Programme and work in progress (Zircaloy 4), 9: 10217 (R;FR;In French)
ZIRCONIUM
Emission Spectroscopy
Inductively coupled plasma-atomic emission spectrometry (ICP-AES) in support of nuclear waste management, 9: 10311 (R;US)
Inner-Shell Ionization
K-shell ionization cross section for Ti, Fe, Cu, Zr, and Ag, 9: 11033 (J;US)
Ion-Atom Collisions
K-shell ionization cross section for Ti, Fe, Cu, Zr, and Ag, 9: 11033 (J;US)
ZIRCONIUM 84
Energy Levels
Observation of rigid nuclear rotation, 9: 11125 (J;US)
ZIRCONIUM 90 TARGET
Alpha Reactions
Folding model analysis of alpha-particle elastic scattering with a semirealistic density dependent effective interaction, 9: 11124 (R;US)
ZIRCONIUM 92 TARGET
Nickel 64 Reactions
Suppression of neutron emission after heavy-ion fusion: Is shape relaxation affected by a superdeformed minimum?, 9: 11132 (J;US)
ZIRCONIUM 95
Radioecological Concentration
Study of gamma-emitting radionuclides present in the sediments and algae of the "Baie de l'Orne" (Central Normandy Coast) collecting during the years 1980 - 1982, 9: 10752 (R;FR;In French)
ZIRCONIUM BASE ALLOYS
See also ZIRCALOY
Annealing
Intermetallic compound structure and phase transformations in zirconium based alloys during the annealing and under irradiation with the electron pulsed beam, 9: 10238 (RA;SU;In Russian)
Physical Radiation Effects
Intermetallic compound structure and phase transformations in zirconium based alloys during the annealing and under irradiation with the electron pulsed beam, 9: 10238 (RA;SU;In Russian)
ZIRCONIUM HYDRIDES
Stability
Mound activities in chemical and physical research: January-June 1983, 9: 9527 (R;US)
ZIRCONIUM ORES
Age Estimation
Some aspects of Witwatersrand mineralization, with special reference to uranium minerals, 9: 9432 (RA;US)
ZIRCONIUM OXIDES
See also ZIRCONOLITE
Fabrication
Fabrication of lithium ceramics by hot pressing, 9: 10266 (RA;US)
Specific Heat
Solid breeder thermal properties, 9: 10221 (RA;US)
Thermal Expansion
Solid breeder thermal properties, 9: 10221 (RA;US)
Thermodynamic Properties
Solid breeder thermal properties, 9: 10221 (RA;US)
ZIRCONOLITE
Comparative Evaluations
Incorporation of radionuclides in crystalline titanates, 9: 9511 (J;US)
ZONES (AURORAL)

ZOOPLANKTON
Spatial Distribution
Biological processes in the water column of the South Atlantic Bight. Progress report, June 1982-June 1984, 9: 10726 (R;US)
ZT-40 DEVICES
Magnet Coils
Poloidal field system design for the ZT-H reversed field pinch experiment, 9: 11318 (R;US)
Toroidal magnetic field system for a 2-MA reversed-field pinch experiment, 9: 11319 (R;US)
ZYMOMONAS MOBILIS
Growth
Kinetic study of ethanol production by Zymomonas mobilis, 9: 9558 (R;US)

CONTRACT NUMBER INDEX

Numbers assigned to DOE contracts under which documents announced in this publication were prepared are included in this index.

Contract No.	*Abstract No.*	*Report No.*
AB18-78FC02101	**Department of Chemistry, University of North Dakota, Grand Forks, ND 58202**	
	9:10361	Fuel 62 NO. 8. 913-915 (Aug 1983).
AC01-76ET10469	**Mitre Corp., McLean, VA (USA). METREK Div.**	
	9:10040	MTR—7518
AC01-76ET29191	**Westinghouse Research and Development Center, Pittsburgh, PA (USA)**	
	9:10450	DOE/ET/29191—T1
	Westinghouse Electric Corp., Pittsburgh, PA (USA). Research and Development Center	
	9:10451	DOE/ET/29191—T2
AC01-77EI08544	**Mathematica Policy Research, Inc., Washington, DC (USA)**	
	9:9978	DOE/EI/08544—T1
	9:9979	DOE/EI/08544—T2
	9:9980	DOE/EI/08544—T3
AC01-77ET29069	**General Electric Co., Schenectady, NY (USA). Electrical Systems and Technology Lab.**	
	9:10449	DOE/ET/29069—T2
AC01-78EI06448	**Oklahoma Univ., Norman (USA). Energy Resources Inst.**	
	9:9334	DOE/EI/06448—T2
	9:9335	DOE/EI/06448—T3
AC01-78ET29127	**Scientific Systems, Inc., Cambridge, MA (USA)**	
	9:9757	DOE/ET/29127—1
AC01-79CS30027	**Vitro Labs., Silver Spring, MD (USA)**	
	9:9707	SOLAR/1120—83/14
AC01-79ET13536	**GARD, Inc., Niles, IL (USA)**	
	9:9222	DOE/ET/13536—T2
AC01-79ET29365	**Purdue Univ., Lafayette, IN (USA)**	
	9:9758	DOE/ET/29365—4
	9:11371	DOE/ET/29365—2
AC01-79RA35008	**Synergic Resources Corp., Bala-Cynwyd, PA (USA)**	
	9:9320	DOE/RA/35008—T1
	9:9321	DOE/RA/35008—T2
AC01-80CS40321	**Policy Planning and Evaluation, Inc., McLean, VA (USA)**	
	9:10139	DOE/CS/40321—T1
AC01-80CS50093	**University of Miami, Dept. of Mechanical Engineering, Coral Gables, FL**	
	9:10178	Proceedings, Intersociety Energy Conversion Engineering Conference 2 536-542 (Aug 1983).
AC01-80CS50123	**Southwest Research Inst., San Antonio, TX (USA)**	
	9:10128	DOE/CS/50123—T1
	9:10129	DOE/CS/50123—T1(Exec.Summ.)

REPORT NUMBER INDEX

The numbers assigned to reports cited in this publication appear in the first column of the index. Cross reference information and/or availability are included as appropriate. Abbreviations used in the availability column are elaborated at the end of the index. To expedite the filling of orders for reports from NTIS and TIC, an order number in the form, DE82000001, appears in column 3. Requesters are urged to use this order number where provided. In column 4, one or more DOE distribution categories are indicated, e.g. , STD-10, MN-25. STD indicates distribution was made in full-size copy; MN indicates microcopy distribution. These category numbers are included to assist DOE librarians in responding to requests for reports in their collections. The UC (Unclassified Distribution Categories) are defined in DOE/TIC-4500, available from TIC. The citation numbers are given in column 5. NOTE: DOE attempts to disseminate its information as broadly as possible. Even though a report may contain some degree of illegibility, it is believed that the report may still make a contribution. The presence of a 1, 2, or 3 following NTIS in the availability column denotes the extent to which a report may be illegible and the form in which it is available: 1 = 1 to 5% illegibility, available PC and MF; 2 = 6 to 10% illegibility, available MF only; 3 = 11% or more illegibility, available PC only.

Abbreviations Used in Availability Column

EM Available in aperture card format only. Inquiries regarding the availability of these items should be addressed to USDOE-TIC, P.O. Box 62, Oak Ridge, Tennessee, 37831.

ETEC Available *only to requesters within the United States* from the Energy Technology Engineering Center, P.O. Box 1449, Canoga Park, California 91304.

GJO Available from DOE Grand Junction Office, P.O. Box 2567, Grand Junction, Colorado 81501.

GPO For sale by the Superintendent of Documents, Government Printing Office, Washington, D.C. 20402.

HMSO Her Majesty's Stationery Office, Atlantic House, Holborn Viaduct, London, England, EC1P 1BN.

NSO Available *only to requesters within the United States* from the Nuclear Standards Office, Oak Ridge National Laboratory, P.O. Box X, Oak Ridge, Tennessee 37831.

NTIS For sale by the National Technical Information Service (NTIS), U.S. Department of Commerce, Springfield, Virginia 22161. Price given is the domestic price for paper copy; prices for foreign purchasers are in most instances twice the domestic price.

TIC Available from the Technical Information Center, P.O. Box 62, Oak Ridge, Tennessee 37831.

NTIS NORTH AMERICAN PRICE CODES

Most NTIS products and services are now announced by price codes and, therefore, without specific prices in NTIS journals, newsletters and indexes.

The current dollar equivalent for each code is shown in the schedule below. Orders must list the accession number(s) and be accompanied by the total dollar amount from the current schedule.

NORTH AMERICAN CONTINENT PRICE SCHEDULE

Customers in Canada, United States, and Mexico please use this price schedule; other addressees, write for Folder PR-360-4.

CODES USED ON INDEX LINES

Following the citation numbers in the Corporate Author, Personal Author, and Subject Indexes, codes are used to designate the type of document, country of publication, and language of the document, e.g., (R:SU:In Russian). The language designator does not appear if the document is published in English.

ENGINEERING MATERIALS: A BIBLIOGRAPHY

ABOUT ENGINEERING MATERIALS: A BIBLIOGRAPHY
DOE/TIC-4628

Published by the
Technical Information Center
U.S. Department of Energy

1982

59 pages, 8½ by 11 in.
paper binding

The Engineering Materials Program, developed by the Department of Energy and its predecessor agencies through the Technical Information Center, makes available to the public such informational tools as drawings, specifications, design criteria, flow sheets, parts lists, bills of materials, photographs, and maps which are associated with equipment, instruments, processes, and facilities developed or investigated by agency contractors. These materials are grouped by sets, or packages, and each package is identified by a CAPE (Civilian Application Program—Engineering) number. A package may consist of information on many different but associated materials.

Engineering Materials: A Bibliography provides abstracting and indexing coverage of the 322 engineering materials packages that are included in the Department of Energy's Energy Data Base. The CAPE packages in this bibliography (DOE/TIC-4628) are arranged by the following categories: Coal and Coal Products; Nuclear Fuels; Isotope and Radiation Source Technology; Solar Energy; Wind Energy; Electric Power Engineering; Nuclear Reactor Technology; Energy Storage; Energy Conservation, Consumption, and Utilization; Materials; Chemistry; Engineering; Particle Accelerators; Instrumentation; Physics; Fusion Energy; and General and Miscellaneous. Corporate author, subject, and report number indexes are provided.

A forthcoming bibliography will announce more than 2400 other CAPE packages which were issued prior to 1975 but which are not included in the data base.

Available as Order No. DE82014444 (Report No. DOE/TIC-4628) for $10.00 from:

National Technical Information Service
U.S. Department of Commerce
Springfield, VA 22161

AVAILABILITY OF REFERENCES ABSTRACTED

REPORTS

Most reports abstracted in this publication may be obtained from

National Technical Information Service (NTIS)
5285 Port Royal Road
Springfield, VA 22161

or

DOE Technical Information Center (TIC)
P. O. Box 62
Oak Ridge, TN 37831
ATTN: Customer Services Division

Note: DOE offices and contractors should order from TIC; all others should order from NTIS. For more specific information on ordering, please note the introductory paragraph to the Report Number Index. For assistance in obtaining reports that do not have an Order No. (DE...) or other availability indicated in the citation or Report Number Index, contact TIC.

PATENTS

Although not cataloged as reports, patents cited from each country are listed in the Report Number Index under PATENTS-AU, PATENTS-FR, PATENTS-US, etc. U. S. Patent Applications, e.g., A 293,415, are available from NTIS.

NON-REPORT DOCUMENTS

Check the citation closely for the availability of such documents as journal articles, conference papers, books, and monographs. It may be necessary to request directly from the publisher or originator or to contact local, state, or university libraries or commercial reprint services.

Dissertations are available from University Microfilms International, Dissertation Copies, P. O. Box 1764, Ann Arbor, MI. Please request by Order No., e.g., DA82-11997.

OTHER

When GPO is cited as available source, order from Superintendent of Documents, Government Printing Office, Washington, D. C. 20402.

REPORT COLLECTIONS

The libraries listed below purchase and maintain microfiche collections of DOE and foreign reports. Most of these libraries have microfiche reader-printers or other photocopy facilities with which to reproduce enlarged copies from microfiche. Charges for reproduction services vary.

DOE/RECON SYSTEM

COMPUTER SEARCH SERVICE

DOE/RECON is an interactive on-line information retrieval system developed to provide rapid and easy access to energy-related data bases. The acronym RECON stands for REmote CONsole, which signifies that the system can be accessed by users located at various sites across the United States.

The system permits users to carry on a dialogue with the computer. This dialogue allows browsing through large data bases and can result in retrieval of citations which answer specific needs. Desired information can be selectively retrieved via simple yet powerful commands sent to the computer from the terminal keyboard.

Search logic may be formulated by the use of indexed terms, such as keywords, authors, categories, or corporate authors. As the search session progresses, AND, OR and NOT Boolean logic may be used to improve precision, i.e., the specificity of the retrieved set. For most data bases, the user may limit the scope of the search to particular years or volumes of data. Upon completion of a search, the user may choose to have the results displayed or printed at his/her terminal or to have the results printed and mailed the following day.

The DOE/RECON system is supported by dual IBM 370/3033 computers. Two IBM 3705 front-end communications computers are used to perform the message switching. Although most of the 40 data bases are bibliographic in content, DOE/RECON is not limited to this type; the Research in Progress (RIP) data base is one that is non-bibliographic. Presently, over 2 million references are available.

Requests for information concerning authorization to access the DOE/RECON system should be addressed to:
